Part 1 Striving to Open Up New Prospects for Chinese Modernization

Chapter 1 The Development Environment 2

Chapter 2 Guiding Principles 5

Chapter 3 Main Objectives 7

Part 2 Building a Modern Industrial System and Consolidating and Strengthening the Foundation of the Real Economy

Chapter 4 Optimizing and Upgrading Traditional Industries 11

Chapter 5 Cultivating and Expanding Emerging Industries and Future Industries 14

Chapter 6 Promoting High-Quality and Efficient Development of the Service Sector 18

Chapter 7 Building a Modern Infrastructure System 20

Part 3 Accelerating High-Level Self-Reliance in Science and Technology and Fostering New Quality Productive Forces

Chapter 8 Strengthening Original Innovation and Efforts to Make Breakthroughs in Core Technologies in Key Fields 28

Chapter 9 Enhancing Systematic Innovation Capacity 31

Chapter 10 Strengthening the Principal Role of Enterprises in Scientific and Technological Innovation 33

Chapter 11 Taking Integrated Steps to Develop Education, Science and Technology, and Human Resources 35

Part 4 Deepening the Building of Digital China and Raising the Level of Digital and Intelligent Development

Chapter 12 Strengthening the Efficient Supply of Computing Power, Algorithms and Data 37

Chapter 13 Fully Advancing Digital and Intelligent Technology Empowerment 39

Chapter 14 Fostering a Healthy and Orderly Development Ecosystem 42

Part 5 Building a Strong Domestic Market and Accelerating the Creation of a New Development Paradigm

Chapter 15 Vigorously Boosting Consumption 44

Chapter 16 Expanding Effective Investment 46

Chapter 17 Deepening the Building of a Unified National Market . . . 49

Part 6 Accelerating the Building of a High-Standard Socialist Market Economy and Strengthening the Driving Forces for High-Quality Development

Chapter 18 Fully Stimulating the Vitality of All Types of Business Entities 51

Chapter 19 Accelerating the Improvement of the Systems and Mechanisms for the Market-Based Allocation of Production Factors . . . 54

Chapter 20 Improving the Macroeconomic Governance System 56

Part 7 Expanding High-Level Opening Up and Opening New Prospects for Win-Win Cooperation

Chapter 21 Actively Expanding Self-Initiated Opening Up 59

Chapter 22 Improving the Quality and Level of Trade and Investment Cooperation 62

Chapter 23 High-Quality Belt and Road Cooperation 64

Chapter 24 Advancing the Building of a Community with a Shared Future for Mankind 66

Part 8 Accelerating Agricultural and Rural Modernization and Steadily Advancing Rural Revitalization in All Respects

Chapter 25 Enhancing Comprehensive Agricultural Production Capacity, Quality and Efficiency 68

Chapter 26 Building Beautiful and Harmonious Villages That Are Good Places to Live and Work 70

Chapter 27 Improving the Effectiveness of Policies for Strengthening Agriculture, Benefiting Farmers and Enriching Rural Residents . 73

Part 9 Improving the Regional Economic Layout and Promoting Coordinated Regional Development

Chapter 28 Enhancing the Coordination of Regional Development . . 75

Chapter 29 Promoting Interconnected Regional Development 78

Chapter 30 Improving the Territorial Space Development Pattern . . 79

Chapter 31 Deepening People-Centered New Urbanization 81

Chapter 32 Strengthening the Development, Utilization and Protection of the Sea 84

Part 10 Inspiring the Cultural Innovation and Creativity of the Whole Nation and Promoting the Flourishing of Socialist Culture

Chapter 33 Promoting and Practicing the Core Socialist Values 86

Chapter 34 Vigorously Developing Cultural Programs 88

Chapter 35 Accelerating the Development of Cultural Industries . . . 91

Chapter 36 Enhancing the Appeal and Influence of Chinese Civilization 92

Part 11 Improving the Population Development Strategy and Promoting High-Quality Population Development

Chapter 37 Building a Birth-Friendly Society 95

Chapter 38 Running Education That Satisfies the People 97

Chapter 39 Accelerating the Building of a Healthy China 100

Chapter 40 Actively Responding to Population Aging 104

Part 12 Strengthening Efforts to Ensure and Improve People's Wellbeing and Making Solid Progress Toward Common Prosperity for All

Chapter 41 Promoting High-Quality and Full Employment 106

Chapter 42 Improving the Income Distribution System 109

Chapter 43 Improving the Social Security System 111

Chapter 44 Promoting High-Quality Development of Real Estate . . . 112

Chapter 45 Steadily Advancing Equal Access to Basic Public Services 114

Chapter 46 Safeguarding the Development Rights and Interests of All Groups 115

Part 13 Accelerating the Comprehensive Green Transformation of Economic and Social Development and Building a Beautiful China

Chapter 47 Actively and Prudently Advancing and Achieving Carbon Peaking 118

Chapter 48 Continuing to Improve Environmental Quality 121

Chapter 49 Enhancing the Diversity, Stability and Sustainability of Ecosystems 124

Chapter 50 Accelerating the Formation of Green Modes of Production and Ways of Life 128

Part 14 Modernizing the National Security System and Capacity and Building a Peaceful China at a Higher Level

Chapter 51 Strengthening the National Security System and Capacity 130

Chapter 52 Safeguarding National Economic Security 131

Chapter 53 Improving the Level of Public Safety Governance 133

Chapter 54 Improving the Social Governance System 135

Part 15 Achieving the Centenary Goal of the People's Liberation Army on Schedule and Advancing National Defense and Military Modernization with High Quality

Chapter 55 Focusing on Improving the Quality and Efficiency of National Defense and Military Modernization 138

Chapter 56 Consolidating and Enhancing an Integrated National Strategic System and Capabilities 140

Part 16 Developing Whole-Process People's Democracy and Improving the Socialist Legal System with Chinese Characteristics

Chapter 57 Developing Socialist Democracy 141

Chapter 58 Advancing Law-Based Governance in All Respects 143

Part 17 Upholding and Improving "One Country, Two Systems" and Advancing National Reunification

Chapter 59 Promoting the Long-Term Prosperity and Stability of Hong Kong and Macao 144

Chapter 60 Promoting the Peaceful Development of Cross-Strait Relations and Advancing the Great Cause of National Reunification . 146

Part 18 Strengthening Guarantees for Plan Implementation

Chapter 61 Upholding and Strengthening the Centralized, Unified Leadership of the Party Central Committee 147

Chapter 62 Improving the Full-Cycle Mechanism for Plan Implementation 149

Outline of the 15th Five-Year Plan for National Economic and Social Development of the People's Republic of China

The Outline of the 15th Five-Year Plan (2026–2030) for National Economic and Social Development of the People's Republic of China has been formulated on the basis of the Recommendations of the CPC Central Committee on Formulating the 15th Five-Year Plan for National Economic and Social Development. It sets out the strategic intent of the state, defines the priorities of government work, and guides and regulates the conduct of the main actors in society. It is the grand blueprint for building a modern socialist country in all respects during the 15th Five-Year Plan period, and the programme of action shared by the Chinese people of all ethnic groups.

PART 1

Striving to Open Up New Prospects for Chinese Modernization

In the process of basically realizing socialist modernization, the 15th Five-Year Plan period plays an important role in building on past achievements and opening up the future and is a crucial period for consolidating the foundations and making an all-out effort. Unremitting and sustained efforts must be made to secure major breakthroughs in the strategic tasks that bear on the overall cause of Chinese modernization and to lay a still more solid foundation for basically realizing socialist modernization.

CHAPTER 1

The Development Environment

Standing at a new starting point, China has a still more solid foundation for development, while its development environment has undergone profound and complex changes, presenting new opportunities and challenges.

Section 1 Major Achievements in China's Development During the 14th Five-Year Plan Period

The 14th Five-Year Plan period was the opening and initial stage of the new journey to build a modern socialist country in all respects, and China's development during this period was truly extraordinary and remarkable. In the face of a complex and fluid international situation and the formidable and arduous tasks of advancing domestic reform, development and stability, the Party Central Committee with Comrade Xi Jinping at its core united and led the whole Party and the people of all ethnic groups in China in rising to the challenges and pressing forward with determination. They withstood the severe shock of the once-in-a-century pandemic, effectively responded to a series of major risks

and challenges, and drove new and major achievements in the cause of the Party and the country.

The guiding role of the new development philosophy has been fully demonstrated, important steps have been taken in building a new development paradigm, new quality productive forces have developed steadily, and high-quality development has been solidly advanced. The economy has maintained steady growth with progress: GDP has exceeded 140 trillion yuan; major progress has been made in building a modern industrial system; infrastructure support capacity has continued to improve; the added value of the core industries of the digital economy has accounted for more than 10.5%; and urban-rural and regional development has become more balanced and coordinated. Fruitful results have been achieved in scientific and technological innovation: R&D spending as a share of GDP has reached 2.8%; a number of major core technologies in key fields have been mastered; and a number of major original scientific and technological achievements have been made. Reform across the board has been further advanced; the institutions and mechanisms for implementing the "two unswervings" have been steadily improved; positive results have been achieved in building a unified national market; and the effectiveness of macroeconomic governance has been further enhanced. High-standard opening up has continued to expand; a new system for an open economy has taken shape at a faster pace; and high-quality "Belt and Road" cooperation has become deeper and more substantive. Whole-process people's democracy has developed in depth, and law-based governance in all respects has been effectively implemented. Cultural programs and cultural industries have flourished, and intellectual and cultural products have become rich and varied. Public wellbeing has been secured on a solid basis: per capita disposable income of residents has grown by 5.4% annually on average; new urban jobs have reached a cumulative total of 62.42 million; the average years of schooling for the working-age population has reached 11.3; average life expectancy has risen to over 79 years; and the outcomes of poverty alleviation have been consolidated and expanded. The green and low-carbon transition has accelerated, and the quality of the ecological environment has continued to improve: installed non-fossil energy power generation capacity has surpassed fossil energy capacity; the concentration of fine particulate matter (PM2.5) in cities at the prefecture level and above has fallen to 28 $\mu g/m^3$; the proportion of surface water at or better than Grade III has exceeded 90%; and forest coverage has exceeded 25%. China's national security capacity has been effectively enhanced; grain output has reached a new high of 1.4 trillion jin; social governance has become more effective; and the overall social situation has remained stable. Major progress has been made in national defense and military development. The practice of "One Country, Two Systems" has been advanced in depth. Major-country diplomacy with Chinese characteristics has been comprehensively expanded. Full and rigorous Party self-governance has produced marked results, the fight against corruption has been advanced in depth, and the Party's creativity, cohesion and fighting capacity have noticeably increased.

The main objectives and tasks of the 14th Five-Year Plan have been successfully completed; China's economic strength, scientific and technological strength, national defense strength and composite national strength have reached a new level; Chinese modernization has taken new and solid steps forward; and the new journey toward the Second Centenary Goal has gotten off to a good start. These major achievements are fundamen-

tally attributable to the Party Central Committee with Comrade Xi Jinping at its core charting the course and steering the ship, and to the scientific guidance of Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era; they are the result of the whole Party, the entire military and the people of all ethnic groups in China pooling their strength to tackle hard problems and working together in unity.

Section 2 Profound and Complex Changes Facing China's Development Environment During the 15th Five-Year Plan Period

Relations among major countries affect the international situation, and the evolution of the international situation profoundly impacts domestic development. China's development is in a period in which strategic opportunities coexist with risks and challenges and uncertain and unpredictable factors are increasing. Internationally, the once-in-a-century changes in the world are evolving at an accelerated pace, the international balance of power is undergoing profound adjustment, and a new round of scientific and technological revolution and industrial transformation is making accelerated breakthroughs; China has many favorable factors for proactively managing its international space and shaping its external environment. At the same time, the world is experiencing intertwined changes and turmoil and intensifying instability; geopolitical conflicts occur frequently and repeatedly; the global governance deficit is growing and security issues have become prominent; unilateralism and protectionism are on the rise and the threat of hegemonism and power politics has increased; the international economic and trade order faces severe challenges, and the momentum for world economic growth is insufficient with risks accumulating; and major-country competition is becoming more complex and intense, significantly increasing the uncertainty and instability of the external environment.

Domestically, China's economy has a stable foundation, many advantages, strong resilience and great potential; the supporting conditions and fundamental trend for long-term sound development have not changed; and the advantages of the socialist system with Chinese characteristics, of a super-large-scale market, of a complete industrial system and of abundant human resources have become more pronounced. At the same time, the problem of unbalanced and inadequate development remains prominent, and cyclical, structural and institutional problems are intertwined; effective demand is insufficient, the contradiction of strong supply and weak demand is acute, and there are bottlenecks and blockages in domestic circulation; the task of replacing old growth drivers with new ones is arduous; agricultural and rural modernization lags relatively behind; employment and household income growth face considerable pressure, and there are weak links in public wellbeing; demographic changes pose new issues for economic development and social governance; and risks and hidden dangers remain in key areas, with the onerous task of preventing and resolving risks in real estate, local government debt, small and medium-sized financial institutions and other areas.

Changes bring opportunities, and challenges inspire resolve. In the face of a shifting international landscape and various risks and challenges, it is essential to deeply understand the decisive significance of the "two establishments"; enhance the "Four Consciousnesses" and firm up the "Four Confidences"; ensure the "Two Upholds";

maintain strategic resolve and strengthen confidence in victory; proactively identify, respond to and seek change; be courageous and adept in struggle; be bold enough to face major tests of high winds and rough seas and even perilous storms; overcome difficulties, counter risks and meet challenges with a spirit of historical initiative; concentrate efforts on managing China's own affairs well; and take a coordinated approach with careful arrangements to consolidate and expand strengths, break through bottlenecks and constraints, and shore up weaknesses, so as to win strategic initiative in fierce international competition, respond to all kinds of uncertainty with the certainty of high-quality development, and write a new chapter in the two miracles of rapid economic development and long-term social stability.

CHAPTER 2

Guiding Principles

To advance economic and social development during the 15th Five-Year Plan period, it is imperative to firmly grasp the following guiding thought and major principles.

Section 1 The Guiding Thought

China will uphold Marxism-Leninism, Mao Zedong Thought, Deng Xiaoping Theory, the Theory of Three Represents, and the Scientific Outlook on Development; fully implement Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era; thoroughly implement the guiding principles of the 20th CPC National Congress and the successive plenary sessions of the 20th CPC Central Committee; and earnestly implement the arrangements of the Fourth Plenary Session. Centering on building a great modern socialist country in all respects, realizing the Second Centenary Goal, and advancing the great rejuvenation of the Chinese nation on all fronts through Chinese modernization, China will pursue coordinated progress in the "five-sphere integrated plan" and the "four-pronged comprehensive strategy," take into account both the domestic and international situations, fully, accurately and comprehensively implement the new development philosophy, accelerate the building of a new development paradigm, adhere to the general principle of seeking progress while maintaining stability, take economic development as the central task, take high-quality development as the theme, take reform and innovation as the fundamental driving force, take meeting the people's ever-growing needs for a better life as the fundamental purpose, and take full and rigorous Party self-governance as the fundamental guarantee. It will work to achieve effective qualitative improvement and reasonable quantitative growth of the economy, make solid progress in promoting well-rounded human development and common prosperity for all the people, and ensure decisive progress in basically realizing socialist modernization.

Section 2 Principles That Must Be Followed

— Upholding the Party's overall leadership. It is necessary to resolutely uphold the authority and centralized, unified leadership of the Party Central Committee; enhance the Party's ability to set the direction, devise the overall strategy, formulate policies and promote reform; embed Party leadership in all aspects and the entire process of economic and social development; and provide a fundamental guarantee for China's socialist modernization.

— Putting the people first. It is necessary to respect the principal position of the people, closely rely on the people, safeguard the people's fundamental interests and promote social fairness and justice; focus on ensuring and improving public wellbeing through development and on expanding development space in the course of meeting the people's livelihood needs; promote coordinated economic and social development and ensure that material and cultural-ethical advancement reinforce each other; and ensure that the fruits of modernization benefit all the people more fully and fairly.

— Pursuing high-quality development. It is necessary to guide development with the new development philosophy, develop new quality productive forces in light of local conditions, strengthen domestic circulation, smooth domestic and international dual circulation, take coordinated steps to expand domestic demand and deepen supply-side structural reform, accelerate the cultivation of new growth drivers, promote the optimization and upgrading of the economic structure, improve the quality of incremental growth and revitalize existing stock, and drive sustained and sound economic development and all-round social progress.

— Deepening reform across the board. It is necessary to focus on the institutional obstacles that constrain high-quality development, advance deeper-level reform, expand high-standard opening up, promote better alignment between the relations of production and the productive forces, between the superstructure and the economic base, and between national governance and social development, and continuously enhance the momentum for development and the vitality of society.

— Combining an effective market with a well-functioning government. It is necessary to give full play to the decisive role of the market in resource allocation and better play the role of the government, build a unified, open, competitive and orderly market system, develop a law-based and credit-based economy, create a world-class business environment that is market-oriented, law-based and internationalized, and foster an economic order that is both "dynamic" and "well-regulated."

— Pursuing development and security in a coordinated way. It is necessary to consolidate security through development and pursue development through security, strengthen worst-case thinking, effectively prevent and resolve all types of risks, enhance economic and social resilience, and safeguard a new development paradigm with a new security architecture.

CHAPTER 3

Main Objectives

The following objectives shall be achieved in economic and social development during the 15th Five-Year Plan period.

— Notable results will be achieved in high-quality development. On the basis of structural optimization and quality improvement, GDP growth will be kept within a reasonable range, with annual targets proposed as appropriate, so as to lay a solid foundation for doubling per capita GDP by 2035 compared with 2020 and reaching the level of a moderately developed country. Total factor productivity will rise steadily, and scientific and technological progress and institutional innovation will contribute an ever-greater share to economic growth. The household consumption rate will rise markedly; domestic demand will play an even stronger primary role in driving economic growth; and the potential of economic growth will be fully unleashed. The building of a unified national market will be advanced in depth, and the advantages of a super-large-scale market will continue to emerge. Major progress will be made in new industrialization, informatization, urbanization and agricultural modernization; the modern industrial system will become more complete, advanced and secure at a faster pace; urban-rural and regional development will become more coordinated; and major breakthroughs will be made in developing new quality productive forces, building a new development paradigm and establishing a modernized economic system.

— The level of self-reliance and self-strengthening in science and technology will rise substantially. The overall performance of the national innovation system will improve markedly; R&D spending will grow by more than 7% annually on average; and a pattern of integrated development of education, science and technology, and human resources will basically take shape. Basic research and original innovation capacity will be significantly strengthened; rapid breakthroughs will be made in core technologies in key fields; a number of major original, landmark and leading scientific and technological achievements will be produced; and the number of fields in which China is running abreast of or leading the world will increase noticeably. Scientific and technological innovation will be deeply integrated with industrial innovation, and the role of innovation-driven development will be markedly strengthened.

— New breakthroughs will be made in further deepening reform across the board. Modernization of China's governance system and capacity will be advanced in depth; the socialist market economy will be further improved; the institutions and mechanisms for high-standard opening up will be further refined; a fairer and more dynamic market environment will take shape at a faster pace; whole-process people's democracy will become more institutionalized, standardized and procedural; and the building of a socialist rule of law country will reach a higher level.

— The level of social civilization will rise markedly. Cultural confidence will be firmer;

the mainstream ideology and public opinion will be continuously consolidated and strengthened; the core socialist values will be widely practiced; the cultural innovation and creativity of the whole nation will be constantly stimulated; the people's intellectual and cultural lives will be richer; the cohesion of the Chinese nation and the influence of Chinese culture will be significantly enhanced; and the country's soft power will continue to increase.

— The quality of people's lives will improve steadily. Employment will remain generally stable, with the surveyed urban unemployment rate below 5.5%, and new progress will be made toward high-quality full employment. Personal income growth will keep pace with economic growth, and increases in labor remuneration will keep pace with increases in labor productivity; the distribution structure will be improved; and the middle-income group will continue to expand. The average years of schooling for the working-age population will rise to 11.7; the people's needs for elderly care and childcare services will be better met; average life expectancy will rise to 80 years; the social security system will be better optimized and more sustainable; and equal access to basic public services will improve markedly.

— New and major progress will be made in building a Beautiful China. Green production and lifestyles will basically take shape; the carbon peaking target will be met on schedule; CO2 emissions per unit of GDP will be reduced by 17%; and a clean, low-carbon, safe and efficient new energy system will be preliminarily established. The quality of the ecological environment will improve across the board; total emissions of major pollutants will continue to decrease; the concentration of fine particulate matter (PM2.5) in cities at the prefecture level and above will fall to below 27 μg/m^3; the proportion of water bodies with good-quality water will rise to 85%; forest coverage will reach 25.8%; and the diversity, stability and sustainability of ecosystems will continue to improve.

— The national security shield will be further consolidated. The national security system and capacity will be further strengthened; comprehensive grain production capacity will reach around 1.45 trillion jin; comprehensive energy production capacity will reach 5.8 billion tonnes of standard coal; risks in key areas will be effectively prevented and resolved; social governance and public security governance will improve markedly; major and especially serious accidents will be effectively curbed; the capacity to prevent natural disasters will be significantly enhanced; the centenary goal of the People's Liberation Army will be achieved on schedule; and the building of a Peaceful China at a higher level will be solidly advanced.

Building on this foundation, China will strive for another five years so that by 2035 its economic strength, scientific and technological strength, national defense strength, composite national strength and international influence will have risen substantially, per capita GDP will have reached the level of a moderately developed country, people's lives will be happier and better, and socialist modernization will have been basically realized.

Box 1 Main Indicators of Economic and Social Development in the 15th Five-Year Plan Period

Category	Indicator	2025	2030	Annual average/Cumulative	Attribute
Economic development	1. GDP growth (%)	5	—	Maintained within a reasonable range, with annual targets set as appropriate	Anticipatory
	2. Growth in overall labor productivity (%)	6.1	—	Higher than GDP growth	Anticipatory
	3. Urbanization rate of permanent residents (%)	67.9	71	—	Anticipatory
Innovation-driven development	4. Growth in total R&D spending (%)	9.1	—	> 7	Anticipatory
	5. High-value invention patents per 10,000 population (patents)	16	> 22	—	Anticipatory
	6. Value added of core industries of the digital economy as a share of GDP (%)	10.5*	12.5	—	Anticipatory
People's wellbeing	7. Surveyed urban unemployment rate (%)	5.2	—	< 5.5	Anticipatory
	8. Growth in per capita disposable income of residents (%)	5	—	Keep pace with GDP growth	Anticipatory
	9. Average years of schooling of the working-age population (years)	11.3	11.7	—	Binding
	10. Health workers per 1,000 population: practicing physicians (persons)	3.1	3.7	—	Anticipatory
	10. Health workers per 1,000 population: registered nurses (persons)	4.3	5.1	—	Anticipatory
	11. Share of nursing-type beds in elderly care institutions (%)	68	73	—	Anticipatory

continued

Category	Indicator	2025	2030	Annual average/Cumulative	Attribute
	12. Increase in the nursery enrollment rate of children under 3 (percentage points)	—	—	〔6〕	Anticipatory
	13. Average life expectancy (years)	79.25	80	—	Anticipatory
Green and low-carbon	14. Reduction in carbon dioxide emissions per unit of GDP (%)	〔17.7〕	—	〔17〕	Binding
	15. Share of non-fossil energy in total energy consumption (%)	21.7	25	—	Binding
	16. Concentration of fine particulate matter (PM2.5) in cities at the prefecture level and above (μg/m³)	28	< 27	—	Binding
	17. Share of water bodies of good quality (%)	80	85	—	Binding
	18. Forest coverage (%)	25.1*	25.8	—	Binding
Security safeguards	19. Comprehensive grain production capacity (trillion jin)	1.39	1.45 or so	—	Binding
	20. Comprehensive energy production capacity (100 million tonnes of standard coal)	51.3	58	—	Binding

Note: ① Figures in ( ) are five-year cumulative figures. ② Figures marked with * are 2024 data. ③ The growth rate of total R&D spending is calculated at constant prices. ④ Comprehensive grain production capacity refers to the grain output capacity that can be steadily achieved.

PART 2

Building a Modern Industrial System and Consolidating and Strengthening the Foundation of the Real Economy

China will continue to make the real economy the focus of its efforts to develop the economy, maintain the direction of intelligent, green and integrated development, accelerate the building of China into a manufacturing powerhouse, a quality powerhouse, a space powerhouse, a transport powerhouse and a cyber powerhouse, keep the proportion of manufacturing at a reasonable level, and build a modern industrial system with advanced manufacturing as its backbone.

CHAPTER 4

Optimizing and Upgrading Traditional Industries

China will strengthen the guiding role of national standards, the empowerment of digital, intelligent and green technologies, and the institutional constraints of environmental protection and safety, so as to consolidate and enhance the position and competitiveness of Chinese industries in the global division of labor.

Section 1 Raising the Quality and Upgrading of Key Industries

Adhering to the principle of guiding development in line with the situation and applying industry-specific policies, China will help key industries resolve structural problems and accelerate their upgrading toward the medium-high end. It will promote structural adjustment in the steel, petrochemical and shipbuilding industries, and strengthen and improve bases for quality steel products, first-class petrochemicals, and high-end ships and marine engineering equipment. It will advance innovation across the entire indus-

trial chain in electronic information and mechanical equipment, develop high-end and scarce products, and accelerate breakthroughs in key components, parts and special materials. It will expand the supply of high-quality products in light industry and textiles, and consolidate and enhance the competitiveness of the construction industry. It will promote technological transformation and upgrading, develop smart manufacturing, green manufacturing and service-oriented manufacturing, and accelerate changes in industrial models and forms of corporate organization. It will develop advanced manufacturing clusters and build national demonstration zones for new industrialization. It will strengthen total quality management, deepen implementation of the manufacturing excellence quality program, and enhance the capacity of the quality and technical infrastructure. It will promote the updating and upgrading of standards, exercise strict management over safety, environmental protection, energy efficiency and quality standards, facilitate market-based mergers and reorganizations, and ensure the orderly phase-out of backward and inefficient production capacity.

Section 2 Making Industrial and Supply Chains More Self-Reliant and Controllable

China will implement the industrial foundation re-engineering project to accelerate breakthroughs in a number of major basic technologies, processes and products, and advance innovative applications such as advanced materials and cross-scale manufacturing. It will implement a research program for major technical equipment and achieve breakthroughs in a number of landmark items of major technical equipment. It will carry out the high-quality development initiative for key manufacturing industrial chains on a rolling basis, establish and improve risk assessment and response mechanisms for the security of industrial and supply chains, continuously strengthen its competitive advantages in rare earths, rare metals and superhard materials, and strengthen the high-quality and efficient comprehensive utilization of important strategic minerals. It will advance the development of national strategic hinterlands and the backup of key industries, and build strategic industrial bases, material reserve bases and infrastructure. It will establish a survey system for the competitiveness of the industrial foundation and strengthen support for generic technology research and development. It will improve policies for the application of first-of-their-kind major technical equipment, first batches of new materials, and first editions of software.

Section 3 Improving Mechanisms for Promoting the Healthy and Orderly Development of Industries

China will improve the industrial regulation and policy system, optimize the industrial layout, and strengthen coordinated support for factors of production. It will improve the production capacity monitoring and early warning mechanism, and adopt measures such as planning guidance, capacity regulation, price governance and industry self-discipline to comprehensively address “involution-style” competition. It will promote the transformation of industrial policy toward inclusive and functional approaches, and improve mechanisms for the formulation and implementation, information disclosure, evaluation and adjustment, and withdrawal of industrial policies. It will improve the

tiered cultivation system for high-quality enterprises and promote the development of small and medium-sized enterprises as specialized, refined, distinctive and innovative (SRDI) enterprises. It will reasonably reduce the overall costs of manufacturing and increase support from medium- and long-term loans and credit loans for technological innovation, digital and intelligent transformation, and green development in manufacturing. It will implement the manufacturing talent support program and the knowledge renewal project for professional and technical personnel, and cultivate outstanding engineers, master craftsmen of the nation and highly skilled talent.

Box 2 Enhancing Industrial Foundations and Competitiveness

01 High-end New Materials

Accelerate innovative breakthroughs in high-end special steel, high-quality superalloys, ultra-high-purity metals, advanced ceramics, high-purity quartz materials, bio-based materials, advanced polymer materials, high-performance fibers and composites, and structure-function integrated materials; upgrade rare earth functional materials, rare metal materials, superhard materials, and lightweight high-strength alloys; and strengthen the research and application of frontier materials such as superconducting materials and metamaterials.

02 Basic Parts and Components

Accelerate breakthroughs in core basic parts such as high-speed precision bearings, high-parameter gears and transmission devices, high-reliability hydraulic and pneumatic seals, high-performance motors and control systems, and high-precision lead screws. Develop a range of advanced general-purpose basic components, including connection, sensing, functional material and optoelectronic types.

03 Basic Software and Industrial Software

Focus on basic software such as domestic operating systems, databases, middleware, programming languages and compilers, development and testing tools, and cloud computing software, as well as industrial software for R&D and design, production control, and operation and management, and promote technological breakthroughs and the application of results across the entire chain.

04 Industrial Mother Machines

Focus on developing high-end CNC machine tools and other processing equipment featuring high speed, high precision and integrated compound functions, and enhance the supporting capabilities of intelligent CNC systems, precision measurement and functional components.

05 High-end Instruments and Meters

Strengthen R&D on instruments and meters used in key industries such as online high-efficiency intelligent testing, extreme-environment regulation and control, and high-performance flow measurement, and advance breakthroughs in new metrology and calibration instruments such as quantum metrology and in-situ metrology instruments.

06 Major Technical Equipment

Advance the R&D, design and manufacture of large cruise ships, large liquefied natural gas carriers and other vessels, and the trial application of CR450 high-speed China-standard electric multiple units; promote the R&D and industrialization of large special smelting equipment, major petrochemical and chemical complete equipment, and special electronic equipment; accelerate breakthroughs in series gas turbines and high-head, large-capacity hydro-generator units; and promote the R&D and application of high-end intelligent agricultural machinery suited to hilly and mountainous areas.

CHAPTER 5

Cultivating and Expanding Emerging Industries and Future Industries

China will strengthen the supply of source technologies, accelerate the development of application scenarios and ecosystems, cultivate more pillar and pioneering industries, and create new strengths for industrial development.

Section 1 Developing and Expanding Emerging Industries

China will accelerate the development of strategic emerging industries such as next-generation information technology, new energy, new materials, intelligent connected new energy vehicles, robotics, biopharmaceuticals, high-end equipment and aerospace; build strategic emerging industry clusters with distinctive features and complementary strengths in light of local conditions; and focus on creating a number of emerging pillar industries with great growth potential, high technological content and wide application. It will expand space for the development of the marine economy and promote the healthy and orderly development of the low-altitude economy. It will carry out large-scale application demonstration initiatives for new technologies, new products and new scenarios, intensify the cultivation and opening of application scenarios, and accelerate the scaled development of emerging industries. It will encourage the development of strategic products and services, advance the scaled and serialized development of domestically produced large aircraft, strengthen innovative applications of the BeiDou Navigation Satellite System, make solid progress in technological innovation in key areas such as intelligent driving, new-type solar cells and new-type energy storage, and support the clinical use of innovative drugs.

Section 2 Making Forward-Looking Plans for Future Industries

Aiming at the key fields that will lead future development, China will build a whole-chain cultivation system for future industries and make quantum technology, biomanufacturing, hydrogen and fusion energy, brain-computer interfaces, embodied intelligence and sixth-generation mobile communications new growth points. It will strengthen the identification and dynamic adjustment of future industries and step up the layout of foundational, cutting-edge and disruptive technologies. It will establish mechanisms for increasing investment in future industries and sharing risks, organize and implement demonstration projects for future industry development, and explore diverse technological pathways, typical application scenarios, viable business models and market regulation rules. It will establish a number of national future industry research institutes and proof-of-concept centers, and build a number of future industry pilot zones in regions with outstanding scientific and educational resources and a strong industrial base.

Section 3 Improving the Ecosystem for Industrial Innovation and Development

China will strive to create a market environment and policy system conducive to the incubation and growth of emerging industries. It will implement industrial innovation projects, improve the organization models and evaluation systems for technological innovation in strategic products, and take an integrated approach to building innovation facilities, conducting technological research and development, and iterating and upgrading products. It will improve the intellectual property protection system for emerging fields, improve the public service system for intellectual property and the network of technology trading service platforms, and implement the standardization navigation project for new industries. It will cultivate unicorn enterprises. It will establish efficient and convenient market access mechanisms suited to the development of new forms of business and explore new regulatory approaches such as "sandbox regulation" and trigger-based regulation. It will make low-altitude airspace management more refined, strengthen airworthiness certification capacity, and enhance safety assurance for low-altitude flights. It will advance legislation in emerging fields such as biopharmaceuticals, intelligent driving and the low-altitude economy.

Box 3 Cultivation and Development of New Industries and New Tracks

01 Integrated Circuits

Refine mature-process nodes and enhance advanced-process manufacturing capabilities; accelerate the development of key equipment, materials and components; and develop high-performance processors and high-density memory. Accelerate the upgrading of the wide-bandgap semiconductor industry and promote the industrialization of ultra-wide-bandgap semiconductors such as gallium oxide and diamond. Advance breakthroughs in and the application of technologies such as computing-in-memory, 3D integration and optoelectronic convergence.

02 Embodied Intelligence

Make coordinated arrangements for embodied intelligence training grounds, ad-

vance collaborative training and evolution that integrates the virtual and the real, deepen research on physical AI, develop embodied models and algorithms integrating large and small brains, achieve breakthroughs in key technologies such as bodies and core components, and accelerate the upgrading and application of products in various forms, including humanoid robots.

03 Biomanufacturing

Achieve breakthroughs in key technologies such as enzyme preparations, intelligent design of biological germplasm and intelligent fermentation, and promote technological innovation and application in biological breeding, biochemicals, biopharmaceuticals and bioenergy. Accelerate the R&D and application of cell and gene therapy drugs, antibody drugs, nucleic acid drugs and radiopharmaceuticals, and enhance the capacity to research, produce and use emergency vaccines and drugs.

04 New-generation Batteries

Accelerate breakthroughs in key materials such as high-capacity electrode materials, high-conductivity electrolyte materials and composite current collectors; develop high-end manufacturing equipment and processes such as high-precision coating and high-speed stacking; and expand the application of high-safety, high-energy-density batteries in new intelligent terminals, new energy storage, electric transport and other fields.

05 Commercial Space

Advance breakthroughs in technologies such as high-power energy systems, general-purpose onboard computers and lightweight rocket structures, integrated rocket-satellite design, and reusable launch; enhance the large-scale production of rocket and satellite products and commercial space launch capacity. Strengthen the R&D and application of technologies such as active space defense and swarm intelligent control, and improve space situational awareness and risk prevention capabilities.

06 Domestically Produced Large Aircraft

Advance capacity expansion and supply chain development for the C919 aircraft; carry out the development and application of C919 plateau and other series variants, C909 derivatives and new-energy aircraft; and accelerate technological breakthroughs for the C929 aircraft and the verification and application of the Changjiang—1000A engine.

07 Low-altitude Equipment

Accelerate the development of new low-altitude equipment such as heavy-payload fixed-wing unmanned aerial vehicles and long-range vertical takeoff and landing aircraft; achieve breakthroughs in key technologies such as intelligent flight, electric propulsion and hybrid power systems; and strengthen breakthroughs in and the application of low-altitude operation management and low-cost unmanned aerial vehicle safety and control technologies and products.

08 Green Hydrogen

Improve the level of renewable energy hydrogen production equipment, accelerate breakthroughs in and verification of economical and safe large-scale hydrogen

storage and transport technologies, optimize the layout of hydrogen infrastructure, extend the green hydrogen industrial chain toward green ammonia and methanol and sustainable aviation fuels, and expand the application of hydrogen in transport, power, industry and other fields.

09 Brain-Computer Interfaces

Accelerate breakthroughs in key technologies such as basic software and hardware including new electrodes and dedicated chips, signal encoding and decoding algorithms, and Chinese language corpus databases, and promote the application of brain-computer interface products in brain disease diagnosis and treatment, motor rehabilitation therapy, health monitoring and other fields.

10 High-end Medical Devices

Promote R&D breakthroughs in and the large-scale application of new diagnostic and therapeutic equipment such as ultra-high-end computed tomography scanners, high-resolution magnetic resonance imaging systems, radiotherapy systems, intelligent surgical robots and life support equipment, and develop new implantable and interventional devices for major chronic disease rehabilitation, neurostimulation, and cardiovascular and orthopedic treatment.

CHAPTER 6

Promoting High-Quality and Efficient Development of the Service Sector

China will implement initiatives to expand the capacity and improve the quality of the service sector, deepen reform and opening up in the services field, improve the supporting policy system, comprehensively enhance the quality, efficiency and competitiveness of the service sector, and better leverage its role in supporting industrial upgrading, meeting public needs and expanding employment.

Section 1 Extending Producer Services Toward Greater Specialization and the Higher End of the Value Chain

China will strengthen weak links in producer services across the entire chain and raise the level of integrated development of modern services with advanced manufacturing and modern agriculture. It will vigorously develop scientific and technological services, enhance service capabilities in research and development and design, intellectual property, commercialization of scientific and technological achievements, and inspection, testing and certification, cultivate industrial design centers of international standard, and, relying on industrial clusters, establish a number of industry-wide generic technology platforms, pilot testing and validation platforms, and integrated and efficient quality infrastructure. It will enhance the comprehensive competitiveness of services such as financial leasing, logistics and warehousing, and human resources, expand services such as energy conservation and environmental protection and digital and intelligent transformation, and raise the share of value-added services. It will strengthen and improve business services, develop high-level third-party professional institutions, and enhance their credibility and international recognition.

Section 2 Promoting High-Quality, Diversified and Convenient Development of Consumer Services

Adapting to the upgrading of the household consumption structure, China will actively develop consumer services that are inclusive and accessible and offer personalized variety. It will accelerate efforts to shore up weak links in inclusive services such as elderly care, childcare and health, improve mechanisms such as government purchase of services, public construction with private operation, and private construction with public support, and support diverse providers in expanding service supply. It will encourage wholesale and retail, accommodation and catering to develop with distinctive and high-quality features, actively expand new forms of business and new models, and promote coordinated online and offline development. It will improve the quality of services such as domestic services, property management and express delivery, innovate integrated community service models, and promote brand-based and standardized development.

It will rely on industries with wide-ranging spillover effects to promote the integrated development of multiple business forms. It will focus on public health, smart elderly care, cultural tourism, at-home services and other areas to cultivate a number of new growth points in consumer services.

Section 3 Improving the Policy System for Service Sector Development

China will relax market access in the services field, expand high-quality business entities, deepen regulatory reform, and improve cross-departmental and cross-industry approval and regulation models suited to the integration of business forms. It will expand high-standard opening up of the service sector, attract internationally renowned enterprises to invest and operate in China, and expand overseas "manufacturing plus services" business networks. It will innovate financing and land use models for the service sector, improve the pricing mechanism and supporting policies for inclusive services, and encourage the use of existing resources to renovate service facilities. It will accelerate the development of service standards in key areas such as elderly care and childcare, and implement systems for quality service commitments, certification and labeling. It will enhance the professionalism of service personnel, and improve the skills evaluation mechanism and the credit system. It will improve the statistical monitoring system for the service sector.

CHAPTER 7

Building a Modern Infrastructure System

Adhering to the principle of building moderately ahead of demand but not excessively so, China will strengthen overall planning for infrastructure, optimize its layout and structure, promote integration and connectivity, and enhance safety, resilience and operational sustainability.

Section 1 Improving the Modern Comprehensive Transport System

China will improve networks, strengthen connections and raise quality, strengthen cross-regional coordinated planning and integrated intermodal connectivity, and comprehensively improve the overall benefits of transport infrastructure. It will improve the main framework of the national comprehensive multidimensional transport network; build strategic trunk corridors to a high standard, including those along the coast, national borders and major rivers, those out of Xinjiang and into Tibet, and the New International Land-Sea Trade Corridor in the west; basically complete the "eight vertical and eight horizontal" high-speed railway trunk corridors and the national expressway network; upgrade high-grade inland waterway channels; and basically build world-class port clusters and airport clusters. It will strengthen coverage and accessibility in weak areas, promote the upgrading and renovation of conventional-speed railways and ordinary national and provincial highways, launch a new round of rural road improvement initiatives, strengthen railway and regional airport development in the western region, and improve the road network layout in border areas. It will build international and national comprehensive transport hub cities, strengthen the construction of collection and distribution networks and the connection of stations and yards, and improve national postal and express delivery hubs. It will improve a diversified and highly resilient international transport corridor system, promote the connectivity of cross-border transport infrastructure, and promote the healthy and orderly development of international air cargo. It will take a coordinated approach to functional improvement and green, safe and intelligent development, advance the renewal, renovation and maintenance management of transport infrastructure, strengthen safety risk assessment and monitoring and early warning, and implement projects to enhance highway safety and resilience. It will deepen reform of the comprehensive transport system and advance railway system reform and the optimization of toll road policies.

Box 4 Building a National Comprehensive Multidimensional Transport Network

01 The "Eight Vertical and Eight Horizontal" High-speed Rail Main Corridors

Connect the high-standard corridor along the Yangtze River; complete the Beijing–Kunming, Lanzhou (Xining)–Guangzhou and Xiamen–Chongqing corridors and the

Beijing–Shanghai auxiliary corridor; complete the Yichang–Changde high-speed rail on the Hohhot–Nanning corridor; build the Wenzhou–Fuzhou high-speed rail on the coastal corridor, the Fuyang–Huanggang high-speed rail on the Beijing–Hong Kong (Taiwan) corridor, the Baotou–Ordos–Yulin high-speed rail on the Baotou (Yinchuan)–Haikou corridor together with the Zhanjiang–Haikou cross-sea ferry and related lines, the Taiyuan–Suide high-speed rail on the Qingdao–Yinchuan corridor, and the Shanghai–Hangzhou high-speed rail on the Shanghai–Kunming corridor. Advance the Shanghai–Ningbo cross-sea corridor project and build high-speed rail regional connecting lines such as Yongzhou–Qingyuan–Guangzhou.

02 Conventional Railway Network

Advance the construction of the Ya'an–Nyingchi section of the Sichuan–Tibet Railway to high standards; build the eastern and western sections of the Xinjiang–Tibet Railway and the Golmud–Lhasa electrification project and the Bomi–Rawu railway project on the Qinghai–Tibet Railway. Build border railways such as Heihe–Wuyiling and Wenshan–Jingxi. Implement the railway freight network project, carry out key projects for transporting Xinjiang coal out of the region such as the capacity expansion and renovation of the Linhe–Hami railway, and improve the railway container transport network and the multimodal transport system. Advance preliminary work on the Wenzhou–Wuyishan–Ji'an and Dali–Lijiang–Panzhihua railways.

03 National Highway Network

Build the main lines, parallel lines and connecting lines of national expressways such as Beijing–Harbin, Beijing–Hong Kong–Macao, Shenyang–Haikou, Changchun–Shenzhen and Lanzhou–Haikou, as well as expressways such as Kuitun–Dushanzi–Kuqa; advance safety and resilience improvements on key sections of existing national expressways such as Beijing–Kunming, Beijing–Taipei, Shanghai–Chengdu, Lianyungang–Khorgos, Xiamen–Chengdu, Baotou–Maoming, Yinchuan–Kunming and Hangzhou–Ruili. Fully connect the G219 and G331 border strategic land trunk corridors, build parallel lines and border port connecting lines of border highways, advance construction of the G228 coastal trunk corridor, and upgrade and renovate the G109, G317 and G318 trunk corridors leading out of Xinjiang and into Tibet.

04 Coastal Ports

Optimize the functional layout of the world-class port clusters in the Bohai Rim, the Yangtze River Delta and the Guangdong–Hong Kong–Macao Greater Bay Area, advance port cluster integration and integrated development in an orderly manner, and build container terminal projects such as the north side of Xiaoyangshan in the Yangshan port area, the Liuheng port area of Ningbo Zhoushan Port, the Nansha port area of Guangzhou Port, the Xiang'an port area of Xiamen Port and the Dongjiakou port area of Qingdao Port. Upgrade the Beibu Gulf international gateway port and the Yangpu regional international container hub port.

05 High-grade Inland Waterway Channels

Build a new waterway for the Three Gorges and enhance the smooth flow of the Yangtze River mainline channel. Build the Xijiang River mainline channel and optimize and improve the high-grade waterway networks of the Yangtze River Delta and

the Pearl River Delta. Implement quality improvement and renovation projects for the Beijing–Hangzhou Canal and the Huai River mainline channel, and build high-grade waterways on major Yangtze River tributaries such as the Han River.

06 Modern Airport System

Enhance the capacity of the world-class airport clusters in the Beijing–Tianjin–Hebei region, the Yangtze River Delta, the Guangdong–Hong Kong–Macao Greater Bay Area and the Chengdu–Chongqing region; complete the new airports in Dalian and Xiamen; build new airports in Guangzhou and Nantong; advance preliminary work on new airports in Chongqing and Sanya; and implement expansion and renovation projects for hub airports such as Shenyang, Changchun, Nanjing, Hangzhou, Wenzhou, Zhengzhou and Chengdu Tianfu. Advance regional airport projects such as the relocation and construction of the Yanji and Yining airports.

Section 2 Stepping Up the Building of New Energy Infrastructure

China will thoroughly implement the new energy security strategy, accelerate the building of a clean, low-carbon, safe and efficient new energy system, and build itself into an energy powerhouse. It will advance the safe, reliable and orderly replacement of fossil energy with non-fossil energy, persist in developing wind, solar, hydro, nuclear and other forms of energy simultaneously, and implement a ten-year doubling initiative for non-fossil energy. It will coordinate local consumption and outbound transmission, build clean energy bases, including wind and solar power bases in the Three-North region, integrated hydro-wind-solar bases in the southwest, coastal nuclear power, and offshore wind power, strengthen the nearby development and utilization of distributed energy, develop green hydrogen, ammonia and methanol, and actively promote concentrated solar power and geothermal energy utilization. It will strengthen the clean and efficient use of fossil energy, and advance the upgrading and transformation of coal-fired power and the replacement of bulk coal. It will strive to build a new type of power system, comprehensively enhance the complementarity, mutual support, safety and resilience of the power system, optimize the national power flow and the layout of cross-regional corridors, accelerate the building of smart grids, improve urban and rural distribution networks, make a scientific layout of pumped-storage hydropower, and vigorously develop new types of energy storage. It will increase the level of electrification of end-use energy and promote the green and low-carbon transformation of energy consumption. It will basically complete the building of a unified national electricity market system and improve the operation and dispatch mechanism of the “one national network” for oil and gas.

Box 5 Building a New Energy System

01 Major Hydropower and Hydro-Wind-Solar Integrated Bases

Advance the construction of the downstream hydropower project on the Yarlung Tsangpo River in a safe and orderly manner, and advance the construction of integrated hydro-wind-solar bases in river basins such as the Yalong River, the upper

reaches of the Jinsha River, the upper reaches of the Lancang River, and southeastern Tibet (Yucha). Build hydropower stations such as Cihaxia. Study and demonstrate hydropower planning for the Nu River basin. Build a batch of pumped-storage power stations in areas with good site resources and large load regulation demand, adding about 100 million kilowatts of newly commissioned installed capacity.

02 "Desert, Gobi and Wasteland" and Other New Energy Bases

Focusing on the Kubuqi, Ulan Buh, Tengger and Badain Jaran deserts, with other desert, gobi and barren areas as supplements, build large wind and photovoltaic power bases mainly for transmitting power out of the region. Continue to advance the construction of new energy bases in Xinjiang, the upper reaches of the Yellow River, the Hexi Corridor, the "Jizi Bend" of the Yellow River, northern Hebei and the Songliao region.

03 Offshore Wind Power Bases

Build offshore wind power bases in the Bohai Sea, the Yellow Sea, the East China Sea and the South China Sea, advance the development of deep-sea and far-sea wind power in a well-regulated and orderly manner, and bring the cumulative grid-connected installed capacity of offshore wind power to more than 100 million kilowatts.

04 Coastal Nuclear Power

Actively advance coastal nuclear power construction in a safe and orderly manner, with nuclear power operating installed capacity reaching about 110 million kilowatts. Promote the comprehensive utilization of nuclear energy in light of local conditions. Complete the small pressurized water reactor demonstration project and steadily advance the R&D and application demonstration of fourth-generation reactor technologies.

05 Power Transmission Corridors

Build power transmission corridors for clean energy bases in provinces and autonomous regions such as Inner Mongolia, Jilin, Heilongjiang, Gansu, Qinghai, Ningxia, Xinjiang and Tibet, and bring the capacity of west-to-east power transmission to more than 420 million kilowatts.

06 Mutual Power Support Projects

Strengthen interprovincial mutual power support and mutual support across power grid operating areas, build mutual power support projects such as Fujian–Jiangxi, Anhui–Hubei, Shandong–Jiangsu, Chongqing–Guizhou, Hunan–Guizhou and Hunan–Guangdong, and promote the optimal allocation of power resources.

07 Natural Gas Pipeline Network

Build the China–Russia Far East natural gas pipeline and the second Sichuan gas-to-east transmission line, and advance preliminary work on the China–Russia central line natural gas pipeline.

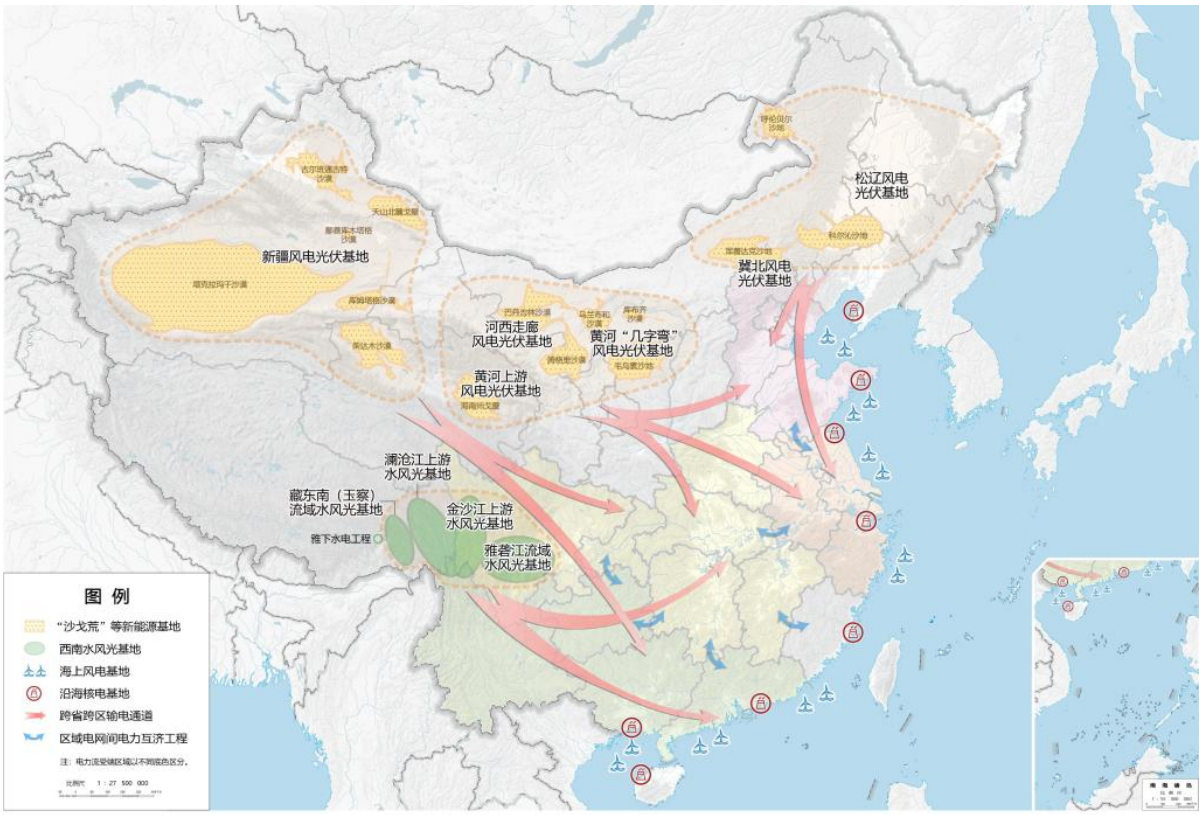

图 1 清洁能源基地布局示意图

Figure 1 Schematic Layout of Clean Energy Bases

Note: reproduced as published; the map uses colour coding.

Legend

New energy bases in “desert, gobi and wasteland” areas and other areas

Hydropower-wind-solar bases in southwest China

Offshore wind power bases

Coastal nuclear power bases

Cross-provincial and cross-regional power transmission corridors

Mutual power support projects between regional power grids

Note: The receiving areas of power flows are distinguished by different colors.

Section 3 Accelerating the Building of a Modern National Water Network

China will strengthen the building of the national water network and enhance its capacity for flood and waterlogging prevention, coordinated allocation of water resources, and urban and rural water supply. It will coordinate the prevention of basin-wide floods and local disasters, strengthen the building of flood-control reservoirs, river channels and embankments, and flood storage and detention areas, advance the systematic management of small and medium-sized rivers and the reinforcement and hazard elimination of unsafe reservoirs, and enhance flood control and risk avoidance capacity in areas with concentrated heavy rainfall. It will improve the cross-basin and cross-regional water re-

source allocation system and improve the main framework and key water conveyance and distribution channels of the national water network. It will strengthen water supply and irrigation guarantees, advance the construction and renovation of large and medium-sized irrigation districts in a comprehensive manner, and accelerate the building of emergency backup water source projects in cities. It will strengthen the ecological protection and governance of rivers and lakes, advance water source conservation and soil and water conservation, and enhance the self-repairing capacity of water ecosystems. It will carry out groundwater protection and governance initiatives and gradually achieve a balance between extraction and recharge.

Box 6 Building a Modern Water Network

01 Flood Control and Disaster Reduction

Build projects such as reinforcement of key dikes at the Two Lakes on the Yangtze River, reinforcement of dikes on the upper Yellow River main stream, regulation of the Huai River main stream flood-diversion areas and flood control improvement of the Hai River's major channels, as well as flood-control reservoirs such as Guxian on the Yellow River, Shangbaishi in Fujian and Huangmaoxia in Guangdong; study, demonstrate and advance the Heishanxia reach development project on the Yellow River and flood-control projects such as Guanting Gorge on the Yongding River and Zhangfang on the Juma River. Build a rainstorm and flash flood disaster reduction system with the northern region as the focus. Strengthen the construction of national flood storage and detention areas.

02 Major Water Diversion Projects

Build projects such as Phase II of the eastern route of the South-to-North Water Diversion, the Yangtze-to-Han water supplementation project on the middle route of the South-to-North Water Diversion, the Liaodong Peninsula water resources allocation project, Sichuan's Yinda-Jimin water diversion, Phase II of Yunnan's central water diversion, Zhejiang's central water resources allocation project and Phase II of Anhui's Yangtze-to-Huai water diversion. Advance preliminary work on the southwest Fujian water resources allocation project. Study and demonstrate the western route of the South-to-North Water Diversion.

03 Water Supply and Irrigation

Advance the comprehensive modernization of large irrigation districts such as Pishihang in Anhui, Dujiangyan in Sichuan, Hetao in Inner Mongolia, the Yarkant River in Xinjiang, Weishan in Shandong and Qingtongxia in Ningxia, and build large and medium-sized irrigation districts such as the Leizhou Peninsula in Guangdong, Yongbei in Guangxi and Yutan in Chongqing, as well as water source reservoirs such as Jiaoyan in Shaanxi and Yulong in Guizhou. Build the Poyang Lake water conservancy hub project and give full play to its comprehensive benefits in ecology, water supply and irrigation. Study and demonstrate the Chenglingji water conservancy hub project on Dongting Lake.

Section 4 Building New Infrastructure Moderately Ahead of Demand

Focusing on supporting industrial upgrading and digital and intelligent development, China will advance the layout and construction of new infrastructure and its intensive and efficient use. It will improve information and communication networks, deepen the large-scale deployment of fifth-generation mobile communications (5G) and gigabit optical networks, advance the construction and development of 5G-Advanced (5G-A) networks and 10-gigabit optical networks and technological innovation in sixth-generation mobile communications (6G), and promote the independent iteration of the mobile Internet of Things. It will deeply advance the East Data, West Computing project to channel computing resources from the east to the west, and build a multi-tiered computing power facility system and a nationally integrated computing power network. It will implement the national blockchain network construction project. It will improve civilian space infrastructure, coordinate the construction of satellite communications, navigation and remote sensing systems, and accelerate the networking of low-orbit satellite internet. It will advance the digital and intelligent upgrading of infrastructure in transport, energy, water conservancy and other fields.

Box 7 Building New Infrastructure

01 National Integrated Computing Power Network

Build a new-generation system of supercomputing, general computing and intelligent computing facilities, and actively develop public cloud services. Build a computing power monitoring and scheduling platform, and formulate and improve standards and specifications for computing power resource pooling, grid connection, monitoring, operation and scheduling.

02 Satellite Internet

Take coordinated steps to advance the construction of satellite internet constellations and enhance launch, tracking, telemetry and command support and security protection capabilities; accelerate the large-scale application and international promotion of satellite internet and BeiDou in key industries, mass consumer markets and other fields. Strengthen the overall coordination of multi-user demand, advance the co-construction of remote sensing satellites and the sharing and common use of data, and build a comprehensive service system that integrates space, air and ground and combines communications, navigation, sensing and computing.

03 Information and Communications Networks

Advance the deployment and application of 10-gigabit optical networks and build 1 million high-speed passive optical network (50G PON) ports. Accelerate the large-scale commercial use of 5G-A mobile communications networks, build 500,000 5G-A base stations, and strengthen 6G technology R&D, standards development and application verification. Enhance the capacity of backbone transmission networks and advance international cooperation in submarine cable construction. Implement universal telecommunications services and improve broadband network coverage in border areas.

04 Data Infrastructure

Build a data circulation and utilization facility system and a data security protection platform with unified directory identification, identity authentication and access management, and lay out and build bases for data annotation, circulation, delivery and application as well as high-speed data transmission networks.

05 Low-altitude Infrastructure

With scenario expansion as the driver, scientifically designate low-altitude air routes and deploy takeoff and landing, communications, navigation, surveillance, meteorological and other infrastructure along the routes. Advance the construction of low-altitude intelligent networked systems and low-altitude security protection capabilities at key regional locations.

PART 3

Accelerating High-Level Self-Reliance in Science and Technology and Fostering New Quality Productive Forces

China will seize the historic opportunities presented by a new round of scientific and technological revolution and industrial transformation, take coordinated steps to build itself into a leading country in education, science and technology, and human resources, improve the overall performance of the national innovation system, comprehensively strengthen its capacity for independent innovation, seize the commanding heights of scientific and technological development, promote the deep integration of scientific and technological innovation with industrial innovation, and continuously foster new quality productive forces.

CHAPTER 8

Strengthening Original Innovation and Efforts to Make Breakthroughs in Core Technologies in Key Fields

China will combine technology-driven and demand-pulled approaches, combine forging strengths and remedying weaknesses, improve the new system for mobilizing resources nationwide, and produce more landmark original achievements.

Section 1 Winning the Battle for Breakthroughs in Core Technologies in Key Fields

Focusing on strategically vital fields and weak links in industrial and supply chains, China will take extraordinary measures and drive whole-chain efforts to achieve decisive

breakthroughs in core technologies in key fields such as integrated circuits, industrial machine tools, high-end instruments, basic software, advanced materials and biomanufacturing. It will improve the demand-oriented mechanism for identifying research tasks and carry out technological and economic security assessments. It will strengthen cross-field and interdisciplinary coordination, improve the mechanism for the special allocation of talent for major tasks, refine systems such as "enlisting the best candidates to lead research" and "horse racing," and explore funding support methods such as replacing subsidies with awards and retrospective subsidies. It will strengthen the approach of letting application drive research and integrating research with application, take an integrated approach to technological research and development, the commercialization of achievements, standards development and industrial cultivation, and accelerate the application of research results and the iterative upgrading of products.

Section 2 Strengthening Science and Technology Layout in Strategic Frontier Fields

Aiming at the global frontiers of science and technology, China will strengthen systematic planning, implement strategic science and technology deployments in artificial intelligence, quantum technology, biotechnology, new energy and other fields, accelerate breakthroughs in basic theories and underlying technologies, and promote their commercialization and application. It will organize cutting-edge technology forecasting and foresight at a high level, establish a national list of critical and emerging technologies, and continue to advance research and development in frontier technologies. It will strengthen the orientation toward original innovation in scientific research and technological development, optimize the environment conducive to original and disruptive innovation, innovate the selection and funding mechanisms for non-consensus projects, and expand the scale and proportion of original and disruptive projects in major national science and technology tasks and in the National Natural Science Foundation of China. It will highlight national strategic needs, make solid progress in major national science and technology projects, and deploy major national science and technology programs oriented toward 2035 in advance.

Box 8 Frontier Science and Technology Breakthroughs

01 Artificial Intelligence

Develop high-performance artificial intelligence chips and highly available basic software stacks, accelerate exploration and innovation in foundational model architectures, deepen research on key algorithms such as interpretability and decision-making, and strengthen research on and application of AI data governance and security technologies.

02 Quantum Science and Technology

Build an integrated space-ground quantum communication network, develop fault-tolerant general-purpose quantum computers and scalable special-purpose quantum computers, and achieve breakthroughs in key quantum precision measurement technologies.

03 Controlled Nuclear Fusion

Achieve breakthroughs in key nuclear fusion technologies such as the tritium fuel preparation cycle, material irradiation testing, high-performance lasers and superconducting magnet manufacturing; carry out plasma operation experiments for deuterium-tritium fusion burning and feasibility verification of multiple technology paths; and advance the engineering process of nuclear fusion R&D.

04 Life Sciences and Biotechnology

Deepen research on gene editing, precise molecular delivery, cell programming and regulation, and advanced omics; achieve breakthroughs in technologies such as artificial life system synthesis, organoids and organ-on-a-chip, organ manufacturing, and biological structure and function imaging; and develop software tools for bioengineering design.

05 Brain Science and Brain-inspired Research

Decode the principles of brain cognition and brain function, build innovative technology platforms such as neural activity detection and regulation, strengthen research on technologies for proactive responses to brain health, develop new methods and products for the prevention, diagnosis, intervention and treatment of major brain diseases, and build brain-inspired general intelligent systems.

06 Prevention and Treatment of Major Diseases and R&D of Innovative Drugs

Improve the technical system for the prevention and treatment of infectious diseases such as AIDS, tuberculosis and viral hepatitis; research key technologies such as early screening and early detection of cancer, cardiovascular and cerebrovascular diseases, and respiratory and metabolic diseases, precision medicine and biological therapy; and develop innovative drugs for major high-incidence chronic diseases, major infectious diseases, rare diseases and pediatric use.

07 Deep Sea, Deep Earth and Polar Exploration

Carry out tasks such as the discovery of typical deep-sea habitats, ocean drilling, deep-sea mineral development, natural gas hydrate extraction and ultra-deepwater oil and gas development; accelerate the development of deep-sea unmanned intelligent technologies; build the third phase of the Jiaolong deep-sea exploration program; and develop a deep-sea space station. Achieve breakthroughs in equipment for deep Earth exploration and mineral resources prospecting, carry out basic scientific research such as Earth transparency, and advance technological innovation in the intelligent development and utilization of mineral resources. Build the third phase of the Xuelong polar exploration program.

08 Deep Space Exploration

Demonstrate and implement Phase II of the planetary exploration project, the near-Earth asteroid defense project and the solar system boundary exploration project. Develop reusable heavy-lift launch vehicles. Demonstrate and build an international lunar research station and implement the lunar exploration project.

Section 3 Comprehensively Raising the Level of Basic Research

China will strengthen the strategic, forward-looking and systematic layout of basic research and take coordinated steps to advance both goal-oriented and free-exploration basic research. It will accelerate the formation of a diversified funding structure for basic research, increase fiscal investment, improve tax incentive policies, guide localities, enterprises, social organizations and individuals with the capacity to do so to support basic research, encourage the establishment of public welfare funds for basic research, and achieve a marked increase in the share of basic research spending in R&D spending. It will improve the funding mechanism that combines competitive support with stable support, increase long-term and stable support for strong teams and young scientific and technological talent engaged in basic research, and explore long-cycle funding models. It will encourage high-risk, high-value basic research and foster a sound environment that encourages exploration and tolerates failure. Focusing on scientific frontiers at the extremely macro and extremely micro scales, under extreme conditions, and in highly integrated interdisciplinary fields, it will strengthen basic research in emerging fields, interdisciplinary integration and cross-disciplinary areas.

CHAPTER 9

Enhancing Systematic Innovation Capacity

China will take coordinated steps to build national strategic scientific and technological forces, improve the efficiency of innovation resource allocation, and build an independent, complete, open and efficient national innovation system.

Section 1 Enhancing the Leading Role of National Strategic Scientific and Technological Forces

China will optimize the positioning and layout of national strategic scientific and technological forces such as national laboratories, national research institutions, high-level research universities and leading science and technology enterprises. It will give play to the leading role of national laboratories, support them in taking the lead in implementing major national science and technology tasks and exploring new models of research organization, and strengthen the building of national key laboratories. It will accelerate the adjustment, optimization and reorganization of the layout of national research institutions and improve management and operational mechanisms suited to their functions and positioning. It will support high-level research universities in creating a first-class academic environment and in becoming the main force in basic research and the main front for talent cultivation. It will cultivate and strengthen leading science and technology enterprises and enhance their capacity to integrate innovation resources and build industrial ecosystems. It will encourage and regulate the development of new types of research and development institutions.

Section 2 Strengthening Support for Scientific and Technological Innovation Resources

China will strengthen the coordinated mechanism for deploying science and technology tasks and improve the national decision-making consultation system for major science and technology matters. It will improve the mechanism for the allocation, management and use of central government science and technology funds, improve the mechanism for central and local governments to share investment in major science and technology tasks, and improve investment performance. It will expand the scope of the "lump-sum funding" system for fiscal science and technology research projects and give scientists greater decision-making power over technical routes, greater control over funds and greater authority to deploy resources. It will strengthen the independent provision of basic conditions for science and technology, coordinate the building of science and technology innovation platforms and bases, systematically plan and build major science and technology infrastructure, strengthen the development of supporting conditions such as high-end scientific research instruments, scientific journals and scientific data, and enhance the opening and sharing of resources. It will improve the regional innovation system, strengthen the source function of international science and technology innovation centers, plan and build regional science and technology innovation centers and industrial science and technology innovation highlands, enhance the clustering effect of innovation resources in comprehensive national science centers, and improve the innovation mechanism featuring central-local coordination and regional synergy.

Box 9 Enhancing Basic Innovation Capacity

01 National Laboratory System

Support national laboratories, national key laboratories and others in strengthening the construction of major scientific research platforms and improving research conditions; with national laboratories as the main body and national science and technology innovation platform bases, including national key laboratories conducting collaborative research, as important support, form a national laboratory system that is mission-driven, task-oriented and efficiently coordinated.

02 Major Science and Technology Infrastructure

Build strategically oriented facilities such as the thermal physics test facility for key components of air-breathing engines and the high-precision ground-based timing system; application-support facilities such as Phase II of the China Spallation Neutron Source project and the deep rock and soil engineering disturbance simulation facility; and forward-looking leading facilities such as the integrated space-ground quantum precision measurement experimental facility and the upgrading of the pulsed high magnetic field experimental device.

03 Regional Innovation System

Support the building of international science and technology innovation centers in Beijing (the Beijing–Tianjin–Hebei region), Shanghai (the Yangtze River Delta) and the Guangdong–Hong Kong–Macao Greater Bay Area, and create world-class sources

of science and technology innovation. Support the comprehensive national science centers in Huairou of Beijing, Zhangjiang of Shanghai, the Greater Bay Area and Hefei of Anhui in building clusters of major research facilities and platforms. Advance the building of regional science and technology innovation centers in the Chengdu–Chongqing region, Wuhan and Xi'an.

04 Science and Technology Infrastructure Platforms

Implement the industrial innovation project for high-end scientific research instruments and biological reagents. Improve the layout of biological germplasm and experimental material resource banks and national field scientific observation and research stations. Build world-class science and technology journals, high-level scientific and technological literature platforms and scientific databases.

Section 3 Creating a New Pattern of High-Level Opening Up and Cooperation in Science and Technology

China will foster an open innovation ecosystem with global competitiveness and support joint efforts with researchers from other countries to tackle basic frontier scientific problems. It will give play to the role of science research funds open to the world, expand the opening up of science and technology programs, establish and improve management systems for the cross-border allocation and overseas use of science and technology funds and mechanisms for the safe and orderly cross-border flow of research data, and promote the opening of major research infrastructure and platforms to scientists around the world. It will improve the management mechanisms for foreign professional exchanges and cooperation by universities, research institutes and science and technology societies. It will take the lead in implementing and actively participate in international big science programs and big science projects, support the establishment of international science and technology organizations in China, and create international science and technology awards with global influence.

CHAPTER 10

Strengthening the Principal Role of Enterprises in Scientific and Technological Innovation

China will ensure that enterprises play the principal role in technological innovation decision-making, research and development investment, research organization, and the commercialization and application of achievements, and promote the deep integration of the innovation chain, the industrial chain, the capital chain and the talent chain.

Section 1 Channeling Innovation Resources Toward Enterprises

China will establish and improve a policy system for channeling innovation resources such as projects, platforms, data and talent toward enterprises. It will increase enterprises' participation in major national science and technology innovation decisions, make key generic technology needs in industry an important direction of support under national science and technology programs, and incorporate major science and technology projects of qualified enterprises into the national science and technology program system. It will support enterprises in undertaking more national science and technology research tasks and give lead enterprises greater autonomy in setting technical routes, advancing research tasks, selecting participating entities and allocating and using funds. It will give priority to supporting key science and technology enterprises in building national science and technology innovation platforms and bases, and increase the opening of national scientific data, engineering test data and talent programs to enterprises. It will improve policies on researchers starting businesses after leaving their posts and on taking part-time jobs with additional pay, and encourage outstanding talent to flow to enterprises.

Section 2 Strengthening Enterprise-Led Integrated Innovation Among Industry, Academia and Research

China will encourage enterprises to carry out joint research in response to industrial needs together with universities and research institutes. It will support key science and technology enterprises in taking the lead in forming innovation consortia and in conducting research and development on key generic technologies and pilot testing and demonstration applications of scientific and technological achievements. It will deepen reform to grant greater rights over job-related scientific and technological achievements, establish a system for the separate listing and management of job-related scientific and technological achievements as assets, advance the building of a technology transfer system, and accelerate the efficient commercialization and application of scientific and technological achievements. It will guide universities and research institutes in licensing scientific and technological innovation achievements to small and medium-sized enterprises on a "use first, pay later" basis. It will encourage leading science and technology enterprises to open research conditions and application scenarios to small, medium and micro enterprises and provide technology development services.

Section 3 Improving the Policy System for Promoting Enterprise Innovation

China will strengthen the supply of inclusive policies and create a sound environment conducive to enterprise innovation. It will support the development of high-tech enterprises and small and medium-sized science and technology enterprises and raise the proportion of additional tax deductions for enterprise research and development expenses. It will establish an enterprise research and development reserve fund system. It will build a science and technology finance system compatible with scientific and technological innovation, improve policies for supporting long-term capital in making early-stage, small-scale, long-term and hard-tech investments, support high-quality sci-

ence and technology enterprises in going public for financing and issuing bonds, build the "sci-tech board" of the bond market to a high standard, vigorously develop venture capital, broaden the sources of medium- and long-term venture capital funds through multiple channels, and give play to the role of national venture capital guidance funds and national-level merger and acquisition funds. It will make it easier for foreign capital to conduct equity investment and venture capital in China. It will increase government procurement of independently innovated products. It will establish a science and technology insurance policy system and enrich science and technology insurance products. It will strengthen whole-chain intellectual property protection, optimize patent and trademark examination policies, and fully implement the patent open licensing system.

CHAPTER 11

Taking Integrated Steps to Develop Education, Science and Technology, and Human Resources

China will deepen integrated reform of education, science and technology, and human resources, strengthen the alignment of plans, coordination of policies, pooling of resources and linkage of evaluations, and promote positive interaction between independent scientific and technological innovation and independent talent cultivation.

Section 1 Establishing and Improving a Coordinated Mechanism for Integrated Advancement

China will improve the mechanism for the coordinated implementation of education, science and technology, and human resources strategies and strengthen the organic alignment of strategic goals, the integrated deployment of strategic tasks, the coordinated efforts of policies and measures, and the coordinated allocation of resources and factors. It will promote the coordinated layout of platforms and bases for education, science and technology, and human resources, and build education centers, science centers and talent centers with global influence. It will explore the establishment of coordinated management mechanisms for education, science and technology, and human resources in localities where conditions permit. It will accelerate the building of national strategic talent forces in response to innovation needs and increase efforts to cultivate and support strategic scientists, leading science and technology talent, basic research talent and young science and technology talent. It will strengthen talent collaboration, optimize the talent structure, improve orderly mobility mechanisms, and promote coordinated regional development of talent.

Section 2 Taking Coordinated Steps to Cultivate Innovative Talent

China will take coordinated steps to cultivate talent in response to scientific and technological innovation, industrial development and national strategic needs, and improve the quality of independent talent cultivation. Focusing on advantageous disciplines and urgent strategic needs, it will appropriately expand the scope of the "Double First-Class" initiative and establish a number of new research universities. It will improve the mechanism for adjusting the disciplines and majors offered in higher education, make extraordinary arrangements for the layout of disciplines and majors urgently needed in emerging fields such as artificial intelligence and integrated circuits, and deepen implementation of the breakthrough plan for basic and interdisciplinary disciplines. It will strengthen the talent aggregation and cultivation functions of research institutions, innovation platforms, enterprises and science and technology programs, and tilt enrollment quotas toward entities undertaking major science and technology tasks. It will explore new models for cultivating top-notch innovative talent, strengthen the cultivation of young people's scientific literacy, critical thinking and innovation capacity, strengthen coordination between science and technology education and humanities education, and strengthen the integrated cultivation of undergraduate, master's and doctoral students in basic disciplines, interdisciplinary fields and strategically urgent areas.

Section 3 Taking Coordinated Steps to Innovate Incentive and Evaluation Mechanisms

With innovation capacity, quality, effectiveness and contribution as the evaluation orientation, China will deepen reform of project review, institutional evaluation, talent evaluation and income distribution to stimulate the impetus and vitality for innovation and creation. It will carry out basic research evaluation focused primarily on the originality and academic value of results and improve international peer review. It will implement applied research and technological development evaluation based primarily on user and market feedback, and make new technologies and new products an important basis for performance assessment, professional title appraisal and support under talent programs. It will give employers greater autonomy in talent evaluation and prevent the simple use of titles and honors to determine remuneration and allocate resources. It will improve supporting policies on staffing, remuneration, professional title appointment, assessment and promotion, and smooth the channels for talent exchange among universities, research institutes and enterprises. It will improve support and guarantee mechanisms for talent introduced from overseas, establish a high-tech talent immigration system, and attract and cultivate outstanding talent from around the world. It will strengthen the popularization of science and technology, cultivate an innovation culture and promote the spirit of scientists. It will strengthen the development of the rule of law, ethics, integrity and security in science and technology.

PART 4

Deepening the Building of Digital China and Raising the Level of Digital and Intelligent Development

Keeping pace with the prevailing trend of digital, networked and intelligent development, China will fully leverage its strengths in abundant data resources, a complete industrial system and extensive application scenarios, unlock the potential of data as a production factor, accelerate innovation in digital and intelligent technologies, deepen and expand AI Plus, empower economic and social development and the improvement of governance capacity, and promote profound changes in the mode of production and a revolutionary leap in productive forces.

CHAPTER 12

Strengthening the Efficient Supply of Computing Power, Algorithms and Data

China will take a coordinated approach to building computing power facilities, developing models and algorithms, and supplying high-quality data resources, thereby consolidating the foundation for digital and intelligent development.

Section 1 Strengthening Support from Computing Power Facilities

The layout of computing power facilities will be coordinated and their construction carried out in an orderly manner, and computing power resources will be developed on a large scale and in an intensive, green and inclusive way. The building of national hub computing power facility clusters will be accelerated; regions with suitable conditions will be supported in developing an appropriate amount of computing power to meet

the needs of low-latency scenarios; and coordinated development of cloud, edge and device computing will be advanced. The supply of high-performance, high-quality intelligent computing resources will be increased, and the case for building ultra-large-scale intelligent computing clusters will be assessed. Market-based construction and operation of computing power facilities will be promoted; computing power needs will be met through multiple means such as government procurement of computing services and computing power leasing; and standardized, scalable intelligent computing cloud services will be developed through innovation. The coordinated layout of green power and computing power will be promoted. Nationwide integrated monitoring and scheduling of computing power will be strengthened to improve access to and precise matching of computing power. The development of independent, controllable and collaboratively operating hardware and software ecosystems will be accelerated. Computing power will be made more accessible and easier to use, and the computing costs of small and medium-sized enterprises will be lowered.

Section 2 Promoting Iterative Innovation in Models and Algorithms

Breakthroughs in the basic theories and core technologies of artificial intelligence will be accelerated; the architecture of AI models and their algorithms will be improved and optimized; and collaborative innovation in models, chips, cloud and applications will be strengthened. An organizational model for algorithm innovation that is task-oriented, flexibly authorized and cross-domain collaborative will be established, and research on more efficient methods of model training and inference will be accelerated. Technological innovation in areas such as multimodality, AI agents, embodied intelligence and swarm intelligence will be encouraged, and pathways for the development of artificial general intelligence will be explored. General-purpose large models and industry-specific models will be developed in tandem, and high-value scenarios will be used to bring model applications to the ground and drive iterative upgrades. A system for evaluating model capabilities will be established and improved.

Section 3 Deepening the Development and Utilization of Data Resources

A national data resource system will be established, the statistical survey system for data resources will be improved, and a single national ledger of data resources will be created. The sharing of government data, the opening-up of public data and authorized data operations will be advanced in a coordinated way; the responsibility system for developing and utilizing public data resources and the mechanisms for the compliant use of personal data will be improved; and the development and opening-up of enterprise and industry data will be promoted. The data standards system and quality management system will be improved, the building of AI corpora will be accelerated, high-quality datasets will be developed for fields such as energy, transport, manufacturing, education, health and finance, and a system for the reasonable use of AI training data will be established. R&D and application of key technologies and equipment in the data field will be strengthened, the data industry will be cultivated and expanded, and the “Data Elements ×” initiative will be carried out in depth. National data infrastructure will be built and operated, and

the action plan for the development of trusted data spaces will be implemented.

CHAPTER 13

Fully Advancing Digital and Intelligent Technology Empowerment

The AI Plus initiative will be implemented across the board; AI will be more closely integrated with scientific and technological innovation, industrial development, cultural development, improving people's wellbeing and social governance; and China will seize the commanding heights of AI industrial application and empower all sectors of the economy in all respects.

Section 1 Promoting the Deep Integration of the Real Economy and the Digital Economy

The core industries of the digital economy will be expanded; industries such as next-generation communications technologies, cloud computing and blockchain will be developed; the level of industries such as high-end chips, optoelectronic devices, basic software and industrial software will be raised; and digital industrial clusters with international competitiveness will be built. The building of national AI innovation hubs will be advanced, new AI-native models and forms of business will be cultivated, and national pilot-testing bases for AI applications will be established. The intelligent, digital and networked transformation of manufacturing will be promoted, the smart manufacturing program and the industrial internet innovation and development program will be implemented, and the development of networks, identification, platforms, data and security systems and their large-scale application will be advanced in an integrated way. The digital and intelligent transformation of the services sector will be promoted, and smart agriculture will be developed. A network for promoting digital and intelligent transformation will be built, and a service system for empowering small and medium-sized enterprises with digital and intelligent technologies will be improved. The building of an open-source system will be advanced, and open-source operating mechanisms will be improved.

Section 2 Creating a Better Digital and Intelligent Life

The role of digital and intelligent technologies and of data as a production factor in enriching people's lives and improving their wellbeing will be brought fully into play, and integrated applications in fields such as education, healthcare, elderly care, culture and tourism, employment and consumption will be expanded. Smart home, smart travel and smart community scenarios will be enriched, smart terminal products and services will be developed, and convenient digital and intelligent service circles for the public will be

created. AI will be harnessed to help transform education models, and digital and intelligent technologies will be applied in an orderly way in scenarios such as assisted diagnosis and treatment, precision medicine, health management, medical insurance services, and elderly care and assistance for persons with disabilities. The nationwide action to improve digital literacy and skills will be carried out in depth, and the job-creating effect of AI will be enhanced. Active efforts will be made to use digital and intelligent technologies to improve primary-level medical service capacity and promote equal access to education, thereby contributing to equal access to basic public services.

Section 3 Raising the Digital and Intelligent Level of Government Governance

The application of digital and intelligent technologies throughout the whole process will be deepened, and government services that are ubiquitous, accessible, smart, convenient, fair and inclusive will be developed. The nationwide integrated online government service platform will be improved, the "one form for all" data system and the supporting system for public applications will be strengthened, and the sharing and use of government data across departments, levels and regions will be promoted. The deployment and application of large AI models in the field of government affairs will be advanced in a safe, prudent and orderly manner, and a new service model that accurately identifies needs, proactively plans services and handles matters intelligently throughout the process will be explored. AI-enabled security governance will be deepened, and capacities for awareness and early warning, command and decision-making, precise management and immediate response will be enhanced.

Box 10 The AI Plus Initiative

01 AI Plus Science and Technology

Accelerate the exploration of new research paradigms and technology R&D models driven by artificial intelligence, advance the R&D and application of large scientific models, build intelligent research platforms and high-quality scientific datasets, and strengthen collaborative technological innovation between artificial intelligence and fields such as quantum science and technology, life sciences, new materials, new energy and 6G.

02 AI Plus Industrial Development

Promote the application of artificial intelligence throughout the whole process of industrial design, pilot testing, production and operation, and accelerate scenario innovation such as power system regulation, energy exploration and development, and new energy power forecasting. Accelerate the digital and intelligent upgrading of agriculture in scenarios such as biological breeding, production management and disease prevention and control. In service sectors such as software and information, finance and business, and transport and logistics, promote the wide application of intelligent terminals and intelligent agents.

03 AI Plus Consumption Upgrading

Develop efficiency-enhancing and companion-type intelligent native applications,

develop new-generation intelligent terminals such as AI phones and computers and intelligent robots, and explore new forms of intelligent products. Expand new scenarios for intelligent service consumption, build a batch of artificial intelligence experience centers, and create an integrated intelligent interaction environment covering all scenarios.

04 AI Plus People's Wellbeing

Innovate teaching models such as intelligent learning companions and intelligent teachers, and deepen applications such as precision teaching, personalized learning and intelligent tutoring. Promote high-level resident health assistants and expand the application of AI-assisted diagnosis and treatment in grassroots medical institutions. Promote innovative applications of artificial intelligence in cultural creation, production and dissemination, and tourism service experiences. Improve the level of intelligence in residential design and living. Explore new forms of work featuring human-machine collaboration, and promote the application of embodied intelligence in posts with labor shortages or high environmental risks.

05 AI Plus Governance Capacity

Strengthen the application of artificial intelligence in comprehensive market regulation, work safety supervision, disaster prevention, reduction and relief, public security management, cyberspace maintenance, and ecological and environmental protection, and explore the building of a security governance system in which natural persons, digital humans and intelligent robots work in coordination.

06 AI Plus Global Cooperation

Promote the establishment of a world artificial intelligence cooperation organization, build a "Belt and Road" artificial intelligence multilateral cooperation platform and an international artificial intelligence application cooperation center, and promote the joint formulation of regulatory frameworks, technical standards and ethical norms by all countries. Accelerate the building of an open-source technology system and community ecosystem open to the world.

CHAPTER 14

Fostering a Healthy and Orderly Development Ecosystem

China will take a coordinated approach to promoting development and exercising regulatory management, strengthen the development of basic data systems and rules and of AI governance, and foster a development environment that is beneficial, secure and fair.

Section 1 Improving the Basic Systems for Data as a Production Factor

Basic systems for data as a production factor will be established and improved, covering data property rights, data circulation and utilization, income distribution and security governance. The system of structurally separating data property rights will be improved, and a unified national registration system for data property rights will be built. An open, shared and secure national integrated data market will be developed, rules and standards for data circulation and trading will be improved at a faster pace, the layout of data trading institutions will be optimized, and third-party professional service institutions will be developed in a well-regulated manner. A pricing mechanism for data as a production factor will be established, and a data income distribution mechanism that balances the interests of all parties will be explored. Laws and regulations in the data field will be improved, and rules for the management of data collection, storage, circulation and use will be improved. Classified and tiered data management will be implemented, and data security protection capabilities will be enhanced.

Section 2 Improving Sound and Effective Regulatory Mechanisms

The safety regulatory framework for new technologies and new forms of business will be improved, mechanisms for the development and adjustment of technical standards and for the tiered management of technology applications will be established, and multi-stakeholder collaborative governance will be advanced. Laws, regulations, policies, application norms and ethical guidelines in the field of AI will be improved; systems for algorithm filing, transparency management and security assessment will be strengthened; and rules will be explored for determining the ownership of rights in AI-generated content and the rights and responsibilities of developers, operators and users. A risk management system covering the entire life cycle of AI will be developed, and a risk prevention and control system covering security monitoring, risk early warning and emergency response will be improved. Innovation and healthy development of the platform economy will be promoted; regulation of platform enterprises in terms of data, algorithms, traffic and rules will be strengthened; and win-win development of platform enterprises, businesses operating on platforms and workers will be advanced. Acts such as data abuse, deepfakes and privacy disclosure will be cracked down on in accordance with the law.

Section 3 Expanding International Cooperation in the Digital and Intelligent Field

A global network of digital partnerships will be built, cooperation in areas such as e-commerce, digital payments and smart cities will be deepened, and the development of offshore computing power facilities and infrastructure for cross-border data flow services will be explored. China will actively participate in international governance in areas such as AI, digital currency and cross-border data flows, build greater consensus on data security, privacy protection and cross-border law enforcement cooperation, and strengthen international judicial coordination and mutual recognition of rules. China will promote the establishment of an AI governance framework with broad participation by all countries, work with others to build an open global AI ecosystem that upholds equal rights, mutual trust, diversity and mutual benefit, and support Global South countries in strengthening their AI capacity building.

PART 5

Building a Strong Domestic Market and Accelerating the Creation of a New Development Paradigm

China will uphold expanding domestic demand as the strategic focus, closely integrate efforts to improve people's wellbeing with efforts to boost consumption, and combine investment in physical assets with investment in people, let new demand guide new supply and new supply create new demand, promote sound interaction between consumption and investment and between supply and demand, achieve a dynamic balance between supply and demand at a higher level, and enhance the internal driving forces and reliability of domestic circulation.

CHAPTER 15

Vigorously Boosting Consumption

The special initiative to boost consumption will be carried out in depth; residents' consumption capacity will be strengthened and their willingness to consume improved; high-quality supply will be expanded to meet the consumption needs of different groups; and relatively rapid growth will be promoted in the consumption of goods and services across society.

Section 1 Consolidating the Foundation for Household Consumption

A coordinated approach will be taken to promoting employment, increasing incomes and stabilizing expectations, and a long-term mechanism for expanding household consumption will be formed at a faster pace. Employment capacity will be stabilized and expanded; enterprises will be supported in keeping existing jobs and creating new ones;

individuals will be supported in starting businesses and finding jobs; new professions and new jobs will be actively cultivated; and new employment space will be opened up in the digital economy, the green economy, the silver economy and other areas. Vigorous efforts will be made to increase the incomes of urban and rural residents; minimum wage standards will be raised steadily; the operating environment for small and micro businesses and self-employed individuals will be continuously improved; and the sound development of the housing and stock markets will be promoted. The social security safety net will be made more dense and robust; flexible workers and people in new forms of employment will be encouraged and supported to participate in employee insurance; the dynamic adjustment mechanism for subsistence allowance standards linked to per capita consumption expenditure will be improved and standardized; and more government funds will be allocated to spending that safeguards people's wellbeing.

Section 2 Unlocking the Potential of Service Consumption

Service consumption will be expanded with a focus on relaxing market access and integrating business formats, and new growth points in service consumption will be cultivated. The convenience of everyday service consumption will be improved; community-embedded services and 15-minute convenient living circles will be developed; traditional commercial districts will be renewed; and the service consumption experience in areas such as elderly care, childcare and household services will be improved. The share of development-oriented consumption will be raised; diversified and personalized service needs will be met; education and training consumption will be developed in a well-regulated manner; health consumption will be cultivated and expanded; and high-quality international service resources will be actively introduced. The vitality of upgrading consumption will be stimulated; consumption on culture, sports and tourism will be expanded; the approval and management of commercial performances and sports events will be optimized; the plan to upgrade ice and snow tourism will be implemented; leisure consumption such as cruise ships, yachts and recreational vehicle camping will be developed; and low-altitude consumption will be actively expanded. The integration of commerce, tourism, culture, sports and health will be deepened, and a number of immersive and interactive new consumption scenarios will be created.

Section 3 Expanding and Upgrading the Consumption of Goods

Brand leadership, standards upgrading and the application of new technologies will be strengthened; big-ticket consumption will be stabilized; consumer goods will be upgraded; and consumer demand at multiple levels will be met. Real estate policies will be optimized according to the conditions of each city, expectations will be stabilized through a combination of measures, the potential of essential and upgrading housing demand will be fully unleashed, and age-friendly renovation and intelligent upgrading of old housing will be supported. The shift of automobile consumption from purchase management to use management will be deepened; infrastructure such as battery charging and swapping facilities and parking lots will be improved; and aftermarket consumption such as automobile modification and leasing will be expanded. The development of

recycling systems for automobiles, electronic products, home appliances and furniture will be supported, and the circulation order of second-hand goods will be regulated. A digital consumption upgrading initiative will be implemented; the application of new smart products will be promoted; standards for smart home interoperability will be formulated; and flexible and customized production models for consumer goods will be promoted. Green consumption will be developed, and green and low-carbon products will be actively promoted. New growth points in mid- and high-end consumption will be cultivated; time-honored brands and trendy domestic brands will be made more refined and stronger; consumption of derivative merchandise will be developed; and the first-launch economy will be actively advanced.

Section 4 Continuing to Improve the Consumption Environment

Institutional mechanisms for promoting consumption will be improved; unreasonable restrictive measures in the consumption field will be sorted out; and management mechanisms suited to new consumption formats, models and scenarios will be established and improved. Inclusive policies that directly benefit consumers will be strengthened; the supply of financial services for consumption will be expanded; and a number of new consumption scenarios with broad spillover effects and high visibility will be created. The inbound consumption environment will be improved; departure tax refund stores will be promoted; international consumption center cities will be cultivated; and the "Shopping in China" campaign will be advanced. The system of paid annual leave for employees will be implemented; flexible staggered leave will be encouraged; and the introduction of spring and autumn holidays for primary and secondary school students will be explored. Consumer rights and interests will be better protected; channels for consumer complaints and rights protection will be kept open; business activities such as online sales and livestream marketing will be regulated; and the regulatory model for prepaid consumption will be improved. Full-caliber consumption statistics will be strengthened, and statistical monitoring of service consumption and new consumption formats and models will be improved.

CHAPTER 16

Expanding Effective Investment

China will accelerate the establishment of an endogenous growth mechanism for effective investment, maintain reasonable investment growth, improve the overall returns on investment, and better leverage the role of investment in supporting national strategies, optimizing the supply structure and meeting people's needs.

Section 1 Improving the Returns on Government Investment

Government investment will be structured to focus on improving people's wellbeing, shoring up weak links and building new growth drivers. "Hard investment" and "soft development" will be coordinated; the implementation of major national strategies and the building of projects to strengthen security capacity in key areas will be advanced to high standards; and a number of major landmark projects will be launched. Investment in human resource development and people's all-round development will be stepped up; a number of wellbeing projects will be implemented in areas such as services for the elderly and children, primary-level medical and health care, the expansion of general senior secondary education and high-quality higher education, and vocational skills training; and the share of government investment in people's wellbeing will be raised. In response to changes in the population structure and migration trends, the layout of infrastructure and public service facilities will be improved. In keeping with the requirements for developing new quality productive forces, investment in new infrastructure and intangible assets will be actively supported. Government investment will be managed throughout the whole process; the guiding role of strategic planning, project planning, reserve and feasibility assessment, and ongoing and ex post oversight will be strengthened; and excessive, premature construction and low-efficiency or ineffective investment will be avoided. The direction and priorities of central and local investment will be further clarified; all types of government investment will be used in a coordinated way; and localities with a solid foundation of work will explore the formulation of full-caliber government investment plans. The management of local government special bonds will be improved; the "self-review and self-issuance" mechanism will be refined; the proportion of such bonds used for project construction will be increased and specified separately; and the role of new types of policy-based financial instruments will be brought into play. Reform of the investment approval system will be deepened; the approval authority for government investment projects will be optimized; the catalogue of investment projects subject to government approval will be revised; and the efficiency of investment approval services will be improved.

Section 2 Stimulating the Vitality of Private Investment

Equal treatment, protection of rights and interests, and policy coordination will be upheld; the growth drivers of market-led effective investment will be strengthened; and the share of private investment will be increased. The long-term mechanism for private enterprises to participate in the construction of major projects will be improved; private enterprises will be encouraged and supported to participate in the construction of projects in fields such as railways, nuclear power, hydropower and water supply; and projects that meet the conditions will be encouraged to further raise the shareholding proportion of private enterprises. Private enterprises will be encouraged to increase investment in scientific and technological innovation and industrial upgrading, and application scenarios in emerging fields will be opened up to private enterprises. The lawful rights and interests of private enterprises in investment and operation will be protected in accordance with the law, and their needs for production factors such as land and financing will be met on an equal footing. The guiding and leveraging role of government

investment funds will be brought into play; layout planning and the guidance and evaluation of investment direction will be strengthened; and the mechanisms for investment, financing, management and exit will be improved.

Section 3 Promoting a Virtuous Cycle Between Investment and Consumption

With a focus on the points where investment and consumption connect, effective investment will be used to drive up consumption capacity and willingness, consumption upgrading will be used to guide the optimization of investment direction, and the combined effect of policies to expand domestic demand will be strengthened. Industries with a strong capacity to create jobs and raise incomes will be supported in expanding investment; the construction of facilities to improve consumption infrastructure and consumption service functions will be encouraged; and investment will be increased in building consumption scenarios and upgrading facilities in fields such as health and elderly care, sports and fitness, and leisure and entertainment. Transport hubs, industrial cluster areas and other locations will be encouraged to expand consumption functions in light of local conditions. The quality and efficiency of county-level commerce will be improved, and weak links in facilities such as logistics and warehousing and rural delivery services will be strengthened.

CHAPTER 17

Deepening the Building of a Unified National Market

China will resolutely remove bottlenecks and obstacles hindering the building of a unified national market, eliminate local protectionism and market segmentation, and promote the smooth flow of goods, factors and resources on a larger scale.

Section 1 Improving the Basic Systems and Rules of the Unified National Market

Institution building will be advanced in areas such as property rights protection, market access, information disclosure, social credit, mergers and reorganization, and market exit, in line with the requirements of a unified national market. The property rights of all forms of ownership will be protected on an equal footing, in accordance with the law and on a long-term basis, and acts that infringe on the economic property rights and lawful interests of any form of ownership will be dealt with under equal liability and the same punishment for the same offense. The protection and application of intellectual property rights will be strengthened, and rules and guidelines for protecting trade secrets in key areas will be formulated. The market access system will be improved; the negative list for market access will be revised dynamically; and the management requirement of "one list for the whole country" will be strictly implemented. Rules and systems for information disclosure concerning enterprise quality, safety and environmental protection will be improved. The functions of the national credit information sharing platform will be strengthened; the collection and sharing of credit information and the expansion of credit applications will be advanced in depth; and mechanisms for rewarding trustworthy behavior, punishing untrustworthy behavior and repairing credit will be improved. The enterprise bankruptcy system will be improved, and a simplified exit mechanism covering all business entities will be explored. Statistical, fiscal, tax and performance evaluation systems conducive to building a unified national market will be improved; statistics based on the place where business entities' activities occur will be promoted; and the sharing of benefits between enterprise headquarters and branches, and between places of production and places of consumption, will be optimized. Regulations on building a unified national market will be formulated.

Section 2 Safeguarding a Fair Competitive Market Order

Market regulation rules will be improved, benchmarks unified and capacities enhanced, so as to foster a market order in which quality is rewarded with better prices and competition is sound. Guidelines for fair competition compliance in key areas will be formulated; the rigid constraints of fair competition review will be strengthened; and barriers in areas such as access to factors, qualification recognition, bidding and tendering, and government procurement will be eliminated. Local government conduct in promoting economic development will be regulated; a list of encouraged and prohibited matters for

local government investment attraction will be formulated; and information disclosure on investment attraction will be strengthened. The system for dynamically updating the list of matters that hinder the building of a unified national market and for reporting and holding relevant parties accountable will be improved. Anti-monopoly and anti-unfair competition law enforcement and judicial work will be strengthened, and anti-monopoly guidelines for key areas will be formulated. A coordinated and unified national standards system will be improved; the coverage of mandatory national standards will be expanded; standards for emerging industries will be developed; and the internationalization of standards will be raised. The sharing of inspection, testing and certification resources, mutual recognition of qualifications and mutual acceptance of results will be promoted. Market regulation and law enforcement will be unified; the system of benchmarks for administrative discretion will be improved; and two-way linkage between administrative penalties and criminal penalties will be advanced. The administrative reconsideration system and mechanisms will be improved. Comprehensive law enforcement systems and mechanisms will be improved; the tiered arrangement of regulatory matters will be optimized; and the effectiveness of law enforcement at the grassroots level will be increased.

Section 3 Promoting High-Standard Connectivity of Market Facilities

Circulation and logistics, market information, trading platforms and other facilities will be made more interconnected, and their rules better aligned. An efficient and smooth modern circulation system will be improved; the national logistics hub network will be refined; a number of key circulation corridors for important commodities will be built relying on strategic pivot cities for modern circulation; regions with suitable conditions will be supported in building resource allocation hubs for bulk commodities; integrated circulation rules and standards will be improved; and logistics costs across society will be reduced. Facilities and standards for multimodal transport will be strengthened and information sharing promoted; the “one document” and “one container” systems will be vigorously advanced; and rail-water intermodal transport of containers and bulk materials will be promoted. Channels for the exchange of market information will be improved, and a whole-chain mechanism for information trust and application will be developed. A unified, standard and information-sharing system of public resource trading platforms for bidding and tendering and for procurement by government departments, public institutions and state-owned enterprises will be established and improved; the application of AI and big data-based regulation will be advanced; and open management of projects throughout the entire process will be achieved.

PART 6

Accelerating the Building of a High-Standard Socialist Market Economy and Strengthening the Driving Forces for High-Quality Development

China will uphold and improve the basic socialist economic system, better leverage the leading role of economic structural reform, build a high-standard market system, improve the effectiveness of macroeconomic governance, promote the optimal allocation and maximum returns of resources, stimulate the internal driving forces and innovative vitality of society as a whole, and ensure steady and sustained progress in high-quality development.

CHAPTER 18

Fully Stimulating the Vitality of All Types of Business Entities

China will uphold and implement the "two unswervings," promote complementarity of strengths among economic sectors under all forms of ownership, and advance their common development.

Section 1 Deepening the Reform of State-Owned Capital and State-Owned Enterprises

State-owned enterprises and state-owned capital will be made stronger, better and larger; the core functions of state-owned enterprises will be enhanced; and their core competitiveness will be raised. A catalogue guiding the optimization of the layout and structural adjustment of the state-owned economy will be formulated and implemented,

and state-owned capital will be channeled toward important industries and key areas that bear on national security and the lifelines of the national economy, toward public services, emergency response capacity and public-interest fields that bear on the national economy and people's wellbeing, and toward forward-looking strategic emerging industries, with strategic restructuring and specialized consolidation stepped up. Classified reform of state-owned enterprises will be deepened; the functional positioning of different types of state-owned enterprises will be further clarified; management of their main responsibilities and core business will be strengthened; an evaluation system for the fulfillment of strategic missions by state-owned enterprises will be established; and a governance system of classified assessment will be developed. State-owned enterprises will be encouraged to improve market-based operating mechanisms and enhance their value creation capacity. Institutional arrangements for state-owned enterprises to advance original innovation will be improved. The state-owned assets supervision system will be improved, and state-owned capital investment and operation companies will be better positioned to play their role. The value-added accounting system for the state-owned economy and state-owned enterprises will be improved. State-owned enterprises and private enterprises will be supported in conducting equity cooperation, strategic collaboration and resource integration in a standardized, market-based manner.

Section 2 Developing and Expanding the Private Economy

The Law on Promoting the Private Economy will be implemented and supporting laws, regulations, policies and systems will be improved, so as to guarantee by law and by institutional arrangements equal access to production factors, fair participation in market competition and effective protection of lawful rights and interests. Competitive areas of infrastructure will continue to be opened fairly to private enterprises. Capable private enterprises will be supported in taking the lead in undertaking major national technological breakthrough tasks, and major national scientific research infrastructure and public R&D platforms will be opened further to private enterprises. Policies supporting financing for private enterprises will be improved; the role of the national integrated financing credit service platform network will be brought into play; and the comprehensive credit evaluation system and the credit enhancement system will be improved. Small and medium-sized enterprises and self-employed individuals will be supported in their development, and the coordinated and integrated development of large, medium and small enterprises will be promoted. The "Jinjiang experience" will be developed through innovation; a comprehensive service system for the development of the private economy will be improved; and mechanisms for regular government-enterprise communication and problem solving will be refined. Private enterprises will be guided to improve their governance structures and management systems, and the healthy development of the private economy and the healthy growth of people working in the private economy will be promoted. The statistical monitoring system for the private economy will be improved.

Section 3 Actively Fostering a First-Class Business Environment

Continuous efforts will be made to improve and upgrade the business environment and create a first-class business environment that is market-oriented, law-based and internationalized. The service system for enterprises will be improved; the list management and routine advancement mechanism for key matters under the "handle one matter efficiently in one go" reform will be improved; enterprise-benefiting policies will be handled fully online and delivered directly and promptly; and the credit commitment system will be promoted. Reform of the registered capital subscription registration system will be deepened, and business-related operating permits will be continuously streamlined. A long-term mechanism for regulating law enforcement involving enterprises will be improved; unlawful cross-jurisdictional law enforcement and profit-driven law enforcement will be prevented and corrected; and joint law enforcement approaches such as "one comprehensive inspection" will be promoted. Law enforcement and judicial protection of property rights will be strengthened, and judicial supervision over coercive measures such as sealing, seizure and freezing will be enhanced. A long-term mechanism for clearing arrears owed to enterprises will be established and improved, and complaint channels for government breach of contract and broken promises will be kept open. The modern enterprise system with Chinese characteristics will be improved, the entrepreneurial spirit will be promoted, and the building of more world-class enterprises will be accelerated.

CHAPTER 19

Accelerating the Improvement of the Systems and Mechanisms for the Market-Based Allocation of Production Factors

China will deepen market-oriented reform of production factors, keep channels open for their orderly flow, coordinate the optimization of incremental factors with the revitalization of existing factors, and promote the efficient allocation of all types of factor resources.

Section 1 Improving the Systems and Rules of the Factor Market

The factor market system will be improved, and the scope of market-based factor allocation will be expanded. Reform of the land system will be deepened, and a unified urban and rural market for construction land will be established and improved. The functions of the capital market will be improved so that investment and financing are coordinated; basic systems such as issuance and listing, information disclosure, mergers and acquisitions, and delisting will be optimized; the quality of listed companies will be improved; and a long-term mechanism for enhancing intrinsic stability will be established. Channels for the social mobility of labor and talent will be kept open, and institutional obstacles relating to household registration, social security, professional titles and personnel files will be gradually removed. A nationally integrated technology market and data market will be cultivated. The comprehensive pilot reform for the market-based allocation of production factors will be deepened and expanded, and a number of replicable and transferable institutional outcomes will be produced at a faster pace.

Section 2 Improving the Pricing Mechanisms for Resource Factors

Pricing mechanisms that are mainly determined by market supply and demand will be improved, and price governance will be strengthened and improved. Pricing mechanisms suited to a new energy system will be improved at a faster pace; market-based reform of the on-grid prices of various types of power generation will be advanced by category and at an appropriate pace; the pricing mechanism for refined oil products will be improved; reform of natural gas pricing will be deepened; policies for regulating coal prices within a range will be improved; and price regulation of network-type natural monopoly segments will be strengthened. Reform of water pricing for water conservancy projects will be deepened. Public utility pricing mechanisms that promote sustainable development will be improved, and the systems of tiered residential water, electricity and gas pricing will be optimized. Reform of public service pricing will be deepened, and charging policies for services such as elderly care will be improved. The development of pricing mechanisms for new types of production factors will be explored.

Section 3 Revitalizing and Utilizing Existing Resources

Policies on mergers and acquisitions, bankruptcy and asset swaps will be improved, and inefficiently used land, idle properties and existing infrastructure will be revitalized and put to good use. Macro balance sheets will be compiled, a full picture of existing resource assets will be obtained, and asset-liability structures will be optimized. Pilot programs for redeveloping inefficiently used land will be deepened and expanded; planning controls, land supply and tax and fee policies that facilitate the revitalization of existing land will be improved; and the secondary market for construction land will be developed at a faster pace. Mixed land development, composite use of space and lawful and reasonable conversion of land use purposes will be promoted; laws and regulations on the renewal of land use rights for industrial and commercial land will be improved; and renewal work will be advanced steadily in accordance with the law. The revitalization and sharing of existing state-owned assets held by administrative departments and public institutions across the country will be promoted; mechanisms for revitalizing existing assets in industrial parks and promoting their high-quality development will be improved; supporting policies such as asset valuation will be refined; non-governmental actors will be brought in to improve the efficiency of revitalization and utilization; and market-based operating procedures will be standardized. The execution of judicial judgments will be linked organically with the bankruptcy system, and sealed or frozen property will be effectively revitalized in accordance with the law. The regular recommendation and issuance of real estate investment trusts (REITs) in the infrastructure sector will be actively promoted.

CHAPTER 20

Improving the Macroeconomic Governance System

China will improve the level of macroeconomic regulation and government governance, and promote a shift toward development models in which domestic demand plays the leading role, consumption drives growth and growth is internally generated.

Section 1 Improving the Macroeconomic Regulation System

The strategic guiding role of national development planning will be strengthened; fiscal and monetary policies will be better coordinated; the roles of industrial, pricing, employment, consumption, investment, trade, regional, environmental protection and regulatory policies will be brought into play; and the consistency and effectiveness of the orientation of macro policies will be enhanced. Counter-cyclical and cross-cyclical adjustments will be strengthened, a more proactive macro policy will be implemented, the scale of government debt will be determined appropriately, ample liquidity will be maintained, and growth, employment and expectations will be continuously stabilized. The system of macroeconomic regulation targets will be improved; short-term and medium- to long-term targets, and aggregate balance and structural adjustment, will be coordinated; and the linkage between annual plans and national development planning will be strengthened. The expectations management mechanism will be improved, and expectations management will be incorporated into the entire process of macroeconomic governance. Economic monitoring, forecasting and early warning will be strengthened; the policy toolkit will be enriched and improved; the intensity and timing of policies will be handled in a well-calibrated manner; and evaluation of the effects of policy implementation will be strengthened. The management of national macro balance sheets will be explored. The comprehensive performance assessment for high-quality development will be optimized.

Section 2 Improving the Modern Fiscal System

Reform of the fiscal and tax systems will be deepened; the role of proactive fiscal policy will be brought into play; scientific fiscal management will be strengthened; and fiscal sustainability will be enhanced. Macro-level guidance over budget preparation and fiscal policy will be strengthened; the role of medium-term fiscal plans in balancing budgets across years will be brought into play; and fiscal resources will be firmly secured for major national strategic tasks and for meeting basic living needs. Fiscal resources and budgets will be better coordinated; greater efforts will be made to coordinate government fund budgets, state capital operations budgets and general public budgets; the state capital operations budget system will be improved; the proportion of state-owned capital returns collected will be raised appropriately; and all revenue obtained by virtue of administrative power, government credit and state-owned resources and assets will

be incorporated into government budget management. The structure of fiscal expenditure will be optimized, and the share of spending on public services within total fiscal expenditure will be raised appropriately. The reform of zero-based budgeting will be deepened; budget allocation authority will be unified; the expenditure standards system and its dynamic adjustment mechanism will be improved; and budget performance management and oversight of budget execution will be strengthened. The tax system structure will be optimized; a tax system conducive to high-quality development, social fairness and market unification will be improved; and the overall tax burden will be kept at a reasonable level. The proportion of direct taxes will be raised; the personal income tax system that combines comprehensive and classified taxation will be improved; the scope of comprehensive taxation will be gradually expanded; and tax policies for business income, capital income and property income will be improved. The VAT credit refund policy and the deduction chain will be improved, and the sharing ratio of shared taxes will be optimized. Tax systems suited to new forms of business will be studied. The local tax system will be improved; the point of collection of consumption tax will be moved downstream and the tax will be steadily devolved to local governments; and local governments' own fiscal resources will be increased. Central government authority will be appropriately strengthened, the share of central fiscal expenditure will be raised, and central fiscal responsibilities delegated to local governments will be reduced. The fiscal transfer payment system will be improved, and the structure of fiscal transfer payments will be optimized. The principle of statutory taxation will be fully implemented; preferential tax policies will be regulated; and financial and accounting oversight will be strengthened. A long-term mechanism for government debt management suited to high-quality development will be established at a faster pace.

Section 3 Accelerating the Building of a Financial Powerhouse

With a commitment to preventing risks, strengthening regulation and promoting high-quality development, the building of a modern financial system with Chinese characteristics will be accelerated. The central banking system will be improved; a scientific and prudent monetary policy system will be developed; the mechanism for injecting base money will be improved; the market-based mechanisms for interest rate formation, regulation and transmission will be improved; and the growth of aggregate financing to the real economy and the money supply will be kept in line with economic growth and the expected target for the overall price level. A comprehensive macro-prudential management system will be established, and more financial activities and financial markets will be incorporated into the macro-prudential policy framework. The flexibility of the RMB exchange rate will be enhanced, and the exchange rate will be kept basically stable at a reasonable and balanced level. The quality and effectiveness of financial services for the real economy will be improved; vigorous efforts will be made to develop sci-tech finance, green finance, inclusive finance, pension finance and digital finance; and high-quality financial services will be strengthened for major strategies, key areas and weak links. The system of structural monetary policy instruments will be improved. Comprehensive reform of investment and financing in the capital market will be deepened continuously; the institutional inclusiveness and adaptability of the capital market will be enhanced;

and the proportion of direct financing will be increased. Diversified equity financing will be developed; the building of a multi-tiered bond market will be accelerated; futures, derivatives and asset securitization will be developed steadily; and trading regulation and investor protection will be strengthened. Patient capital will be expanded, and the policy system supporting the entry of medium- and long-term funds into the market will be improved. The financial institution system will be optimized; financial institutions of all types will be encouraged to focus on their core business, improve governance and pursue differentiated development; large state-owned financial institutions will be supported in improving their comprehensive service levels; access standards and regulatory requirements for small and medium-sized financial institutions will be tightened; and first-class investment banks and investment institutions will be cultivated. Safe and efficient financial infrastructure will be built. The digital renminbi will be developed steadily. The building of the Shanghai International Financial Center will be accelerated. Financial regulation will be strengthened across the board, a risk prevention and resolution system will be developed, and the sound operation of the financial sector will be safeguarded.

PART 7

Expanding High-Level Opening Up and Opening New Prospects for Win-Win Cooperation

China will uphold openness, cooperation and mutual benefit, steadily expand institutional opening up, build a new system of a higher-standard open economy, advance high-quality Belt and Road cooperation, expand international circulation, promote reform and development through opening up, advocate an equal and orderly multipolar world and a universally beneficial and inclusive economic globalization, and share opportunities and pursue common development with all countries.

CHAPTER 21

Actively Expanding Self-Initiated Opening Up

China will expand opening up in alignment with high-standard international economic and trade rules, promote connectivity and compatibility between domestic and international rules, regulations, management and standards, and foster a transparent, stable and predictable institutional environment.

Section 1 Orderly Expanding the Sectors and Regions Open to the World

With the services sector as the focus, China will expand market access and the areas open to foreign participation, opening up on a larger scale, in wider fields and at greater depth. It will promote the orderly expansion of opening up in telecommunications, the internet, education, culture, healthcare and other fields, prudently carry out pilot opening programs in value-added telecommunications, biotechnology, wholly foreign-owned hospitals and other areas, and advance comprehensive pilot demonstrations for expand-

ing the opening up of the services sector. It will shorten the negative list for foreign investment access and strengthen coordination between negative list revision and opening up pilots. It will steadily and prudently expand mutual connectivity of financial markets, improve the qualified foreign investor system, broaden the range of investable products, orderly advance two-way cross-border direct financing by eligible enterprises, and support cross-border investment by equity investment funds. It will promote the efficient, convenient and secure cross-border flow of data. It will improve visa and residence policies and make digital services more convenient for foreign nationals entering China. It will advance renminbi internationalization, expand the use of the renminbi in international trade and investment and financing, raise the level of capital account opening, build an independent and controllable cross-border renminbi payment system, and develop offshore renminbi markets. In fields where conditions permit, China will take the lead in implementing the opening up measures of high-standard economic and trade agreements and will, for the least developed countries and economic and trade partners with strong potential for cooperation, expand the sectors and regions covered by unilateral opening up.

Section 2 Building Institutional and Regulatory Systems Compatible with High-Standard Economic and Trade Rules

China will promote efficient coordination between high-level opening up and in-depth reform and accelerate legislation and legal amendments, policy adjustments and standard revisions in key fields. It will improve intellectual property protection mechanisms aligned with international rules, explore expanding the scope of trademark protection, improve copyright protection mechanisms, and broaden channels for resolving intellectual property disputes. It will promote international mutual recognition of rules and standards for key products, including energy efficiency, water efficiency and carbon footprint, and advance the disclosure of corporate climate and environmental information in accordance with the law as well as voluntary disclosure. It will explore ways to improve labor protection mechanisms that suit China's national conditions and conform to international practice. It will accelerate reform of the government procurement system and fully implement the principle of fair competition. It will take the lead in piloting the WTO Agreement on Electronic Commerce and the Agreement on Investment Facilitation, and improve the efficiency of cross-border payment and settlement as well as the level of electronic and standardized documentation.

Section 3 Improving the Regional Layout of Opening Up

China will build open highlands of diverse forms and accelerate the creation of a comprehensive opening up pattern in which land and sea, and domestic and international markets, are interconnected and the eastern and western regions reinforce each other. It will build the Hainan Free Trade Port to high standards, implement island-wide special customs operations at a high level, continue to raise the level of opening up in key areas such as trade, investment and the flow of production factors, and gradually establish a policy and institutional system suited to a high-standard free trade port. It will

implement the strategy for upgrading pilot free trade zones, carry out more vigorous experiments in institutional opening up, and strengthen their capacity to drive development through innovation. It will make coordinated plans for the development of major opening up and cooperation platforms for scientific and technological innovation, trade in services and industrial development, support the optimization and integration of platforms with similar functions in neighboring locations, promote innovation in the management systems and operating models of state-level new areas and development zones, facilitate the transformation and upgrading of comprehensive bonded zones, and advance the building of key development and opening up pilot zones in border areas, industrial collaboration parks, border and near-port industrial parks, and border (cross-border) economic cooperation zones.

Box 11 Enhancing the Functions of Opening-up Platforms

01 Hainan Free Trade Port

Implement more open policies on personnel, transport, finance and data, and deepen reform in key areas such as the tax system and the administrative system. Build a world-class commercial space launch site and raise the level of openness of the international medical tourism pilot zone and the international education innovation pilot zone.

02 Pilot Free Trade Zones

Optimize the layout and scope of pilot free trade zones, assign new reform pilot tasks in light of actual conditions, deepen differentiated exploration, and promote the replication and extension of reform results. Promote qualified pilot free trade zones to carry out more pioneering trials in areas such as the digital economy, scientific and technological innovation, and offshore trade.

03 Border Cooperation Platforms

Build industrial cooperation parks in Qinzhou–Fangchenggang of Guangxi, Ruili of Yunnan, Ili of Xinjiang, Manzhouli of Inner Mongolia and Mudanjiang of Heilongjiang to high standards. Establish key development and opening-up pilot areas in Heihe, Gyirong, Dandong, Kashgar and Alataw Pass.

04 Border Ports

Complete the Heixiazi Island and Shuangmufeng highway ports and the Ganqimaodu railway port. Upgrade and renovate the Ji'an, Manzhouli, Erenhot, Mohan, Hekou and Mengding Qingshuihe highway ports and the Suifenhe railway port.

05 China–Europe (Central Asia) Freight Train Assembly Centers

Support the building of 14 China–Europe (Central Asia) freight train assembly centers and hub cities, including Shenyang, Tianjin–Shijiazhuang, Jinan–Qingdao, Lianyungang–Xuzhou, Jinhua (Yiwu), Hefei, Zhengzhou, Wuhan, Changsha, Guangzhou, Chengdu–Chongqing, Kunming, Xi'an and Urumqi.

CHAPTER 22

Improving the Quality and Level of Trade and Investment Cooperation

China will strengthen coordination between imports and exports, place equal importance on goods and services, coordinate efforts to attract foreign investment with outbound investment, and foster new strengths in international trade and two-way investment cooperation.

Section 1 Promoting Innovative Development of Trade

China will move faster to build itself into a strong trading nation, improve the quality and efficiency of foreign trade, and promote balanced development of imports and exports. It will optimize and upgrade trade in goods, diversify markets, expand trade in intermediate goods, and upgrade processing trade. It will vigorously develop trade in services, improve the negative list management system for cross-border trade in services, relax restrictions on cross-border services such as cross-border delivery and the movement of natural persons, encourage service exports, strengthen the international competitiveness of transport, travel and other services, develop knowledge-intensive trade in services, actively develop service outsourcing, and raise the standardization level of trade in services. It will appropriately adjust import tariff rates, revise the catalogue of technologies, products and services encouraged for import, and expand imports of advanced technology and equipment, high-quality agricultural products, producer services and other goods and services that are urgently needed domestically. It will develop digital trade and green trade through innovation and orderly expand opening up in the digital field. It will support the development of new business forms and models such as cross-border e-commerce, improve the layout and functions of overseas warehouses, and improve the policy environment for bonded maintenance and remanufacturing, new types of offshore trade and other activities. It will advance regulatory innovation in customs clearance, taxation and foreign exchange, and promote international cooperation on standards, conformity assessment, and inspection and quarantine for foreign trade products. It will enhance the functions of trade promotion platforms, increase support through export credit and credit insurance, and continue to host major exhibitions such as the China International Import Expo, the China Import and Export Fair and the China International Fair for Trade in Services. It will promote the integrated development of domestic and foreign trade and deepen reform of standards and certification for domestic and foreign trade. It will strengthen trade risk prevention and control and responses to trade frictions, enrich policy tools such as trade adjustment assistance and trade remedies, and improve the export control system.

Section 2 Attracting and Utilizing Foreign Investment with Greater Effort

China will continue to improve the environment for foreign investment, improve its service and support system for foreign investment, and foster new strengths in attracting foreign investment. It will fully implement national treatment for foreign-funded enterprises, clean up documents and regulations inconsistent with the Foreign Investment Law, and ensure that market access is matched by permission to operate. It will leverage the demonstration effect of landmark foreign investment projects, guide more foreign investment toward advanced manufacturing, modern services, high and new technologies, energy conservation and environmental protection and other fields, support foreign-funded enterprises in joining upstream and downstream supporting cooperation within industrial chains, and vigorously attract them to set up regional headquarters and R&D centers in China. It will encourage foreign investors to reinvest in China. It will carefully cultivate the "Invest in China" brand. It will expand the ways in which foreign investment is utilized, improve the administration of foreign mergers and acquisitions, and broaden channels for foreign investment in the securities market. It will conduct foreign investment security reviews with high quality. It will improve the full-scope foreign debt supervision system and the statistics and information reporting systems for foreign investment, and strengthen information sharing.

Section 3 Promoting International Industrial and Investment Cooperation

China will effectively administer outbound investment, improve the comprehensive overseas service system, promote the integration of trade and investment, and guide the rational and orderly cross-border layout of industrial and supply chains. It will further guide and regulate the direction of enterprises' overseas investment, support qualified enterprises in carrying out mutually beneficial overseas investment cooperation, and encourage enterprises in emerging industries such as internet platforms and artificial intelligence to expand overseas application scenarios. It will support professional service institutions providing consulting and evaluation, legal services, accounting and auditing, credit rating, mediation and arbitration in expanding their overseas service networks, and improve the system for protecting intellectual property rights in foreign-related matters. It will strengthen protection of the lawful overseas interests of Chinese citizens and legal persons, establish a system for responding to requests and for protection and relief, and improve the system for protecting overseas interests. It will give play to the role of overseas economic and trade cooperation zones and promote their coordinated development with domestic parks. It will strengthen security reviews of outbound investment and improve the mechanisms, laws and regulations for monitoring, preventing and handling outbound investment risks, and help enterprises improve their capacity for risk prevention and compliance management.

CHAPTER 23

High-Quality Belt and Road Cooperation

China will uphold the guiding principles of extensive consultation, joint contribution and shared benefits, of openness, green development and integrity, and of high standards, improved living standards and sustainability; improve the mechanisms for advancing high-quality Belt and Road cooperation; and deepen "hard connectivity" of infrastructure, "soft connectivity" of rules and standards, and "heart connectivity" with the people of Belt and Road partner countries.

Section 1 Deepening the Alignment of Development Strategies

China will strengthen policy communication and strategic alignment with Belt and Road partner countries and international organizations, strengthen the coordinated management of cooperation plans, and enhance implementation coordination and evaluation. It will give play to the leading role of the Belt and Road Forum for International Cooperation and strengthen the development of cooperation platforms in energy, taxation, poverty reduction, think tanks, the media and other fields. It will deepen exchanges of governance experience with Belt and Road partner countries and increase exchanges among entrepreneurs, experts and scholars, young people and other groups. It will coordinate multilateral and bilateral cooperation, develop new models of Belt and Road cooperation, consolidate existing cooperation outcomes, and expand space for win-win development.

Section 2 Improving the Layout of a Multidimensional Connectivity Network

China will deepen cooperation on major economic corridors and hub ports and keep the diverse land, maritime, air and cyberspace channels open and unimpeded. It will raise the level of development of China-Europe (Central Asia) freight trains and actively participate in building the Trans-Caspian International Transport Route. It will build the China-Kyrgyzstan-Uzbekistan Railway, the Hungary-Serbia Railway and other projects to high standards. It will advance the integrated development of ports, shipping and trade under the "Maritime Silk Road," promote higher quality and greater efficiency in building the Air Silk Road, and strengthen cooperation on building the Space Information Corridor. It will actively promote the application of Chinese standards overseas. It will further advance the development of the core areas of the Belt and Road in Xinjiang and Fujian.

Section 3 Comprehensively Improving the Quality and Effectiveness of Practical Cooperation

China will continue to expand trade and investment cooperation with Belt and Road partner countries and build cooperation pilot zones for "Silk Road e-commerce" to high standards. It will open up new space for cooperation in green development, artificial intelligence, the digital economy, health, tourism, agriculture, meteorology, BeiDou applications and other fields. It will advance major landmark projects and "small and beautiful" livelihood projects in a coordinated manner. It will improve a diversified, sustainable and risk-controllable investment and financing system and actively support the Asian Infrastructure Investment Bank, the New Development Bank and the Silk Road Fund in playing their roles. It will expand channels for people-to-people and cultural exchanges with Belt and Road partner countries in culture, education, archaeology, sports and other fields, and implement the Belt and Road Science, Technology and Innovation Cooperation Action Plan to high standards. It will enhance its capacity for risk prevention and control, deepen efforts to build a clean Silk Road, and promote higher-quality Belt and Road cooperation that is more orderly, more standardized, safer and more sustainable.

CHAPTER 24

Advancing the Building of a Community with a Shared Future for Mankind

China will implement the Global Development Initiative, the Global Security Initiative, the Global Civilization Initiative and the Global Governance Initiative, actively advance major-country diplomacy with Chinese characteristics, and make China's contribution to building a community with a shared future for mankind.

Section 1 Actively Participating in and Leading Global Economic Governance

China will advance reform of global economic and financial governance and work to build and uphold an international economic order that is fair and just, open and inclusive, and mutually beneficial. It will safeguard the multilateral trading system with the World Trade Organization at its core, participate comprehensively and in depth in WTO reform, and resolutely oppose protectionism, the arbitrary imposition of tariffs and similar practices. It will expand the global network of high-standard free trade areas, implement the Regional Comprehensive Economic Partnership to high standards and advance its enlargement and review processes, push for the implementation of version 3.0 of the China-ASEAN Free Trade Area, actively seek to join the Comprehensive and Progressive Agreement for Trans-Pacific Partnership and the Digital Economy Partnership Agreement, and promote the negotiation and signing of more regional and bilateral trade and investment agreements. It will actively put forward Chinese proposals for international rules in emerging fields such as artificial intelligence, the digital economy, green and low-carbon development, and outer space. It will strengthen international macroeconomic policy coordination, promote the role of the G20 as the premier forum for international economic cooperation, expand the influence of cooperation mechanisms such as BRICS and the Shanghai Cooperation Organization, actively participate in Asia-Pacific Economic Cooperation, and advance the building of the Free Trade Area of the Asia-Pacific.

Section 2 Promoting the Building of a New Type of International Relations

China advocates and practices true multilateralism, firmly upholds the international system with the United Nations at its core, the international order based on international law, and the basic norms of international relations based on the purposes and principles of the UN Charter, and will expand its global network of partnerships and steer the international order toward greater fairness and justice. It will deepen integrated development in the neighborhood, strengthen common security, consolidate strategic mutual trust, and build a community with a shared future with neighboring countries. It will promote coordination and sound interaction among major countries and maintain the overall stability of major-country relations. It will deepen solidarity and cooperation with

developing countries and support the Global South in seeking strength through unity. It will create multi-level, multi-field mechanisms and platforms for dialogue and exchanges among civilizations and work with others to build a global network for dialogue and cooperation among civilizations. It will promote the common values of humanity and work for a world of lasting peace, universal security, common prosperity, openness and inclusiveness, and clean and beautiful environments.

Section 3 Providing More International Public Goods

China will play its role as a responsible major country and take a more active part in addressing global issues such as climate change, transnational crime, cybersecurity, major infectious diseases and terrorism. It will resolutely oppose hegemonism, high-handedness and bullying, uphold international fairness and justice, and safeguard the common interests of the peoples of all countries. It will actively participate in formulating global security rules, take a constructive part in the political settlement of international and regional hotspot issues, strengthen international security cooperation in food, energy, data, biosafety, land and maritime corridors, counterterrorism and other fields, and promote the improvement of global security governance. It will promote global cooperation on poverty reduction, strengthen the development of the foreign aid system and full-chain management, and increase foreign aid. It will implement the UN 2030 Agenda for Sustainable Development.

PART 8

Accelerating Agricultural and Rural Modernization and Steadily Advancing Rural Revitalization in All Respects

China will continue to prioritize agricultural and rural development and integrated urban-rural development, improve the long-term mechanisms for advancing rural revitalization in all respects, vigorously develop modern agriculture, ensure that rural areas are generally equipped with modern living conditions, continue to consolidate and build on the results of poverty alleviation, narrow the urban-rural development gap, and move faster to build a strong agricultural country.

CHAPTER 25

Enhancing Comprehensive Agricultural Production Capacity, Quality and Efficiency

China will give equal attention to output and production capacity, to production and the environment, and to higher yields and higher incomes; promote the alignment of production with demand, structural optimization and quality improvement; and raise agricultural labor productivity and the contribution of scientific and technological progress.

Section 1 Strengthening the Supply Guarantee of Grain and Other Important Agricultural Products

China will further implement the strategy of storing grain in the land and in technology, step up efforts in the new round of action to boost grain production capacity by 100 billion jin, stabilize rice and wheat production, increase the production capacity of corn and soybeans, and work to raise per-unit yields of grain, edible oil and other major crops

across large areas. In response to changes in supply and demand, it will optimize the structure of agricultural production, steadily develop the production of important agricultural products such as cotton, edible oil, sugar and natural rubber, and of "shopping basket" products, and develop agriculture with distinctive local features. It will improve the "three-in-one" protection system covering the quantity, quality and ecology of arable land, strictly manage the balance between the occupation and compensation of arable land, improve the quality acceptance mechanism for newly added arable land, and coordinate the optimization of the layout of agricultural land. It will advance high-quality construction and maintenance of high-standard farmland, improve farmland irrigation and drainage systems, strengthen black soil protection and the treatment of acidified farmland, and steadily advance the comprehensive utilization of saline-alkali land. It will strengthen agriculture's capacity for disaster prevention and mitigation and launch a new round of agricultural resource zoning.

Section 2 Strengthening Support from Agricultural Science and Technology and Equipment

China will pursue coordinated development of technology-driven, green, quality-oriented and brand-based agriculture and build agriculture into a modern major industry. It will further implement the action to revitalize the seed industry, strengthen the protection and utilization of germplasm resources, improve the commercial breeding system, intensify collaborative efforts to make breakthroughs in breeding, cultivate new varieties that are high-yielding, high-quality, resistant to stress and widely adaptable, and improve the level of seed source security. It will implement the action for high-quality development of agricultural machinery and equipment, promote the integrated and more efficient application of good farmland, good seed, good machinery and good methods, and raise the comprehensive mechanization rate of plowing, sowing and harvesting to over 80%. It will strengthen efforts to make breakthroughs in core technologies in key fields such as core seed sources, agricultural machinery and equipment, and agricultural water conservation; build a well-tiered agricultural science and technology innovation system based on division of labor and collaboration with appropriate competition; and cultivate leading agricultural science and technology enterprises. It will improve the agricultural technology extension system that combines public welfare services with commercial services, and actively promote geographical indication products and brands.

Section 3 Building a Diversified Food Supply System

China will develop farming, forestry, animal husbandry and fisheries in parallel and tap food resources through all channels and by multiple means. It will strengthen comprehensive regulation of hog production capacity, improve the quality and efficiency of the beef cattle, mutton sheep and dairy cattle industries, and accelerate the transformation and upgrading of grassland animal husbandry. It will accelerate the development of the forage industry and expand the production of silage. It will develop modern facility agriculture, promote energy-conserving, machinery-friendly and highly efficient

facility-based cultivation, and advance intensive livestock and poultry farming. It will scientifically develop food resources from rivers, lakes, seas and forests, develop high-quality aquaculture, steadily expand the production of woody grain and oil crops, develop the under-forest economy, expand the forest and grass industries, and raise the level of mechanization. It will actively develop synthetic biology technologies and expand new sources of protein.

CHAPTER 26

Building Beautiful and Harmonious Villages That Are Good Places to Live and Work

China will study and apply the experience of the "Ten Million Project," advance rural revitalization in a categorized, orderly and area-based manner, further implement the rural construction action, and gradually make rural infrastructure more complete, public services more convenient and the living environment more comfortable.

Section 1 Creating High-Quality Living Space in Rural Areas

China will scientifically plan the layout of infrastructure and public services with the county as the unit and promote the integrated planning, construction and maintenance of infrastructure within counties. It will coordinate and optimize the layout of villages and towns, guide the appropriate concentration of population and industries, improve the implementation mechanisms for rural construction in light of local conditions, and rationally arrange construction priorities and sequencing. It will advance coordinated territorial space governance at the county level, steadily carry out comprehensive land consolidation across entire areas, and provide land for rural development according to category. It will make solid progress in building and maintaining rural facilities for roads, water supply, sewage treatment, energy, logistics and information, and continue to renovate dilapidated rural houses. It will improve the operating conditions of regular senior secondary schools and boarding schools in counties, advance the building of tight-knit county-level medical communities with a focus on channeling medical personnel to the grassroots, improve the three-tier elderly care service network at the county, township and village levels, support the provision of flexible forms of basic public services to rural areas in remote regions, and make coordinated use of existing rural facility resources. It will continue to improve the rural living environment and, with perseverance, solve problems such as rural toilet renovation and garbage encroaching on villages.

Section 2 Developing County-Level Industries That Enrich the People

China will develop county economies with distinctive features, promote the deep integration of primary, secondary and tertiary industries in rural areas, cultivate agricultural powerhouse counties, major industrial counties and renowned tourism counties in light of local conditions, and promote the integrated development of industry, county strength and people's prosperity. It will promote the transformation and upgrading of agricultural product processing, strengthen the development of agricultural product markets and distribution networks, and improve storage, preservation and cold-chain logistics systems. It will unlock the multiple functions of agriculture and cultivate and strengthen rural industries with distinctive features and new industries and business forms such as rural leisure tourism, cultural experiences and rural e-commerce. It will develop farmers' cooperatives in a well-regulated manner, cultivate leading enterprises in agricultural industrialization, improve the mechanisms for linking enterprises with farmers, link support policies for new types of agricultural business entities to increases in farmers' incomes, and promote steady growth in farmers' incomes.

Section 3 Strengthening and Improving Rural Governance

China will further promote rural revitalization in all respects through Party building, improve the three-tier governance system at the county, township and village levels, select the best and strongest members for village Party branch committees and villagers' committees, especially their leaders, and improve the mechanisms for selecting, dispatching and managing first Party secretaries and work teams stationed in villages. It will promote the standardized development of villagers' self-governance organizations, improve the systems for making village affairs public and for democratic deliberation, and support farmers in participating in village-level deliberation and consultation through multiple channels. It will strengthen the development of spiritual civilization in rural areas in the new era, promote the flourishing of rural culture, and implement the project for fostering civilized rural customs. It will continue to address the problem of excessive bride prices in rural areas. It will protect and pass on rural cultural heritage, strengthen the protection of vernacular architecture and traditional villages, and carry forward the agricultural civilization.

Box 12 Modernization of Agriculture and Rural Areas

01 High-standard Farmland Construction

Give priority to turning permanent basic farmland in the black soil region of northeast China, in plain areas, in areas with irrigation conditions, and in areas with high grain output and great potential for increasing output into high-standard farmland, and turn all eligible permanent basic farmland in the 720 key counties for grain production capacity improvement into high-standard farmland.

02 Development of the Modern Seed Industry

Build and improve the national system for the protection and utilization of crop, livestock and poultry, aquatic, forest and grass, and microbial germplasm resources;

optimize the variety testing and evaluation system; build seed industry innovation bases and seed breeding and production bases; strengthen the cultivation of breakthrough major varieties; and push the self-sufficiency rate of core agricultural seed sources to 85%.

03 Prevention and Control of Animal and Plant Epidemics and Diseases

Improve the monitoring and early warning system for crop pests and diseases and animal epidemics, enhance full-chain management capabilities for the prevention and control of animal and plant diseases, emergency response, quarantine and harmless treatment, and strengthen technical support such as the monitoring and evaluation of pesticides and veterinary drugs.

04 Treatment of Agricultural Non-point Source Pollution

Focusing on the Yangtze River, the Yellow River and other river basins, implement comprehensive treatment of agricultural non-point source pollution, and make coordinated progress in the scientific application of chemical fertilizers and pesticides and the resource utilization of agricultural waste such as livestock and poultry manure.

05 Filling Weak Links in Modern Living Conditions in Rural Areas

Support eligible villages in filling weak links such as intra-village roads, water supply and drainage, sanitary toilet renovation, domestic waste and sewage treatment, and elderly care service facilities in light of local conditions.

CHAPTER 27

Improving the Effectiveness of Policies for Strengthening Agriculture, Benefiting Farmers and Enriching Rural Residents

China will improve the institutional mechanisms and policy system for prioritizing agricultural and rural development, promote the two-way flow of production factors between urban and rural areas, and enhance the vitality of agricultural and rural development.

Section 1 Strengthening Investment Guarantees for Agriculture and Rural Areas

China will improve a diversified investment pattern in which fiscal spending gives priority, finance provides focused support, and society actively participates, ensuring that investment in rural revitalization continues to increase. It will give priority to ensuring general public budget investment in agriculture and rural areas and improve the effectiveness of fiscal policies supporting agriculture and the efficiency of fiscal funds. It will improve the mechanism for ensuring the incomes of grain farmers, strengthen and coordinate policy support in the form of prices, subsidies and insurance, and protect and stimulate farmers' enthusiasm for farming and growing grain. It will increase compensation to major grain-producing areas, implement inter-provincial horizontal benefit compensation between production and marketing areas, and improve the reward and subsidy system for major grain-producing counties. It will improve the financial service system suited to the characteristics of agriculture and rural areas, develop multi-tiered agricultural insurance, and support the development of insurance for agricultural products with distinctive features.

Section 2 Deepening Agricultural and Rural Reform

China will consolidate and improve the basic rural operating system, stabilize land contracting relations, steadily advance pilot programs for extending the second round of land contracts by another 30 years upon expiration, and improve the pricing mechanism and the management and service systems for the transfer of contracted land management rights. It will develop appropriately scaled agricultural operations, improve the development quality of new types of agricultural business entities, improve the convenient and efficient agricultural social service system, and promote the organic integration of small farmers into modern agricultural development. It will deepen comprehensive reform of supply and marketing cooperatives. It will use rural collective commercial construction land economically and intensively, orderly advance reform to allow such land to enter the market, and improve the mechanism for distributing land value-added returns. It will move faster to complete the confirmation, registration and certification of rural homestead rights together with the corresponding housing, strengthen the stan-

dardized management of rural homesteads, and lawfully revitalize and make good use of idle land and houses. It will deepen reform of the rural collective property rights system and support the development of a new type of rural collective economy. It will strengthen the standardized development of rural property rights trading markets, and encourage all types of talent to provide services, start businesses and seek employment in rural areas.

Section 3 Improving the Regular Assistance Mechanism

China will establish, in a coordinated way, a regular mechanism for preventing a return to poverty and new poverty, persist in targeted assistance, improve basic safety-net guarantees, strengthen development-oriented assistance through industry, employment and other means, enhance self-sustaining momentum, provide assistance to underdeveloped areas by category and tier, and ensure that no large-scale return to poverty or new poverty occurs. It will optimize the scope of the existing key counties for national rural revitalization assistance and improve support policies and incentive and restraint mechanisms. It will optimize and improve mechanisms such as East-West cooperation and paired cooperation, continue the designated assistance provided by central government departments and institutions, and further carry out “group-based” assistance by officials and professionals. It will focus on large and extra-large resettlement areas and strengthen follow-up support for people relocated from inhospitable areas. It will advance market-oriented consumption assistance, strengthen the standardized management of the assets of assistance projects, and step up efforts to expand the scope of work-relief programs. It will advance disaster-avoidance relocation in a coordinated manner.

PART 9

Improving the Regional Economic Layout and Promoting Coordinated Regional Development

China will leverage the combined effects of the coordinated regional development strategy, major regional strategies, the functional zoning strategy and the new urbanization strategy, advance in a coordinated way the deeper implementation of strategies within regions and the interconnected development of different regions, improve the layout of major productive forces, give play to the role of key regions as growth poles, and build a regional economic layout and territorial space system featuring complementary strengths and high-quality development.

CHAPTER 28

Enhancing the Coordination of Regional Development

China will implement regional development strategies consistently and without letup, take differentiated and categorized measures in light of local conditions and changing circumstances, encourage all regions to leverage their comparative advantages and fully tap their strengths, promote coordinated development among the eastern, central and western regions and between the north and the south, and promote relative balance through development.

Section 1 Raising the Level of Coordinated Development Among the Eastern, Central and Western Regions and the Northeast

Focusing on major protection, major opening up and high-quality development, China will make solid progress in advancing large-scale development of the western region to

form a new pattern; based on functional positioning, resource endowment and industrial foundations, it will strengthen and expand industries with distinctive competitive advantages, implement a number of major ecological barrier construction projects, and promote opening up both internally and externally through the development of opening up corridors, hub nodes and platform carriers. Based on safeguarding national defense, food, ecological, energy and industrial security, it will push for new breakthroughs in the comprehensive revitalization of the northeast; improve energy corridors and transport networks; continue to consolidate and enhance comprehensive grain production capacity; turn resource advantages in science and education, agriculture and ecology into development outcomes; and accelerate opening up to the north. It will open new prospects for the accelerated rise of the central region, strengthen the capacity to guarantee food and energy and raw materials, improve and strengthen modern equipment manufacturing and high-technology industries, build a comprehensive transport hub system, and advance high-level opening up in inland areas. It will encourage the eastern region to move faster in modernization, strengthen original and disruptive scientific and technological innovation, and lead the building of advanced manufacturing clusters and modern services hubs with international competitiveness.

Section 2 Consolidating and Enhancing the Role of the Beijing-Tianjin-Hebei Region, the Yangtze River Delta and the Guangdong-Hong Kong-Macao Greater Bay Area as Sources of Growth

China will further advance the coordinated development of the Beijing-Tianjin-Hebei region and form a closer pattern of all-round coordinated development. It will actively, prudently and orderly relieve Beijing of functions non-essential to its role as the capital, continue to ensure the implementation of landmark relocation projects and policies, optimize and enhance the capital's functions, and build a modern capital metropolitan area. It will advance the building of Xiong'an New Area into a modern city to high standards and with high quality and improve its management system. It will improve the comprehensive service level of Beijing's municipal administrative center and enhance the comprehensive carrying capacity of the Tianjin Binhai New Area. It will further advance the integrated development of the Yangtze River Delta and improve the institutional mechanisms for integrated development in innovation and industrial chains, infrastructure, ecological and environmental protection and other areas. It will accelerate the building of Shanghai's "five centers," build the Yangtze River Delta Eco-Green Integrated Development Demonstration Zone to high standards, raise the level of radiation from the Hongqiao International Open Hub, support the integration of Shanghai and Suzhou in key areas, and deepen city-pairing cooperation between Shanghai, Jiangsu and Zhejiang and northern Anhui. It will deepen the development of the Guangdong-Hong Kong-Macao Greater Bay Area, strengthen the alignment of rules and mechanisms in scientific and technological innovation, economic development, public services and other areas, strengthen the rule of law safeguards, give full play to the pioneering role of major cooperation platforms, and move faster to build a world-class bay area.

Section 3 Advancing the Development of the Yangtze River Economic Belt and the Ecological Protection and High-Quality Development of the Yellow River Basin

China will continue to prioritize ecological conservation and refrain from large-scale development, uphold ecological conservation and green development, and continue to promote high-quality development of the Yangtze River Economic Belt. It will strengthen pollution control in key areas and the protection and governance of important lakes, firmly advance the ten-year fishing ban in the Yangtze River, orderly raise the level of collection and treatment of domestic sewage in cities along the river, and work to keep the water quality of the Yangtze's main stream stable at Grade II and bring the water quality of major tributaries basically up to Grade II. It will keep the Yangtze River golden waterway open and unobstructed, strengthen the high-standard protection and rational, efficient use of shoreline resources, promote the green transformation and upgrading of industries along the river, and promote coordinated and interconnected development of the upper, middle and lower reaches. It will comprehensively promote the ecological protection and high-quality development of the Yellow River Basin, continue to improve the pattern of major protection and major coordination, systematically advance water conservation in the upper reaches, soil and water conservation in the middle reaches, and wetland protection and ecological governance in the lower reaches, intensify comprehensive treatment of important tributaries such as the Huangshui and Weihe rivers, and go all out in the tough battle for deep water conservation and water use control. It will further advance the building of pilot zones for the ecological protection and high-quality development of the Yellow River Basin.

Section 4 Supporting the Revitalization and Development of Areas of Special Types

China will accelerate the revitalization and development of old revolutionary base areas, pass on the red heritage, develop industries with distinctive features, support these areas in leveraging comparative advantages to foster self-sustaining momentum, and deepen paired cooperation between key cities in old revolutionary base areas. It will provide targeted support to border areas by category, coordinate efforts to guard and consolidate the border, invigorate border areas and enrich their people, strengthen border defense, and promote opening up along the border; promote the innovative development of border trade; increase investment in education, healthcare and other fields in border areas; implement stronger border-protection subsidy policies; make solid progress in building key towns and villages along the border; support the development of port cities; and promote high-quality development in border areas. It will support areas with ecological degradation in carrying out ecological restoration and green development. It will advance the transformation and development of old industrial bases and resource-based areas, support resource-depleted cities in developing replacement industries, and promote the comprehensive treatment and integrated use of coal mining subsidence areas and independent industrial and mining areas.

CHAPTER 29

Promoting Interconnected Regional Development

With major cross-regional and cross-basin corridors as the foundation, the interconnected development of city clusters as the vehicle, and institutional coordination as the guarantee, China will promote mutual integration, mutual reinforcement and mutual benefit among regions and expand the space for domestic circulation.

Section 1 Improving the Layout for Interconnected Regional Development

China will strengthen the connectivity of regional infrastructure, advance the building of major cross-regional and cross-basin corridors such as the Yangtze River comprehensive transport corridor and the border and coastal corridors, and give play to the supporting role of major cross-regional projects such as the west-to-east power transmission project and the project to channel computing resources from the east to the west. It will strengthen the integration of city clusters and the coordination and interconnected development of key city clusters, and promote efficient collaboration in regional innovation and industrial chains. It will support the Beijing-Tianjin-Hebei region, the Yangtze River Delta and the Guangdong-Hong Kong-Macao Greater Bay Area in building world-class city clusters. It will raise the development level of the Chengdu-Chongqing economic zone and build it into an important growth pole for high-quality development. It will promote faster development of the city cluster in the middle reaches of the Yangtze River and similar city clusters. It will cultivate and develop a number of regional central cities, support cooperation and development in areas adjacent to provincial borders, and better leverage the supporting and driving role of regions that connect different areas. It will support major economically strong provinces in shouldering greater responsibilities, strengthen reform efforts to tackle tough problems, policy empowerment and the provision of production factors, and encourage them to take the lead and set an example in advancing Chinese modernization.

Section 2 Improving Cross-Regional Cooperation Mechanisms

China will deepen cooperation across administrative regions and improve mechanisms for inter-regional planning coordination, industrial collaboration and benefit sharing. It will strengthen the coordinated implementation of regional development strategies and the alignment of plans, and jointly advance the building of cross-regional platforms and major projects. It will improve the mechanisms and platform systems for industrial transfer collaboration, explore benefit-sharing mechanisms between industrial transferring and receiving areas in terms of tax revenue, land use and carbon emission allowances, and promote the orderly domestic transfer of key industries. It will support the cross-provincial coordination of construction land quotas within city clusters and metropolitan areas in accordance with plans. It will explore coordinated regional leg-

islation. It will support benefit compensation between the upper and lower reaches of river basins and between resource-exporting and resource-importing areas, and expand models such as river basin economies in light of local conditions. It will move faster to promote high-quality development of areas with large ethnic minority populations, deepen interactions, exchanges and integration among all ethnic groups, improve the working mechanisms for paired assistance to Xinjiang and Tibet, and increase preferential support for southern Xinjiang.

CHAPTER 30

Improving the Territorial Space Development Pattern

China will follow the principle of using water where water is suitable, mountains where mountains are suitable, growing grain where grain is suitable, farming where farming is suitable, developing industry where industry is suitable and developing commerce where commerce is suitable; improve the institutional system of functional zoning; make policies more targeted and precise; and foster a spatial development pattern in which functional zoning constraints are effective and territorial development is orderly.

Section 1 Strengthening the Implementation of the Functional Zoning Strategy

China will keep the overall pattern of urbanized areas, major agricultural production areas and key ecological function areas stable, appropriately optimize the main functions of certain areas, and promote the enhancement of the capacity of urbanized areas to accommodate economic activity and population, the improvement of comprehensive agricultural production capacity in major agricultural production areas, and the improvement of the quality of natural ecosystems in key ecological function areas. It will refine and clarify special functional areas and, on the basis of main functions, add functions such as safeguarding national security, ensuring the supply of energy and resources, protecting and passing on culture, and strengthening the protection and utilization of marine resources in light of local conditions. It will improve differentiated support policies and assessment and evaluation mechanisms for different main functional areas and rationally allocate quotas for newly added construction land, water resources and other factors.

Section 2 Improving Territorial Space Control

China will improve the territorial space planning system; dynamically improve territorial space plans in accordance with national development plans and in light of the assessment results of territorial space planning; and give play to their foundational role in the development and protection of territorial space. It will implement and optimize control lines such as those for arable land and permanent basic farmland, ecological conservation red lines, and urban development boundaries as well as various types of

management and control boundaries, and rationally optimize control objectives in support of the implementation of major national strategies. It will improve the quality of permanent basic farmland, orderly phase out unstable and disaster-damaged farmland and promptly replenish it, study and improve differentiated control of human activities within ecological conservation red lines and differentiated policies for the exploration and extraction of strategic minerals, and optimize urban development boundaries in light of population flows and industrial development trends. It will make coordinated use of nearshore and deep and distant sea space.

Section 3 Strengthening Coordinated Territorial Space Governance

China will establish and improve the systems for territorial space use control and planning permission and implement differentiated and refined use control by zone and category. It will improve the mechanism for guaranteeing land for major national projects and give play to the role of the "one map" in natural resource management and territorial space planning. It will give provincial-level governments greater autonomy in coordinating construction land, explore a model for controlling total construction land within planning periods, allow city and county construction land to be coordinated and the ratio of existing to new construction land to be differentiated, without exceeding the provincial total for construction land, and adopt comprehensive land supply that coordinates existing and incremental land. It will promote the organic integration of land use review and planning permission and coordinated approval for the use of land, sea, forest and grassland.

CHAPTER 31

Deepening People-Centered New Urbanization

China will continue to improve the quality of urbanization, promote the full integration of rural migrants into cities, optimize the structure of city sizes, promote connotative urban development, and promote coordinated development and a compact, intensive layout of large, medium and small cities and small towns.

Section 1 Making Rural Migrants Urban Residents in a Scientific and Orderly Manner

China will take active yet prudent and categorized steps, deepen reform of the household registration system, and ensure the provision of basic public services at the place of permanent residence in a coordinated way. It will improve the points-based household registration policy for megacities and super-large cities, establish public household registration at the sub-district or community level across the board, and broaden channels for rural migrants with stable employment and residence to obtain urban household registration. It will explore establishing a unified national population management system and gradually achieve household registration at the place of permanent residence. It will steadily increase the proportion of rural migrant workers covered by urban employee social insurance and encourage more cities to include eligible permanent residents without local household registration in the public rental housing guarantee. It will relax, in light of local conditions, the requirements for taking the high school entrance examination in the places where migrants have settled, and enable eligible children accompanying their parents to receive basic education continuously. It will further improve the mechanism that links people with land and funding. It will safeguard the lawful land rights and interests of farmers who have settled in cities, protect in accordance with the law their rights to contract land, to use homesteads and to share in collective returns, and explore establishing a voluntary and paid exit mechanism.

Section 2 Cultivating and Developing Modern Metropolitan Areas

China will improve the institutional mechanisms for the integrated development of metropolitan areas and build convenient and efficient commuting circles, tiered and complementary industrial circles, and convenient and shared living circles. It will advance the modernization of governance in megacities and super-large cities, strengthen and refine their core functions, and extend their radiating and driving effects to the common development of surrounding cities and counties. It will advance unified planning, coordinated project layout and coordinated policy-making within metropolitan areas, strengthen the cross-administrative alignment of spatial layouts and land uses, and explore in places where conditions permit the coordination of public resources and production factor allocation with the metropolitan area as the basic unit. It will improve commuting efficiency in metropolitan areas, move faster to connect intercity road sections

that remain unconnected or are bottlenecks, and promote the universal redemption of science and technology innovation vouchers and the mutual recognition of years of employment and residence. It will cultivate a number of metropolitan areas in the central and western regions and the northeast and enhance the radiating and driving capacity of central cities.

Section 3 Building Modern Cities for the People

China will promote the transformation of the urban development model and build innovative, livable, beautiful, resilient, civilized and smart modern cities for the people. It will implement a special action to stimulate the vitality of industrial innovation and enhance cities' capacity to originate industrial innovation. It will advance high-quality urban renewal, carry out city health checks, move faster to build complete communities, improve the implementation mechanisms for urban renewal, establish planning adjustment mechanisms suited to the conversion and mixed use of building functions, and build a sustainable investment and financing system for urban construction and operation. It will use urban underground space efficiently. It will promote the green and low-carbon transformation of urban development, improve urban public transport services, improve urban parks, greenway networks and walking and cycling systems, and continue to improve the 15-minute fitness circles. It will accelerate the building of urban infrastructure lifeline safety projects, advance the renovation of old pipelines and dilapidated houses, and improve urban drainage and waterlogging prevention capacity. It will strictly limit super-high-rise buildings and improve fire prevention and rescue capabilities for high-rise buildings. It will strengthen the management of urban appearance and architectural design and encourage urban buildings to better reflect Chinese aesthetics and the spirit of the times. It will strengthen the building of mutually embedded communities. It will advance the all-round digital transformation of cities, improve urban management mechanisms and operation and management service platforms, and make urban governance smarter and more refined.

Section 4 Advancing Urbanization with County Seats as Key Carriers by Category

Based on resource endowment, location conditions and development foundations, China will guide the development direction of county seats in counties surrounding large cities, in major agricultural production areas, in key ecological function areas and in land border areas by category, form development paths with distinctive features, and orderly promote the reasonable concentration of population in county seats and central towns. It will strengthen industrial support in county seats in areas with urbanization potential and absorb rural migrants for nearby employment and settlement and for returning to their hometowns to start businesses. It will support county seats in addressing shortcomings in infrastructure and public services, enhance their comprehensive carrying capacity, and strengthen fiscal support at the county level. It will, in due course, adjust and expand the economic and social management authority of county-level cities and super-large towns with large economies and rapid population growth, and prudently optimize the institutions of counties with small populations.

Box 13 Urban Renewal and Metropolitan Area Development

01 Construction and Renovation of Underground Pipelines

Construction and renovation will cover about 200,000 km of urban gas pipelines, about 175,000 km of drainage pipelines, about 175,000 km of water supply pipelines, about 100,000 km of sewage pipelines and about 120,000 km of heating pipelines, with smart upgrading carried out in step. Integrated utility tunnels will be built according to local conditions.

02 Improvement of Livable and Secure Housing

Focusing on Class C and Class D dangerous housing on state-owned land and other such housing, about 500,000 units (rooms) of old and dilapidated urban housing will be renovated. About 115,000 old residential communities will be upgraded. On the basis of a comprehensive survey of needs, government-subsidized housing will be developed through multiple channels in light of local conditions. Urban village redevelopment will be advanced steadily and in an orderly manner.

03 Renovation of Old Neighborhoods and Factory Areas

Old neighborhoods will be guided toward functional transformation, business upgrading and greater vitality; idle and inefficiently used factory areas, plants and facilities will be revitalized and put to use on a market basis; and about 1,500 old neighborhoods and factory areas will be renovated and upgraded.

04 Improvement of Intercity Commuting Efficiency in Metropolitan Areas

Intercity railways such as the Beijing–Binhai New Area and Shenzhen–Daya Bay lines will be completed, and intercity and city (suburban) trains will be operated on existing railways. A number of missing sections of national expressway metropolitan loops and urban ring roads will be built.

CHAPTER 32

Strengthening the Development, Utilization and Protection of the Sea

China will maintain coordinated land and maritime development, improve its capacity to manage and develop the sea, move faster to build itself into a maritime power, and forge a path of pursuing strength through the sea with Chinese characteristics.

Section 1 Promoting High-Quality Development of the Marine Economy

China will strengthen, improve and expand the marine industry, orderly advance the development and utilization of marine energy and resources, develop deep-sea aquaculture and modern pelagic fisheries, consolidate and enhance the advantages of the marine equipment manufacturing industry, expand emerging marine industries such as marine biomedicine and seawater desalination, develop modern shipping services, and build cultural and tourism destinations with maritime features. It will strengthen strategic scientific and technological forces in the marine field, strengthen marine scientific and technological innovation, improve the support and guarantee system for deep-sea and polar expeditions, and develop ocean-going meteorological and navigation services. It will implement deep-sea projects and improve the capacity to enter, survey, develop and secure the deep sea. It will strengthen the overall planning of major bays, raise the development level of the northern, eastern and southern marine economic circles, optimize the layout of marine economic development demonstration zones, build modern marine cities with distinctive features, deepen the integrated development of ports, industries and cities in light of local conditions, and encourage coastal and inland regions to strengthen cooperation in the marine economy. It will improve the institutions and mechanisms for promoting marine economic development, increase policy support in fiscal, tax and financial fields, and improve the statistical monitoring system for the marine economy.

Section 2 Protecting the Marine Ecological Environment

China will strengthen source prevention of marine environmental risks, advance pollution prevention and control, shoreline and beach improvement, and protection and restoration in key sea areas, and bring the proportion of good-quality water in nearshore waters to around 86%. It will strictly control sea reclamation, fully implement protection requirements for natural shorelines, coastal wetlands and uninhabited offshore islands, and keep the retention rate of natural shorelines on the mainland at no less than 35%. It will strengthen the cleanup and resource utilization of marine litter. It will formulate differentiated standards and specifications for sea use and actively advance the layered and three-dimensional use of sea areas. It will improve the management system for island development and protection and advance island development by category and in

an orderly manner. It will carry out a new round of comprehensive marine surveys, improve the marine ecological early-warning and monitoring system, enhance the capacity to prevent and control major marine disaster risks, and guard against seawater intrusion. It will explore marine carbon sink accounting.

Section 3 Safeguarding National Maritime Rights and Interests

China will actively promote the building of a maritime community with a shared future, expand blue partnerships, and promote the building of a fair and reasonable international maritime order. It will take an active part in formulating international maritime governance rules and actively implement the Agreement on Marine Biodiversity of Areas Beyond National Jurisdiction. It will strengthen international cooperation in marine scientific research and surveys, disaster prevention and mitigation, and the blue economy, continue to improve multilateral and bilateral cooperation platforms and mechanisms in the maritime field, and promote the establishment of a specialized international maritime organization in China. It will enhance public awareness of the sea, strengthen situation assessment, risk prevention and legal struggle, improve the institutions and mechanisms for safeguarding maritime rights and interests, and enhance maritime law enforcement and maritime judicial capacity.

PART 10

Inspiring the Cultural Innovation and Creativity of the Whole Nation and Promoting the Flourishing of Socialist Culture

Adhering to the guiding position of Marxism in the ideological field, taking root in the profound and extensive Chinese civilization, and keeping pace with the development of information technology, China will develop a socialist culture with Chinese characteristics for a new era that has strong power to guide thinking, to unite the spirit, to inspire values and to exert international influence, and will make solid progress in building a leading country in culture.

CHAPTER 33

Promoting and Practicing the Core Socialist Values

Cultural development will be guided by the core socialist values; mainstream values, mainstream public opinion and mainstream culture will be developed and strengthened; and the Chinese spirit, Chinese values and Chinese strength will be continuously built up.

Section 1 Regularizing and Institutionalizing Education on Ideals and Convictions

Study of and public education in the Party's innovative theories will be deepened, and unremitting efforts will be made to use Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era to strengthen cohesion of the mind and forge the soul; systematic and scholarly research and interpretation will be strengthened, and popular and accessible publicity and dissemination will be carried out. The Party's leadership over ideological work will be firmly maintained, and the responsibility system for ideological work will be fully implemented. The spiritual lineage of Chinese Communists

will be carried forward, and education on patriotism, collectivism and socialism will be deepened. Ideological and political work will be strengthened and improved; the development of campus culture will be advanced; red resources will be put to good use; and education on ideals and convictions among young people will be strengthened. The systemic transformation of mainstream media will be deepened; integrated management of news communication and online public opinion will be advanced; and the ability to guide mainstream public opinion will be improved. The project to study and develop Marxist theory will be implemented in an innovative way, the project to innovate philosophy and social sciences will be carried out, and the building of China's independent knowledge system for philosophy and social sciences will be accelerated. The development of new types of think tanks with Chinese characteristics will be strengthened.

Section 2 Raising the Level of Social Civilization

Urban and rural efforts to foster cultural-ethical progress will be advanced in a coordinated way; culture will be given full play in nourishing the mind and cultivating character; and the whole nation's spirit of enterprise and vitality will be nurtured. Civic morality will be strengthened in the new era; vigorous efforts will be made to promote social morality, professional ethics, family virtues and individual morality; family education and family traditions will be improved; and ideological and moral education for minors will be strengthened. A culture of honesty and trustworthiness and a culture of integrity and probity will be promoted. Exemplary role models will be given full play in setting examples and guiding others; study and publicity of heroes and role models will be strengthened; and the system of honors and commendations will be improved. Citizens' covenants, village rules and conventions and other such instruments will be brought into play, and efforts to change outdated customs will be advanced. The working mechanisms for cultivating civilization, practicing civilized behavior and creating civilized communities will be improved and innovated.

Section 3 Strengthening Civility in Cyberspace

China's capacity for governance in the cultural field under IT-driven conditions will be enhanced; a positive, healthy, uplifting and wholesome online culture will be cultivated; and a beautiful spiritual home in cyberspace will be built together. The development and management of online content will be strengthened, and more effective online dissemination of the Party's innovative theories and fine traditional Chinese culture will be achieved. The development of an all-media communication system will be strengthened, and working mechanisms and evaluation systems suited to all-media production and dissemination will be established. The framework for comprehensive internet governance will be improved; long-term mechanisms for improving the online ecosystem will be refined; the production of online content and the release and dissemination of information will be regulated; and internet companies will be urged to fulfill their social responsibilities. The development and oversight of radio and television and of online audio-visual services will be advanced in a coordinated way.

CHAPTER 34

Vigorously Developing Cultural Programs

The public cultural service system will be improved; fine traditional Chinese culture will be carried forward and promoted; and the people will enjoy a higher quality of cultural life.

Section 1 Promoting the Flourishing of Cultural Creation and Production

A people-centered orientation will be upheld in cultural creation; quality improvement will be treated as the lifeline of literary and artistic creation; a sound cultural ecosystem will be fostered; and the capacity for original cultural creation will be enhanced. Working mechanisms for serving, guiding and organizing literary and artistic creation and production will be improved; a series of art creation projects for the new era will be implemented; the creation of fine works in the press and publishing, radio, film and television, and literature and art will be promoted; and new forms of mass literature and art adapted to the internet age will flourish. A large, well-structured, highly skilled and innovative cultural workforce will be cultivated. Reform of cultural institutions will be deepened, and mechanisms for the development of performing arts troupes will be improved. Comprehensive governance of the entertainment sector will be deepened.

Section 2 Improving Public Cultural Services

Taking culture to benefit the people, China will carry out an initiative to improve the quality and efficiency of public cultural services and ensure that high-quality cultural resources reach the grassroots directly. Mass cultural activities will be carried out extensively, and the development of amateur cultural teams will be strengthened. New types of public cultural spaces will be developed based on urban reading rooms, community cultural stations, cultural corridors and the like, so as to provide more cultural services close to the people. Various public cultural facilities and resources will be revitalized and put to good use; mechanisms for the participation of non-governmental actors in public cultural services will be improved; and reform to separate ownership from use rights for public cultural facilities will be advanced in an orderly manner. The service efficiency of smart museums, smart libraries and the public cultural cloud platform will be enhanced. Public reading activities will be deepened, and the development of a reading society will be advanced. The building of new types of radio and television networks will be strengthened, capacity for producing and broadcasting ultra-high-definition content will be enhanced, and efforts to address “matryoshka-style” tiered fees and the complicated operation of internet TV will be deepened.

Section 3 Strengthening the Protection and Transmission of Cultural Heritage

Systematic protection and unified oversight of cultural heritage will be promoted; management resources will be integrated; and a cultural heritage protection inspection system will be established. The project for preserving and developing fine traditional Chinese culture will be implemented in depth, and a system of symbols of Chinese civilization will be developed. The projects to trace the origins of Chinese civilization and to explore China through archaeology will be carried out. Greater efforts will be made to protect world cultural heritage, historical sites and ruins, revolutionary relics, museum collections and cultural landscapes, and effective protection and living preservation of historical and cultural cities, blocks, towns and villages will be strengthened. National cultural parks dedicated to the Great Wall, the Grand Canal, the Long March, the Yellow River and the Yangtze River will be well built and well used, and their construction and management systems and mechanisms will be improved. The protection of archival and documentary heritage and the rescue protection of ancient books will be strengthened, and the transmission of Chinese classical documents and records will be enhanced. Protection and preservation of intangible cultural heritage will be improved, and new settings for experiencing and passing on intangible heritage will be cultivated. Work on local chronicles will be strengthened and improved.

CHAPTER 35

Accelerating the Development of Cultural Industries

Cultural management systems and mechanisms for cultural production and operation will be improved; proactive cultural and economic policies will be implemented; cultural tourism will be vigorously developed; and culture will empower economic and social development.

Section 1 Improving the Cultural Industry System and Market System

The strategy of driving development through major cultural industry projects will be implemented, and the supply of high-quality cultural products will be expanded. Traditional cultural business forms will be upgraded; integration of culture and technology will be advanced; digital and intelligent empowerment and IT-driven transformation of cultural development will be promoted; new cultural forms such as digital animation, immersive exhibitions and performances, online streaming, short videos and micro-dramas will be developed; and the sound development of online literature, online games and online audio-visual content will be guided and regulated. The project for integrated publishing development will be implemented in depth, and reform and innovation across the entire industry chain will be deepened. Outstanding cultural enterprises and brands will be cultivated, and cultural industry parks will be encouraged to develop in a well-regulated and innovative way. The development of a cultural market that is unified and open, efficient and well-regulated, and orderly in competition will be accelerated; comprehensive law enforcement reform in the cultural market will be deepened; and reform of the approval system for film and television production, online audio-visual services and other fields will be deepened.

Section 2 Deepening the Integrated Development of Culture and Tourism

Efforts to shape tourism through culture and showcase culture through tourism will be deepened, and progress will be made in building a leading country in tourism. The supply of high-quality tourism products will be enriched; distinctive resources and cultural connotations will be explored in depth; and the integrated development of multiple business forms will be actively promoted. Red tourism, rural tourism, health and wellness tourism, industrial tourism and other forms will be developed in light of local conditions; study tours will be developed in a well-regulated manner; and distinctive

themed tourism routes and outstanding tourism performing arts projects will be cultivated. Public tourism services will be improved, and tourism service quality will be enhanced across the entire chain. Standardized management of cultural and tourism project development will be strengthened to prevent idleness and waste. Comprehensive oversight and safety management of the tourism market will be strengthened, and the tourist consumption experience will be improved. A plan to promote inbound tourism will be implemented, and inbound tourism will be made more convenient and more internationally oriented.

CHAPTER 36

Enhancing the Appeal and Influence of Chinese Civilization

The building of a Chinese discourse and narrative system will be accelerated; the effectiveness of international communication will be enhanced; cultural exchanges and cooperation with other countries will be strengthened; and a credible, appealing and respectable image of China will be presented.

Section 1 Building a More Effective International Communication System

The systems and mechanisms for international communication will be improved; communication platforms and methods will be innovated; overseas communication networks will be expanded; a multi-channel, multi-dimensional framework for external communication will be built; and China's international discourse power will be comprehensively enhanced. Globalized, market-oriented and professional international communication entities will be cultivated; the international communication capacity of mainstream media will be strengthened; an international communication matrix of radio, television and audio-visual media will be built; the international development of social media platforms will be promoted; and Chinese stories and voices will be communicated globally, regionally and to targeted audiences. Cultural enterprises will be encouraged to operate internationally; high-quality online literature, online games, film, television and animation, and fine exhibitions will be promoted overseas; and the development of key international communication bases and national cultural export bases will be strengthened.

Section 2 Deepening Exchanges and Mutual Learning Among Civilizations

International people-to-people and cultural exchanges and cooperation will be carried out extensively, multi-level dialogue among civilizations will be strengthened, and Chinese culture will be brought to the world more effectively. The Global Civilizations Dialogue Conference will be held, and the Liangzhu Forum will continue to be held successfully. Signature events such as the "Understanding China" conference and the "Orchid Awards" will be carried out, and the China Culture and Tourism Year (Festival) and over-

seas Chinese film festivals and exhibitions will be well organized. International development assistance in the field of cultural heritage will be strengthened, and international cooperation on the recovery and return of cultural relics will be deepened. The dissemination and display of Chinese culture and the development of Chinese studies abroad will be supported. Regional and country studies will be strengthened.

Box 14 Prosperity and Development of Socialist Culture

01 Research, Interpretation and Elucidation of the Party's Innovative Theory

Editorial work will continue on the publication of important works such as "Selected Readings from the Works of Xi Jinping" and "Xi Jinping: The Governance of China", and a series of theoretical readers —including the introductions to Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era in various fields, study outlines and study question-and-answer books —will be compiled and revised, with stronger translation, publication and overseas dissemination.

02 Guidance and Support for the Creation of Outstanding Literary and Artistic Works

The "Five One Project" for spiritual civilization development, the National Fine Arts Collection Program and the action plan for the revitalization of drama will be implemented in depth. Projects such as the creation of works on the earth-shaking changes in mountain villages in the new era and the scaling of new heights in new-era literature will be advanced. One hundred classic documentaries of the new era, 100 outstanding animated works and a series of excellent film and television programs and micro short dramas will be produced.

03 Development of Public Cultural Facilities

The new building of the Central Archives, the new building of the National Natural History Museum and the National Documents Repository will be completed, and the National Art Museum will be built. The service level of public libraries, cultural centers and new types of public cultural spaces will be raised, and a program to upgrade small and medium-sized museums will be implemented.

04 Protection, Inheritance and Utilization of Cultural Heritage

The National Cultural Heritage Science and Technology Innovation Center and the National Archaeological Research Center for Xia and Shang Civilizations will be built. Integrated protection of the Hexi Corridor national cultural heritage route and the Shu Roads, the Qin Straight Road and other heritage routes will be strengthened. The key "Chinese Construction" program will be implemented. The protection, collation and publication of the Yongle Encyclopedia, Dunhuang documents and bamboo and wooden slip documents will be advanced in a systematic way. A program for repairing important revolutionary sites and restoring revolutionary cultural relics in museum collections will be carried out. A national database of cultural relic resources will be built. World cultural heritage sites and a number of historical and cultural cities, districts and towns and villages will be protected and upgraded.

05 Deep Integration of Culture and Tourism

High-quality cultural resources will be leveraged and existing facilities revitalized

and put to use; the development of tourism and leisure cities and districts will be strengthened; a number of high-quality tourist attractions and resorts will be cultivated; and a number of premium tourism routes and products will be created.

PART 11

Improving the Population Development Strategy and Promoting High-Quality Population Development

With the focus on addressing population aging and the declining birth rate, the population development strategy will be improved; a population service system covering the entire population and the whole life cycle will be refined; the population structure will be optimized; the quality of the population will be raised; and high-quality population development will underpin Chinese modernization.

CHAPTER 37

Building a Birth-Friendly Society

Birth support policies and incentive measures will be improved, the costs of childbearing, child-rearing and education for families will be effectively reduced, efforts will be made to stabilize the number of new births, and long-term balanced population development will be promoted.

Section 1 Improving Birth Support Policies

A birth-friendly policy orientation will be maintained, and birth support will be integrated into all economic and social development policies. Full play will be given to the role of childcare subsidies and the special additional individual income tax deductions for infant and toddler care and children's education, and a mechanism for dynamically adjusting subsidy standards will be explored. Coverage of the maternity insurance sys-

tem will be expanded; the level of medical expense protection for prenatal checkups will be reasonably raised; hospital delivery within the scope of policy will basically require no personal payment; and appropriate labor analgesia services will be included in the scope of protection. The maternity leave system will be fully implemented, and employers will be encouraged to adopt flexible working arrangements for employees who are parents of children under three. Fertility protection will be strengthened; an initiative to care for early pregnancy and a plan to improve capacity for preventing and treating birth defects will be implemented; and infant mortality and maternal mortality will be reduced to below 3.5 per 1,000 and 12 per 100,000, respectively. The well-regulated and orderly application of assisted reproductive technology will be advanced, and medical expense protection will be strengthened. Ways to provide subsidies for infants and young children to participate in basic medical insurance will be explored.

Section 2 Improving the Childcare Service System

The development of a system of affordable childcare services will be accelerated, and the supply of service resources will be expanded through multiple channels. The supply of publicly run childcare places will be increased; kindergartens will be supported in developing integrated childcare and preschool services and encouraged to enroll children aged 2–3; and non-governmental actors will be supported in providing diversified affordable childcare services through such models as employer-run childcare, community-embedded childcare and home-based childcare points. Pilot demonstrations of childcare service subsidies will be carried out in depth, and the pricing mechanism for affordable childcare services will be improved. An initiative to improve the quality of childcare services will be implemented, and the safety and standardization of childcare services will be enhanced. Legislation on childcare services will be accelerated.

Section 3 Improving Family Development Policies and the Birth-Friendly Environment

The policy system supporting family development will be improved, and marriage and childbearing at the appropriate age, healthy childbearing and child-rearing, and the sharing of child-rearing responsibilities by husband and wife will be encouraged. A new culture of marriage and childbearing will be cultivated, a positive outlook on marriage and childbearing will be advocated, and outdated practices in weddings and funerals will be effectively addressed. Siblings in families with multiple children will be supported in attending the same school, and housing security and home-purchase policies will be tilted toward families with multiple children. Public spaces will be made more child-friendly, and maternal and infant facilities will be provided. The Family Education Promotion Law will be implemented; community parents' schools and similar institutions will play their role; and guidance services for family education will be strengthened. The system of comprehensive assistance and support for families with special difficulties under the family planning policy will be improved. Comprehensive efforts to address the sex ratio at birth will be strengthened. The population monitoring system and the forecasting and early-warning system will be improved.

CHAPTER 38

Running Education That Satisfies the People

Priority will be given to the development of education; the fundamental task of fostering virtue through education will be carried out; comprehensive reform of education will be deepened; mechanisms for allocating educational resources suited to demographic changes will be improved; a high-quality education system will be built; and socialist builders and successors who are well developed morally, intellectually, physically, aesthetically and through labor will be cultivated.

Section 1 Implementing the New-Era Project for Fostering Virtue Through Education

Unremitting efforts will be made to use Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era to forge the soul and educate the people; the development of "great ideological and political courses" will be strengthened; the curriculum and textbook system will be improved; the curriculum plan for ideological and political courses in higher education institutions in the new era will be fully implemented; quality-oriented education will be carried out in depth; and students will be helped to grow up healthily and develop in an all-round way. Forms of practical education will be innovated; dedicated courses on social practice for university students will be developed; a system of study tours on national conditions for primary and secondary school students will be established; and ideological and political classes will be effectively integrated with social practice. A plan to strengthen students' physical fitness will be implemented; aesthetic education immersion initiatives and programs to cultivate good labor habits will be carried out; and mental health education will be made universal. The student financial assistance system covering all stages of education will be improved. An initiative to popularize the standard spoken and written Chinese language and raise its quality will be implemented. The spirit of educators will be carried forward; the professional ethics of teachers will be strengthened; teachers' salaries and benefits will be safeguarded; a project to enhance teacher education capacity will be implemented; and a high-level teaching workforce will be cultivated. Mechanisms for coordinated education by schools, families and society will be improved. Reform of educational evaluation will be deepened, and differentiated management and evaluation mechanisms will be established. Private education will be guided toward well-regulated development.

Section 2 Expanding Quality Basic Education and Raising Its Standards

Dynamic adjustments and reallocation of basic education resources across different stages of schooling will be strengthened, and the supply of educational resources will be expanded in towns and cities experiencing net inflows of school-age population. The provision of high-quality, balanced compulsory education will be advanced; school principals and teachers will be better coordinated, allocated and rotated within their regions;

small-class teaching will be advanced in an orderly manner; and necessary small rural schools will be run well. The provision of high-quality, affordable preschool education will be advanced; the proportion of places in public kindergartens will be increased; and the gross enrollment rate in preschool education will rise to 95%. Resources for regular high schools will be expanded; the plan to revitalize county-level regular high schools will be implemented in depth; and the completion rate of senior secondary education will reach 88%. The scope of free education will be steadily expanded, and extending the number of years of compulsory education will be explored. Reform of the high school entrance examination will be advanced in an orderly manner; the proportion of enrollment quotas for high-quality high schools allocated to individual schools will be increased; and areas where conditions permit will be supported in piloting balanced allocation of enrollment placements. The "double reduction" policy and improvements in the quality of education and teaching will be advanced in a coordinated way. Support mechanisms for special education and specialized education will be improved.

Section 3 Improving the Quality and Expanding the Capacity of Higher Education

In line with their basic positioning as research-oriented, application-oriented or skills-oriented institutions, higher education institutions will be reformed and developed on a categorized basis. Enrollment in high-quality undergraduate programs and in postgraduate education will be expanded in an orderly manner, mainly in science, engineering, agriculture and medical programs; the gross enrollment rate in higher education will reach 65%; and the proportion of undergraduate enrollment and the share of postgraduate students among all higher education students will be steadily increased. Professional degree postgraduate education will be vigorously developed, and the proportion of master's and doctoral students in engineering will be increased. High-quality higher education resources will be expanded through multiple channels; greater efforts will be made to build high-level research universities; and application-oriented undergraduate institutions will be strengthened. Newly added higher education resources will be appropriately tilted toward populous provinces and the central and western regions. Adjustments to the per capita education funding standard for undergraduate students will be studied and made in due course, and basic conditions such as student dormitories will be continuously improved. The opening-up of high-level education will be expanded; high-level foreign science and engineering universities will be encouraged to establish cooperative programs in China; and the brand and capacity building of "Study in China" will be strengthened. The education digitalization strategy will be implemented in depth. Public services for lifelong learning will be improved, and the system of the Open University of China will be improved.

Section 4 Enhancing the Capacity of Vocational Schools

The development of a modern vocational education system will be advanced, and the quality and attractiveness of vocational education will be improved. The layout of vocational education will be optimized to align with regional development and industrial distribution, and the setting of majors will be closely matched to the needs of industrial and innovation chains. Reform of secondary vocational education will be deepened; a small number of excellent secondary vocational schools will be run well; distinctive high-quality higher vocational schools will be built; and the integrated development of secondary and higher vocational education will be supported. A number of high-level vocational schools at the undergraduate level will be built, and the integration of undergraduate vocational education with professional degree education will be promoted. A talent cultivation model integrating industry and education will be adopted; education mechanisms that combine moral cultivation with skills training and integrate learning with work will be improved; and leading enterprises in industries will be encouraged to run or participate in running vocational schools.

Box 15 Building a High-Quality Education System

01 Expansion and Quality Improvement of Basic Education

Effective supply of affordable preschool education resources will be ensured. Standardized development will be achieved in all compulsory education schools. Focusing on areas with large resident populations and areas with large inflows of people, more than 1,000 quality ordinary senior high schools will be built. Secondary schools will be supported in upgrading their laboratory instruments and equipment, and a number of ordinary senior high schools featuring high-level science education will be built.

02 Expansion of High-Quality Higher Education Resources

Support will be given to building several new campuses of "Double First-Class" universities; undergraduate enrollment at "Double First-Class" universities will increase by more than 100,000; about 200 high-level application-oriented undergraduate universities will be built, and a number of high-quality distinctive disciplines and majors will be developed in qualified universities. Higher education research institutes will be established in the central and western regions, the northeast and other areas. The national basic research innovation and upgrading project will be implemented, and a number of national interdisciplinary centers and national top-notch innovative talent training colleges will be built in key fields. Relying on the National Excellent Engineer Colleges, a number of engineer technology centers will be strengthened, and about 150 national platforms for industry-education integration and innovation will be completed.

03 Building a Modern Vocational Education System

About 60 high-level higher vocational schools and about 160 high-level major clusters will be built, and quality secondary vocational schools and majors will be supported in their development. A number of quality technician colleges and 100 qual-

ity majors will be built. Focusing on key industries such as integrated circuits, artificial intelligence and the low-altitude economy as well as modern services, 200 industry-education integration practical training bases will be built, and a number of high-level vocational colleges will be supported in upgrading their advanced practical training equipment.

04 Shoring Up Weak Links in Special Education

Standardized development of special education schools will be advanced; with full reliance on existing resources, counties that have needs will be supported in running special education schools that meet standards; cities with large populations will be supported in building special education schools for children with autism; and the integration of rehabilitation and education will be encouraged. Special education will be included in the compulsory courses for students of teacher-training programs.

CHAPTER 39

Accelerating the Building of a Healthy China

A strategy of giving priority to health in development will be implemented; the policy and institutional systems for health promotion will be improved; the patriotic health campaign will be made more effective; the shift from a treatment-centered approach to a health-centered approach will be promoted; fair, accessible, systematic and continuous health services will be provided to the people; and the people's health will be improved.

Section 1 Improving the Public Health System

Public health capacity will be strengthened; social co-governance, coordination between medical treatment and disease prevention, and integration of the two will be deepened; and systems for infectious disease prevention and control, emergency response, medical treatment, supplies support and oversight will be established and improved. The disease control system will be strengthened; capacity for infectious disease surveillance, early warning and epidemiological investigation will be enhanced; the public health laboratory network will be improved; and a tiered, classified and triaged treatment system will be developed. Prevention and control of major infectious diseases will be strengthened, and mechanisms for joint prevention and control will be improved. The types of vaccines in the national immunization program will be dynamically optimized. The emergency medical rescue and pre-hospital first aid systems will be improved, and blood supply and emergency response capacity will be enhanced. Mental health and psychological services will be strengthened, and early detection and comprehensive intervention for common mental disorders and psychological problems among key groups will be enhanced. Prevention and treatment of occupational diseases will be strengthened. A balanced diet initiative and the national nutrition program will be implemented, and action to promote healthy weight management will be continued.

Section 2 Building a High-Quality and Efficient Medical Service System

The functional positioning and distribution of medical institutions will be optimized, and the hierarchical diagnosis and treatment system will be improved. The expansion and downward transfer of high-quality medical resources and their balanced regional distribution will be promoted; the building of national medical centers will be advanced steadily and in an orderly manner; and national regional medical centers will be improved in quality and efficiency. A project to strengthen the foundations of medical and health services will be implemented; the operation of county, district and grassroots medical institutions will be better supported; full coverage of county-level medical communities will be basically achieved, with closer coordination and synergy; the building of tight urban medical groups will be advanced; the mobile medical service system will be improved; the coverage of and satisfaction with family doctor services will be increased; and the share of diagnoses and treatments handled by grassroots medical and health institutions will be raised, with a reasonable increase in the variety of medicines stocked. Comprehensive prevention and control of chronic diseases will be strengthened; services covering prevention, treatment, rehabilitation and management across the whole chain will be developed; a system for early screening, early diagnosis and early treatment will be improved; and the premature mortality rate from major chronic diseases will be reduced to below 13%. The supply of rehabilitation, nursing and hospice care services will be expanded, and a project to expand and upgrade rehabilitation and nursing services will be implemented. The ranks of general practitioners, licensed physicians and nurses will be strengthened, and standardized residency training will be improved. The digital and intelligent development of health services for all will be advanced, and the mutual recognition and sharing of test and examination results will be promoted.

Section 3 Improving the Mechanism for Coordinated Development and Governance of Medical Services, Medical Insurance and Medicines

Reform of the medical and health system will be deepened to promote unified goals, policy coordination, information connectivity and coordinated oversight. Public hospital reform will be deepened with a focus on public welfare; a mechanism for dynamically adjusting the staffing of public hospitals will be established; a charging mechanism centered on medical services will be improved; the remuneration system will be refined; the practice of medical institutions and medical personnel will be regulated; and legal safeguards in the medical and health field will be strengthened. The development of private hospitals will be guided toward well-regulated operation. Reform of medical insurance payment methods will be deepened; the use of surplus funds will be optimized; differentiated payment policies for medical institutions at different levels will be improved; the personal cost burden of insured persons will be reduced; and the efficiency of medical insurance fund use will be increased. The medicine pricing mechanism will be improved, and the policy for centralized procurement of medicines and medical consumables will be refined. Review and approval of innovative drugs and drugs in urgent clinical need will be optimized; mechanisms for medical insurance to support the high-quality development of innovative drugs and medical devices will be improved; the catalog of innovative drugs will be refined; and commercial insurance will be encouraged to expand

coverage for innovative drugs.

Section 4 Promoting the Inheritance and Innovation of Traditional Chinese Medicine

The revitalization and development of traditional Chinese medicine (TCM) will be promoted, and the integration of TCM and Western medicine will be advanced. The TCM service system will be improved; primary-level TCM service capacity will be enhanced; specialized TCM departments with distinctive strengths will be developed; and coordinated TCM and Western medicine services will be developed. Scientific and technological innovation in TCM will be promoted, and a project to train TCM specialists will be implemented. The protection and utilization of TCM resources and the development of production bases for genuine regional medicinal materials will be strengthened; the development and transformation of TCM preparations and classic formulas will be enhanced; the quality of TCM will be improved; and the TCM industry will be made larger and stronger. Reform of medical insurance payment methods suited to the characteristics of TCM will be advanced. TCM culture will be promoted, and TCM will be taken global.

Section 5 Accelerating the Building of a Leading Country in Sports

Mass sports will be actively developed; nationwide fitness activities will be carried out extensively; fitness among young people will be promoted; and the proportion of people who regularly participate in physical exercise will reach around 40%. The public service system for nationwide fitness will be improved, and the layout and construction of sports facilities near people's homes will be strengthened. The management system and operating mechanisms of competitive sports will be reformed and improved; the training of reserve talent and R&D on sports science and technology equipment will be strengthened; and the overall strength of competitive sports will be enhanced. High-quality preparations will be made for major international competitions, and the National Games will be well organized. The revitalization and development of the "three major ball games" will be advanced, and reform in football will be deepened. The supply of high-quality sports products and services will be enriched; the development of the sports event economy will be encouraged; waters, airspace and mountains will be opened up for outdoor sports in a safe and orderly manner; the achievements of "engaging 300 million people in winter sports" will be consolidated and expanded; and the high-quality development of the sports industry will be promoted.

Box 16 Building a Healthy China

01 Building Public Health Capacity

The overall capacity of the Chinese Center for Disease Control and Prevention will be enhanced. The building of national emergency medical rescue bases will be strengthened. Ten national regional blood safety centers will be established.

02 Improving Quality Medical Services

Focusing on major diseases, high-level hospitals will be strengthened, and 60 quality

provincial hospitals will be supported in raising their clinical diagnosis and treatment levels. Hospitals with outdated ward facilities and equipment will be encouraged to renovate their wards and upgrade their medical equipment.

03 Strengthening the Foundations of Medical and Health Services

Support will be given to building 1,000 tightly integrated county-level medical communities; county-level hospitals and key central township health centers will be upgraded; and resource sharing in county areas will be strengthened in medical imaging, electrocardiogram diagnosis, medical laboratory testing, disinfection supply, pharmaceutical supply and pharmaceutical services.

04 Building National Medical Centers

Focusing on high-level key specialty areas, support will be given to building a number of national medical centers in order to enhance capacity in diagnosing and treating difficult and critical diseases, leading clinical technology, translating medical research, and training leading talent.

05 Shoring Up Weak Links in Medical Services for Key Groups

Qualified secondary hospitals will be supported in providing rehabilitation and nursing services. Support will be given to building provincial-level and key prefecture-level mental health service institutions. The pediatric service capacity of medical and health institutions will be strengthened.

06 Inheritance and Innovation of Traditional Chinese Medicine

Support will be given to building the National Traditional Chinese Medicine Inheritance and Innovation Center, flagship hospitals of integrated Chinese and Western medicine, and specialty centers for areas where traditional Chinese medicine has strengths, so as to better leverage the unique advantages and role of traditional Chinese medicine.

07 Development of Sports Venues and Facilities

A plan to expand public sports space will be implemented; localities with suitable conditions will be encouraged to tap “golden corners and silver edges”, and more convenient and accessible sports facilities will be built. With football and other sports as priorities, support will be given to building training facilities for youth competitive sports. The building of 100 high-quality outdoor sports destinations for ice and snow, mountain and other sports will be promoted.

CHAPTER 40

Actively Responding to Population Aging

The national strategy for actively responding to population aging will be implemented in depth; policy mechanisms for the coordinated development of elderly care programs and industries will be improved; and older people will be enabled to live in security, remain active and enjoy their later years.

Section 1 Improving the Urban and Rural Elderly Care Service Network

The layout of elderly care facilities will be planned in a coordinated manner; the supply of basic elderly care services will be optimized; and elderly care services will be expanded, improved in quality and made more efficient. Reform and development of elderly care services will be deepened, and the categorized reform of elderly care institutions will be advanced in an orderly manner. Community-embedded elderly care services will be developed, and professional, branded and chain-operated community elderly care institutions will be cultivated. Home-based elderly care beds will be developed, and age-friendly modifications of homes will be advanced. Mutual-aid elderly care services will be developed. The care system for older people who are disabled or living with dementia will be improved; the supply of nursing-type beds in elderly care institutions will be increased; and the integration of medical care and elderly care will be actively advanced. Long-term care insurance will be introduced, and a unified assessment system for the capabilities of older people will be improved. The professionalization of the elderly care workforce will be advanced, and the quality and effectiveness of comprehensive oversight of elderly care services will be enhanced. Care and assistance for older people living alone at advanced ages and for empty-nest older people will be strengthened.

Section 2 Creating a Rich and Colorful Life in Old Age

A positive outlook on aging and healthy aging will be integrated into the whole process of economic and social development; education on population aging as a national condition will be carried out in depth; and a social environment of filial piety and respect for older people will be fostered. The silver economy will be vigorously developed; the supply of age-friendly products and services for older people will be enriched; leading enterprises and well-known brands in the silver economy will be cultivated; a certification system for silver economy products will be explored and established; and statistics on the silver economy will be improved. The human resources of older people will be actively developed; the progressive raising of the statutory retirement age will be implemented prudently; age restrictions in employment, social security and other areas will be optimized; diverse jobs suitable for older people will be expanded; and the “Silver Age Action” will be carried out in depth. The supply of educational resources for older

people will be expanded, and universities for older people will be developed to meet their intellectual and cultural needs. Preferential treatment and protection of the rights and interests of older people will be strengthened. Public facilities will be made more age-friendly; the "smart technology for older people" initiative will be continued; high-frequency services for older people will be made easier to access and service settings simpler and more user-friendly; and integrated services for older people will be developed.

Box 17 Optimizing and Improving Services for "the Elderly and Children"

01 Improving the Quality and Efficiency of Elderly Care Institutions

For public elderly care institutions that were built long ago and have outdated facilities, with emphasis on converting beds into nursing-care beds and renewing facilities and equipment, and by encouraging such models as public construction with private operation, 2,000 public elderly care institutions will be brought up to Class II standards or above and the safety level of their facilities will be raised. Smart service systems, smart assistive devices, smart fire protection and security systems, and the like will be promoted and applied in qualified comprehensive elderly care service institutions.

02 Improving Community-Based Elderly Care Services

Community-based elderly care service facilities will be strengthened where they fall short, their caregiving capacity and elderly care service functions will be enhanced, and the coverage rate of community-based elderly care service institutions and facilities will reach 70 percent.

03 Enhancing Integrated Medical and Elderly Care Capacity

Qualified comprehensive hospitals will be supported in developing integrated medical and elderly care services. Township health centers that have needs will be supported in improving their facilities, and the supply of caregiving services for disabled and cognitively impaired elderly people will be expanded.

04 Expanding and Improving Affordable Childcare Services

The development of affordable childcare services will be advanced by city as a unit through coordinated planning; the layout of comprehensive childcare service centers will be improved and community affordable childcare facilities and integrated childcare and preschool institutions will be renovated and expanded, so that comprehensive childcare service centers will cover all prefecture-level cities.

05 Improving Maternity Medical Services

Ten national regional reproductive health centers will be upgraded and renovated, and every province will have at least one high-level maternal and child health institution. Midwifery institutions will be encouraged to raise their service levels.

PART 12

Strengthening Efforts to Ensure and Improve People's Wellbeing and Making Solid Progress Toward Common Prosperity for All

Efforts will be made to ensure and improve people's wellbeing through high-quality development and to do everything within the country's capacity; the basic public service system will be improved; more equitable, inclusive, targeted and effective social policies will be implemented; inclusive, basic and safety-net initiatives to improve people's wellbeing will be strengthened; the pressing difficulties and problems of greatest concern to the people will be resolved; channels for social mobility will be kept open; and people's quality of life will be improved.

CHAPTER 41

Promoting High-Quality and Full Employment

The employment-first strategy will be implemented in depth; the expansion of employment capacity will be combined with the improvement of employment quality; mechanisms for promoting employment will be improved; and an employment-friendly development model will be established.

Section 1 Strengthening Employment-First Policies

High-quality and full employment will be made a priority goal of economic and social development, and mechanisms for assessing the employment impact of major policies, major projects and the layout of major productive forces will be improved. Coordination

between industry and employment will be strengthened; an initiative to stabilize jobs, expand employment and improve quality will be implemented; policy support will be continuously strengthened for enterprises in sectors that absorb a large amount of employment, such as foreign trade, construction, accommodation and catering; the potential of the service sector and emerging fields to absorb employment will be fully tapped; and the sound development of flexible employment and new forms of employment will be promoted. Employment for key groups such as college graduates, rural migrant workers and veterans will be stabilized and expanded. Employment assistance for groups in difficulty will be strengthened; unemployed people will be helped to find new jobs; and at least one member of every zero-employment family will be ensured employment. Support for starting businesses will be increased, and the role of entrepreneurship in creating jobs will be enhanced. The impact on employment of changes in the external environment and the development of new technologies such as artificial intelligence will be addressed comprehensively. An evaluation system for high-quality and full employment will be established.

Section 2 Carrying Out Vocational Skills Training on a Large Scale

Mechanisms for matching the supply of and demand for human resources will be improved; the system of lifelong vocational skills training will be improved; and efforts will be focused on resolving structural employment problems. With market-based training playing the lead role and independent training by industries and enterprises as the mainstay, the strengths of schools and social training institutions will be fully leveraged to expand the supply of high-quality training. Employment subsidy funds, unemployment insurance funds and other resources will be coordinated and used to support vocational skills training, and enterprises will be guided to fully withdraw and use employee education funds in accordance with regulations. Training subsidies will be delivered directly to enterprises and trainees, and a system under which unemployed people in key groups can apply for training subsidies will be introduced. The classification of occupations, occupational standards and the skilled talent evaluation system will be improved; the "new eight-level worker" vocational skill level system will be implemented in depth; and a national qualifications framework will be developed. China will host a successful World Skills Competition.

Section 3 Strengthening Employment Services and the Protection of Workers' Rights and Interests

The employment support and public service systems will be improved, and a fair and orderly employment environment will be created. The labor standards system and the mechanisms for consultation and coordination of labor relations will be improved; the system for protecting the rights and interests of people in flexible employment and new forms of employment will be improved; platform enterprises will be urged to formulate fair labor rules and employ workers in compliance with laws and regulations; and harmonious labor relations will be fostered. The digital and intelligent transformation of personnel file services for workers on the move will be accelerated. Guidance on career

choices and hiring practices will be strengthened. The legal system for labor and employment will be improved; the effectiveness of mediation and arbitration of labor relations disputes will be enhanced; the labor security supervision system will be improved; enterprises will be urged to implement working-hour rules in accordance with the law; and employment discrimination, wage arrears, non-payment of social insurance contributions, illegal layoffs and other such problems will be effectively addressed. The system for statistics, monitoring and risk early warning on employment and unemployment will be improved, and mechanisms for preventing and defusing the risk of large-scale unemployment will be improved.

Box 18 Employment Promotion and Service Improvement

01 Employment Support for Key Groups

An employment support plan for college graduates and other young people will be implemented, and a full-chain support system covering policy incentives, job referrals, career guidance and employment internships will be improved. Coordination between labor-importing and labor-exporting areas will be strengthened, and distinctive labor service brands will be created. Public welfare jobs will be used in a coordinated way, and employment assistance will be provided as a fallback for groups in difficulty.

02 The "Skills Light the Way to the Future" Training Initiative

Focusing on fields such as advanced manufacturing, the digital economy and everyday services, key groups will be supported in participating in employment skills training. National training bases for highly skilled talent and skills master studios will be built, and a number of public practical training bases will be supported. Enterprises will be encouraged to carry out training under the new apprenticeship system and technician training.

03 Improving Public Employment Services

"Doorstep" employment services will be strengthened to make public employment services more accessible. The national employment information resource database and the smart employment service platform will be improved, employment information services will be strengthened, a precise match between labor supply and demand will be promoted, and big-data monitoring of employment will be reinforced. A mechanism for investigating and responding to the impact of artificial intelligence on employment will be established, and job stabilization support, job transfer training and employment support will be strengthened.

04 Enhancing the Employment-Generating Effect of Entrepreneurship

Support for entrepreneurial training, entrepreneurial services, business incubation and entrepreneurial activities will be strengthened in an integrated way; "scientific and technological achievements plus entrepreneurship", "industrial development plus entrepreneurship", "vocational skills plus entrepreneurship" and "people's livelihood needs plus entrepreneurship" will be advanced by category; and high-quality business incubation platforms will be built.

CHAPTER 42

Improving the Income Distribution System

The principle of distribution according to work will remain predominant while multiple forms of distribution coexist; the institutional system for coordinated and complementary primary distribution, redistribution and tertiary distribution will be improved; the share of residents' income in national income distribution will be increased; and the share of labor remuneration in primary distribution will be raised.

Section 1 Optimizing the Pattern of Primary Distribution

The primary distribution mechanism under which all factors are evaluated by the market for their contributions and remunerated according to those contributions will be improved, so that those who work more earn more, those with higher skills earn more and those who innovate earn more. Mechanisms for determining wages, ensuring reasonable wage growth and guaranteeing wage payment will be improved; the system of collective wage bargaining will be implemented; the minimum wage adjustment mechanism will be improved; and macro guidance for enterprise wage distribution will be strengthened. Reform of the wage determination mechanism of state-owned enterprises will be deepened; the wage, allowance and subsidy systems of government agencies and public institutions will be improved; and wage distribution will be tilted more toward the grassroots and areas with difficult conditions. The system of enterprise compensation surveys and information disclosure will be improved. Property income of urban and rural residents will be increased through multiple channels; the dividend incentive and restraint mechanisms of listed companies will be improved; financial products and services that meet residents' wealth management needs will be enriched; and the share of farmers in the value-added benefits of land will be increased. Distribution policies oriented toward increasing the value of knowledge will be strengthened; more qualified state-owned enterprises will be allowed to carry out various forms of medium- and long-term incentives for researchers oriented toward innovation and creativity; and the building of a skills-oriented remuneration system will be accelerated.

Section 2 Strengthening the Regulation of Income Distribution

Redistribution through taxation, social security and transfer payments will be strengthened to improve the pattern of income distribution. Tax regulation will be made stronger and more targeted; the system of tax and fee services and oversight for natural persons will be improved; and a unified tax on labor income will be applied. The role of special additional deductions will be fully leveraged, and individual income tax deductions will be increased. Mechanisms for tax regulation of capital gains will be explored and improved, and tax oversight of high-income earners will be strengthened. The mutual assistance and risk-pooling functions of social security will be strengthened, and gaps

in financing and benefit protection between systems and between regions will be gradually narrowed. The functional positioning of transfer payments will be optimized, and the role of general transfer payments in narrowing regional fiscal gaps will be strengthened. The disaster relief and assistance system will be improved. The role of tertiary distribution will be better leveraged; the development of public welfare and charity will be promoted and regulated; and effective forms of charity will be explored.

Section 3 Steadily Expanding the Middle-Income Group

A plan to increase the incomes of urban and rural residents will be formulated and implemented; the incomes of low-income groups will be effectively increased; the proportion of the middle-income group will be raised; and the formation of an olive-shaped distribution pattern will be promoted. Income-increasing policies will be implemented in a targeted way for key groups: the job-matching rate of college graduates will be improved; technical workers will be helped to achieve both higher pay and higher skills; the system for guaranteeing wage payment to rural migrant workers will be fully implemented; multiple measures will be taken to help small and medium-sized business owners and self-employed individuals operate steadily; and high-quality farmers and rural leaders in getting rich will be actively cultivated to enhance their ability to increase incomes and prosper. The order of income distribution and the mechanism for wealth accumulation will be regulated; hardworking, innovative and lawful ways of getting rich will be supported; those who become well-off first will be encouraged to help others and promote common prosperity; excessively high incomes will be reasonably regulated; and illegal incomes will be banned.

CHAPTER 43

Improving the Social Security System

With the focus on strengthening protection for key groups and enhancing the sustainability of the system, a multi-tiered social security system that covers all citizens, coordinates urban and rural areas, is fair and unified, safe and well-regulated, and sustainable will be improved.

Section 1 Steadily Raising the Level of Social Security

An initiative for high-quality social insurance participation will be implemented, and social insurance coverage will be continuously expanded. The development of a multi-tiered, multi-pillar old-age insurance system will be accelerated; the mechanism for determining and adjusting benefits will be improved; the basic pension for urban and rural residents will be gradually raised; adjustments to the basic pensions of retirees will be tilted toward groups receiving lower benefits; coverage of enterprise annuities will be expanded; the individual pension policy will be improved; and commercial old-age insurance will be vigorously developed. The multi-tiered medical security system will be improved; settlement of medical expenses incurred outside one's home locality will be improved; and the supplementary protection role of commercial medical insurance will be fully leveraged. Participation rates of people in flexible employment, rural migrant workers and people in new forms of employment will be increased; contribution bases will be reasonably determined; and the contribution responsibilities of employers and platform enterprises will be clearly defined. Coverage of social insurance such as unemployment and work-related injury insurance will be expanded, and a system of occupational injury protection will be established and improved. Policies for the transfer and continuation of social insurance relationships will be improved, and the efficiency of transferring and continuing old-age insurance relationships will be increased. The unified national public service platform for social insurance and the related administrative services will be optimized.

Section 2 Enhancing the Sustainability of the Social Insurance System

The actuarial system for social insurance will be improved, and mechanisms for the long-term pooling of social security funds, their coordinated allocation, value preservation and appreciation, and safety oversight will be refined. The strategic reserve fund for social security will be strengthened and improved, and state capital will continue to be transferred to replenish social security funds. Incentives for participation and contribution will be strengthened; qualified collective economic organizations and others will be encouraged to subsidize urban and rural residents' insurance contributions; and the fiscal subsidy standard for basic medical insurance for urban and rural residents will be reasonably raised. The national pooling system for basic old-age insurance will be

improved and implemented; provincial-level pooling of basic medical insurance will be basically achieved; and provincial-level pooling of unemployment and work-related injury insurance will be consolidated. Policies for social security fund investment and the oversight system will be improved, information disclosure and performance evaluation will be strengthened, and oversight of medical insurance funds will be strengthened.

Section 3 Improving the Social Assistance System

A tiered, categorized and urban-rural coordinated social assistance system will be improved. The basic livelihood assistance system and the specialized assistance system will be improved; social assistance standards will be adjusted dynamically; and assistance will be strengthened for families just above the subsistence allowance line and for families facing difficulties due to rigid expenditures. Service-type social assistance will be actively developed, and coordination among various social assistance policies will be strengthened. The temporary assistance system will be improved, and assistance will be provided directly by the place where an emergency or difficulty occurs. The mechanism for identifying and monitoring assistance recipients will be improved; the assistance system will be effectively linked with other policies; and recipients' internal drive to overcome difficulties will be stimulated.

CHAPTER 44

Promoting High-Quality Development of Real Estate

The building of a new model for real estate development will be accelerated; the housing system featuring supply by multiple entities, support through multiple channels and the simultaneous development of renting and purchasing will be improved; and the goal of ensuring that all people have a place to live will be achieved at a higher level.

Section 1 Improving the Housing Security System

The supply of government-subsidized housing will be optimized; housing security for low-income urban families with housing difficulties will be strengthened; the basic housing needs of wage earners with housing difficulties and modest incomes will be better met; and the temporary housing difficulties of new urban residents, young people and other groups will be gradually resolved. Whole-process management of government-subsidized housing will be strengthened, and management mechanisms for application, waiting lists, allocation for rent or sale, use and exit will be improved. Ways to orderly convert and coordinate the use of rental-type and sale-type government-subsidized housing will be explored. Reform of the housing provident fund system will be deepened; its scope of use will be expanded; and people in flexible employment will be supported in participating in the housing provident fund system.

Section 2 Promoting the Steady and Healthy Development of the Real Estate Market

The basic systems for commercial housing development, financing and sales will be improved. The project company system and the lead bank financing system for real estate development will be implemented; reasonable real estate financing needs will be met; and sales of completed housing will be advanced steadily and in an orderly manner. The scale and layout of real estate land supply will be reasonably arranged, and land supply will be coordinated with the existing housing stock and population changes. Urban governments will be fully granted autonomy in regulating the real estate market. Classified handling of land that has been supplied but not developed and of projects under construction will be promoted, and the revitalization and use of unsold commercial housing and idle commercial and office properties will be advanced. The supply of housing for improved living conditions will be increased in light of each city's conditions. Safe, comfortable, green and smart "good homes" will be built, and a housing quality improvement project and an initiative to improve property management service quality will be implemented. The housing rental market will be developed in a well-regulated manner, and market-oriented and professional rental enterprises will be cultivated. A system for whole-life-cycle safety management of housing will be established.

CHAPTER 45

Steadily Advancing Equal Access to Basic Public Services

The balance and accessibility of basic public services will be enhanced, and more notable substantive progress will be made in ensuring equal access to basic public services.

Section 1 Establishing the Institutional Framework for Equal Access to Basic Public Services

Plans and policies for equal access to basic public services will be formulated and implemented; equal access to basic public services for the resident population will be achieved more quickly; the balanced development of urban and rural basic public services within county areas will be advanced in an orderly manner; and gaps in basic public service resources between regions will be gradually narrowed. Guided by equal opportunities and broadly comparable outcomes, a system of evaluation standards for equal access to basic public services will be established; evaluation standards will be refined by field; and evaluation of the degree to which equal access is achieved will be explored. Focusing on such areas as childcare, education, employment, medical care, elderly care, housing and assistance for vulnerable groups, the scope and content of basic public services will be improved; services urgently needed by the people will be incorporated in due course; national standards will be adjusted dynamically; and standards will be better coordinated across regions. More public services will be channeled down to the grassroots, extended to rural areas and tilted toward remote areas and people in difficult circumstances. Coordination of basic public service provision within counties will be strengthened, and long-term mechanisms for funding guarantees will be improved.

Section 2 Comprehensively Providing Basic Public Services at the Place of Residence

Mechanisms for allocating public resources in line with the resident population will be improved. In cities with large concentrated inflows of population, tiered provision of scarce public services based mainly on years of employment and residence will be implemented in a well-regulated manner, and the number of tiers and differences in services will be gradually reduced. The policy of allowing holders of residence permits to participate in basic medical insurance for urban and rural residents will be implemented. The non-registered resident population will gradually be included in child welfare, social assistance and other services at their place of residence. Reform of public institutions will be comprehensively deepened; the structure and layout of public institutions in the public service sector will be optimized; and the fiscal transfer payment allocation mechanism, which takes full account of factors such as the number of resident service recipients and service costs, will be consolidated and improved.

CHAPTER 46

Safeguarding the Development Rights and Interests of All Groups

The care service system will be improved; a social environment that effectively safeguards the development rights and interests of women, minors, young people, people with disabilities and other groups will be created; and services and support for veterans will be improved.

Section 1 Promoting Gender Equality and the All-Round Development of Women

The basic state policy of gender equality will be upheld, and women will be guaranteed equal participation in economic and social development, equal exercise of democratic rights and equal enjoyment of the fruits of reform and development in accordance with the law. The maternal and child health service system will be improved; comprehensive prevention and treatment of breast and cervical cancer will be strengthened; and free vaccination against human papillomavirus (HPV), as part of the national immunization program, will be fully implemented for girls of the appropriate age. Women's equal rights to education and employment will be safeguarded; rural women's membership rights in collective economic organizations and their rights to land contract management will be safeguarded in accordance with the law; and women will be supported in participating in grassroots governance. Domestic violence will be continuously prevented and stopped, and illegal and criminal acts infringing on women's rights will be severely punished.

Section 2 Strengthening Care and Protection for Minors

Priority will be given to children's development, and children's rights to survival, development, protection and participation will be effectively guaranteed. Early screening and intervention for children's myopia, overweight and obesity, autism and other conditions will be advanced. The level of children's medical and health care services will be improved, and the variety of pediatric medicines will be enriched. Care services for children in difficulty will be strengthened; classified assistance for migrant children and left-behind children will be advanced; and the level of welfare protection will be effectively raised. Services for early childhood development will be improved. A plan of action for the prevention and control of childhood injuries will be formulated and implemented; efforts to prevent and address juvenile delinquency will be strengthened; and school bullying will be effectively prevented and addressed. Online protection for minors will be strengthened, and the space and platforms for online education of young people will be expanded. Child-friendly development will be advanced, and a social environment that cares for the next generation will be created.

Section 3 Supporting Youth Development

Plans and policies to promote youth development will be improved, and favorable conditions will be created for young people to grow and succeed and to make their mark. Ideological and political guidance for young people and the shaping of their values will be strengthened; youth programs for making contributions in such fields as scientific and technological innovation and rural revitalization in the new era will be carried out in depth; and young people will be supported in becoming pioneers and the main force in all fields and aspects of work. Young people will be helped to resolve practical difficulties in study, work, innovation and entrepreneurship, marriage and childbearing, housing security, social integration and other areas. Mechanisms for young people to express their interests and for responding to their demands will be improved, and channels for young people to participate in social governance in an orderly manner will be expanded.

Section 4 Improving Services and Support for Veterans

Reform of the management of veterans will be deepened, and the organizational management, work operation, and policy and regulation systems will be improved. The mechanism for determining and adjusting preferential care benefits will be improved; the coordinated management of preferential care items will be strengthened; and the assistance, aid and legal service systems for veterans will be improved. Management reform of hospitals and homes of glory for entitled groups will be deepened, and the medical and convalescent care system for entitled groups will be improved. High-quality resettlement and employment of veterans will be advanced; resettlement measures will be improved; and policy support and service guidance will be strengthened. The system of honors, incentives, commendations and awards for veterans will be improved. Efforts to build model cities and counties of mutual support between the military and the people will be strengthened and improved. The spirit of martyrs will be vigorously promoted.

Section 5 Enhancing the Protection and Development Capacity of People with Disabilities

The social security and care service systems for people with disabilities will be improved, and the all-round development of programs for people with disabilities will be promoted. Safety-net protection will be strengthened for people with severe disabilities, people with multiple disabilities, and families with more than one member with disabilities; the systems of living allowances for people with disabilities in difficulty and nursing subsidies for people with severe disabilities, as well as the mechanism for dynamically adjusting subsidy standards, will be improved; rehabilitation assistance for children with disabilities will be strengthened; and the subsidy system for assistive devices for people with disabilities will be improved. Community and family support for people with disabilities will be improved; care for people with severe disabilities will be strengthened; and community-based rehabilitation for mental disorders will be developed. Employment assistance for people with disabilities will be strengthened, and mechanisms for promoting proportional employment, concentrated employment and self-employment will be improved. Cultural and sports activities for people with disabilities will be developed.

The use of science and technology to assist people with disabilities will be advanced in depth, and barrier-free environments will be developed in public facilities, information exchange and social services.

Box 19 Improving Social Care Services

01 Care for Children in Difficulty and Left-Behind Children

Basic living security for children in difficulty will be strengthened, and the service and support system covering medical rehabilitation, basic public education, psychological health care, personal safety and legal guardianship will be improved. The service functions of child welfare institutions will be expanded to provide care, rehabilitation, special education and other services to society, and the coverage of rescue and protection services for minors will be broadened. Care activities will be carried out regularly for left-behind children, orphans living in scattered communities and children de facto without caregivers.

02 Preferential Treatment for Veterans and Commemoration of Martyrs

The service capacity of preferential treatment hospitals, homes of honor and the like will be enhanced. Martyrs' memorial facilities will be renovated, and their exhibition and management and upkeep levels will be raised. Continued efforts will be made to search for and protect the remains of missing martyrs and to help martyrs' families find their relatives.

03 Services for Persons with Disabilities

A number of specialized service facilities for rehabilitation, care and nursing, and vocational education for persons with disabilities will be built. The specialized service capacity of rehabilitation institutions will be enhanced, and the Rehabilitation University will be well run. Qualified elderly care institutions will be encouraged to set up "elderly parents plus children with disabilities" family care units. Support will be given to barrier-free renovation of the homes of families in difficulty with severely disabled members.

04 Public Welfare Funeral and Burial Services

A basic funeral and burial service system will be established and improved, and comprehensive supervision of the funeral and burial industry will be strengthened. A number of funeral parlors will be built or renovated, and outdated cremation equipment will be replaced. A number of public welfare land-saving and ecological burial facilities will be built, and such practices as columbarium placement of ashes, tree burial and sea burial will be promoted in light of local conditions.

PART 13

Accelerating the Comprehensive Green Transformation of Economic and Social Development and Building a Beautiful China

Firmly establish and practice the principle that lucid waters and lush mountains are invaluable assets, take carbon peaking and carbon neutrality as the guiding force and the improvement of the institutional systems for ecological civilization as the guarantee, pursue coordinated progress in cutting carbon emissions, reducing pollution, expanding green development and promoting growth, improve the quality of the ecological environment, build solid ecological security barriers, and strengthen the momentum for green development.

CHAPTER 47

Actively and Prudently Advancing and Achieving Carbon Peaking

Coordinate development and emissions reduction, carry out carbon peaking actions in a solid manner, accelerate the adjustment and optimization of the industrial, energy and transport structures, and ensure that the carbon peaking target is achieved on schedule.

Section 1 Fully Implementing the System of Dual Control over Total Carbon Emissions and Carbon Emission Intensity

Combine policy guidance with market incentives and steadily implement policies and systems such as local carbon assessments, sectoral carbon control, enterprise carbon

management, project carbon evaluation and product carbon footprints. Establish a comprehensive evaluation and assessment system for carbon peaking and carbon neutrality, break down the dual carbon control targets in a scientific and rational manner, and ensure that responsibility for delivering on carbon emissions targets is firmly shouldered. Establish a sectoral carbon emission control mechanism, clarify carbon emission management requirements for key sectors and fields, and advance capacity governance and dual carbon control in a coordinated way. Improve the management systems for key energy-using and carbon-emitting entities. Strengthen energy conservation reviews and carbon emission evaluations for fixed-asset investment projects, and require new, expanded and renovated energy-intensive and high-emission industrial projects to implement equivalent or reduced carbon emission replacement. Formulate rules and standards for product carbon footprint accounting, release carbon emission cap standards for key products, and establish a product carbon labeling and certification system. Improve the carbon emission statistics and accounting system and the dynamic monitoring and early warning mechanism, and compile the national greenhouse gas inventory on a regular basis. Expand the coverage of the national carbon emissions trading market and accelerate the development of the trading market for voluntary greenhouse gas emission reductions.

Section 2 Promoting Energy Conservation and Carbon Reduction in Key Areas

Carry out in-depth energy conservation and carbon reduction retrofits, step up efforts to control and reduce coal consumption, accelerate the meeting of incremental electricity demand with newly added clean energy generation, promote the peaking of coal and oil consumption, and reduce energy consumption per unit of GDP by around 10%. Effectively manage energy-intensive and high-emission projects, accelerate the innovation and application of green and low-carbon technologies and equipment, orderly relocate eligible energy-intensive industries to regions rich in renewable energy resources, and build zero-carbon factories and industrial parks. Strengthen energy conservation and carbon reduction retrofits of existing buildings and municipal facilities, promote the development of ultra-low-energy and prefabricated buildings on a large scale, and implement actions to improve cooling efficiency and promote green lighting. Accelerate the green and low-carbon transformation of heating systems, promote the use of waste heat and non-fossil energy for heating in light of local conditions, and orderly advance metering-based heating retrofits and heat-based billing. Promote the low-carbon substitution of transport power sources, accelerate electrification in the freight and public sectors and the application of green-fuel vehicles and vessels, and increase the share of bulk cargo transported by rail and water and the share of transport carried by new energy vehicles. Improve energy efficiency in emerging fields such as computing power facilities and 5G base stations. Improve energy efficiency diagnostic mechanisms in key fields and further implement the energy efficiency labeling system and the energy efficiency “front-runner” system. Further develop pioneering zones for green, low-carbon and high-quality development.

Section 3 Enhancing Capacity to Respond to Global Climate Change

Place equal emphasis on mitigation and adaptation, bring greenhouse gas emissions under comprehensive control, and actively respond to the adverse effects and risks of climate change. Strengthen the monitoring and control of non-carbon dioxide greenhouse gases, increase the carbon sink increment of ecosystems, and improve the carbon sink monitoring and accounting system. Improve the climate change adaptation framework, strengthen assessments of the risks and impacts of climate change on key vulnerable sectors and regions, and enhance capacity to respond to climate change, especially extreme weather. Actively participate in and lead global climate governance, uphold the principle of common but differentiated responsibilities, fully implement the United Nations Framework Convention on Climate Change and its Paris Agreement, and deepen South-South cooperation on climate change.

Box 20 Carbon Peaking and Carbon Neutrality

01 Energy Conservation and Carbon Reduction in Key Industries and Fields

Greater efforts will be made to upgrade key industries and fields such as thermal power, steel, non-ferrous metals, petrochemicals, chemicals and building materials for energy conservation and carbon reduction; energy-saving and low-carbon technologies will be promoted and applied; energy savings of more than 150 million tonnes of standard coal equivalent will be achieved; and energy consumption per unit of floor area in public institutions will be reduced by 5 percent.

02 Clean Substitution of Coal Consumption

A number of demonstration projects for low-carbon upgrading of coal-fired power units, such as co-firing of biomass and co-firing of green ammonia, will be built; low-carbon upgrading projects in the coal chemical industry will be fully implemented; clean substitution of coal-fired boilers and industrial kilns in industries such as food, textiles and papermaking will be advanced; and substitution of coal consumption will reach 30 million tonnes per year.

03 Development of Zero-Carbon Parks and Zero-Carbon Transport Corridors

The model of manufacturing green products with green energy will be developed; direct supply of green electricity will be developed according to local conditions; and about 100 national-level zero-carbon parks will be built. Focusing on transport corridors with concentrated freight volumes, facilities such as battery charging and swapping, hydrogen, ammonia and methanol refueling, and integrated solar power generation and storage will be built, and a number of demonstration sections (shipping routes) of zero-carbon transport corridors will be developed.

04 Circular Economy Support for Carbon Reduction

The systems for refined collection and recycling of waste, processing and utilization of renewable resources, and promotion and application of high-quality recycled materials will be improved; the high-value and standardized utilization of products such as waste electrical and electronic equipment, used power batteries, decommissioned wind and solar power equipment and end-of-life vehicles will be raised; and

the output rate of major resources will increase by about 16 percent.

05 Reduction of Non-CO2 Greenhouse Gas Emissions

In fields such as coal mining, crop cultivation and livestock breeding, waste treatment and chemical production, projects to control non-CO2 greenhouse gases such as methane, nitrous oxide and hydrofluorocarbons will be implemented, and the capacity to reduce emissions by 30 million tonnes of CO2 equivalent will be developed.

06 Enhancing the Basic Capacity for Carbon Peaking and Carbon Neutrality

The national comprehensive carbon emission data management system, the national database of greenhouse gas emission factors and the national carbon metrology laboratory will be built. Innovation in and engineering application of carbon dioxide capture and biological carbon sequestration technologies will be strengthened, and the construction of carbon capture, utilization and storage demonstration projects will be supported.

CHAPTER 48

Continuing to Improve Environmental Quality

Adhere to environmental protection for the people, fully implement targeted, scientific and law-based pollution control, place greater emphasis on source control, strengthen coordination between pollution reduction and carbon reduction, between the control of multiple pollutants and between regional governance efforts, and accelerate the shift of environmental quality improvement from quantitative accumulation to qualitative change.

Section 1 Deepening the Battles to Keep the Skies Blue, the Waters Clear and the Land Clean

Continue to deepen the battle against pollution and improve the quality of the atmospheric, water and soil environments to higher standards. Take key regions such as the Beijing-Tianjin-Hebei region and its surrounding areas, the Yangtze River Delta and the Fenwei Plain as the main battlegrounds, strengthen control of fine particulate matter (PM2.5), further advance ultra-low emission retrofits in key industries, promote source substitution and whole-process treatment of volatile organic compounds, set the next-stage standards for motor vehicle emissions and fuel quality, deepen tiered management of atmospheric environmental performance, reduce emissions of nitrogen oxides and volatile organic compounds by more than 8% each, and further eliminate heavily polluted weather. Strengthen air pollution prevention and control in the middle reaches of the Yangtze River, the Chengdu-Chongqing region and other areas. Strengthen the treatment of cooking fume, odor and environmental noise pollution. Take coordinated action on water resources, the water environment and the aquatic ecosystem, focus on

solving prominent problems across whole river basins and across provincial boundaries, strengthen the systematic governance and ecological protection of major rivers, lakes and reservoirs, basically complete the investigation and remediation of sewage outfalls into rivers and the sea in key river basins and sea areas, reduce chemical oxygen demand and total phosphorus emissions by 6% each, consolidate the results of urban black and odorous water body treatment, and basically eliminate black and odorous water bodies in counties and townships. Strengthen source prevention and control of soil pollution and promote the safe use of contaminated farmland and construction land.

Section 2 Strengthening Environmental Risk Prevention and Control

Bring ecological and environmental risks under routine control and effectively safeguard public health and safety. Implement a comprehensive solid waste treatment action, actively advance source reduction, process control, end-of-pipe utilization and full-chain non-hazardous management, and improve standardized control over solid waste disposal. Strengthen whole-process supervision of hazardous waste, focus on controlling heavy metal pollution risks, and carry out the investigation and remediation of hidden dangers left over from the past in slag, mines, tailings ponds and other sites. Further advance the treatment of emerging pollutants and establish a system for the coordinated treatment and risk control of persistent organic pollutants, endocrine disruptors, antibiotics, microplastics and other pollutants. Promote high-standard design, high-quality construction and high-level operation of nuclear facilities, strengthen safety supervision of first-of-a-kind and new reactors, strengthen the decommissioning and remediation of aging facilities and the disposal of radioactive waste, and enhance radiation environment monitoring capacity. Improve the emergency response system for environmental emergencies involving cross-regional and cross-departmental coordination. Carry out ecological and environmental health risk assessments in key regions.

Section 3 Improving the Modern Environmental Governance System

Implement the Ecological Environment Code, improve the responsibility system, the regulatory system and the system of laws, regulations and standards, and enhance the effectiveness of environmental governance. Ensure that Party committees and governments at all levels and leading officials fulfill their responsibilities for ecological and environmental protection, further advance central and provincial ecological and environmental protection inspections, and improve inspection support capacity and the modernization of monitoring and supervision. Continue to develop national ecological civilization pilot zones. Carry out performance assessments of Beautiful China development and build Beautiful China pioneer zones. Further advance zoning-based ecological and environmental control, strengthen alignment with territorial space planning, and jointly optimize the industrial layout. Accelerate the implementation of a supervision system for stationary pollution sources centered on the pollutant discharge permit system. Update pollutant discharge and environmental quality standards and build an environmental credit supervision system.

Box 21 Improving Environmental Quality

01 Improving Air Pollution Prevention and Control

Ultra-low emission upgrading will be completed for 500 million tonnes of cement clinker capacity and 100 million tonnes of coking capacity. The replacement of China IV and below trucks and China II and below construction machinery will be accelerated, and old operating ships will be scrapped and replaced. Focusing on the Beijing-Tianjin-Hebei region and surrounding areas, industrial coal-fired boilers of 65 steam tonnes per hour and below will be phased out, sintered brick production lines below 60 million standard bricks per year will be consolidated and withdrawn, coal-fired power plants will complete full-load denitration upgrading, and comprehensive air pollution control will be carried out in industrial clusters.

02 Coordinated Governance of Water Resources, Water Environment and Water Ecology

Focusing on the Yangtze, Yellow, Pearl, Huai and Songhua river basins, sections where total phosphorus concentrations exceed standards will be remediated and comprehensive water ecology governance will be carried out. Total nitrogen treatment and control will be implemented for state-controlled rivers entering the sea, and standardized development of drinking water sources will be advanced. Ecological protection and governance will be carried out in a coordinated way for 30 key lakes and reservoirs, including Taihu Lake, the Danjiangkou Reservoir area, Chaohu Lake, Erhai Lake, Baiyangdian Lake, Ulansuhai Lake and Honghu Lake, and protection and governance of the Grand Canal will be strengthened. The construction and upgrading of urban domestic sewage collection and treatment facilities will be advanced. Reclaimed water utilization projects will be implemented in the Beijing-Tianjin-Hebei region and the Yellow River basin.

03 Source Control and Treatment of Soil Pollution

Focusing on industries such as petrochemicals and chemicals, projects for source control of soil pollution will be implemented. Tracing and remediation of heavy metals in agricultural land soil in key counties will be carried out. A special project for treating soil pollution on chemical industry sites vacated within 1 kilometer along the Yangtze River will be implemented.

04 Comprehensive Treatment of Solid Waste

Investigation and treatment of environmental risks at phosphogypsum storage sites in the Yangtze River basin will be advanced. Facilities for the collection, temporary storage, resource utilization and disposal of construction waste will be built and upgraded. Facilities for the classified drop-off and collection and transfer of urban household waste will be upgraded, and waste removal capacity will reach 750,000 tonnes per day.

05 Key Control of Hazardous Waste

Hazardous waste landfills that do not meet standards will be upgraded, and decommissioned hazardous waste landfills will undergo comprehensive closure and treatment. Systematic treatment of pollution around tailings ponds in the Danjiangkou

Reservoir area and its upstream will be carried out, and a number of projects to remediate environmental safety hazards in legacy heavy metal mining areas will be implemented.

06 Coordinated Treatment of Emerging Pollutants

A number of demonstration projects for the coordinated treatment of emerging pollutants will be implemented in fields such as industrial wastewater, urban sewage and livestock and poultry farming. Coordinated monitoring and hazard assessment of emerging pollutants will be carried out, and the capacity to detect, track and respond to emerging pollutants will be improved. National and river-basin technical centers for the treatment of emerging pollutants will be established.

CHAPTER 49

Enhancing the Diversity, Stability and Sustainability of Ecosystems

Uphold integrated protection and systematic governance of mountains, rivers, forests, farmland, lakes, grasslands and deserts, coordinate natural restoration and artificial restoration, place greater emphasis on improving quality, developing industries and benefiting the people, and build a major framework for protection and governance stretching from the mountain tops to the sea.

Section 1 Consolidating and Improving Ecological Security Barriers

Coordinate the advancement of major projects for the protection and restoration of important ecosystems, and continue to consolidate the national ecological security barrier system with the "three zones and four belts" as its framework. Intensify the battle to advance the Three-North Shelterbelt Program and secure a decisive victory in its three landmark campaigns. Further advance ecological protection of the Qinghai-Tibet Plateau and strengthen the control of soil erosion and rocky desertification in key regions. Carry out large-scale national greening initiatives on a scientific basis, promote the precise improvement of forest quality and the development of national reserve forests, increase forest stock volume to 22.4 billion cubic meters, coordinate grassland ecological restoration and rational utilization, and strengthen wetland protection and restoration. Advance the treatment of over-diversion of surface water and over-extraction of groundwater, and carry out ecological restoration of abandoned mines left over from the past.

Section 2 Comprehensively Advancing the Development of the Protected Natural Areas System

Carry out the integration and optimization of protected natural areas, implement tiered management and zoning-based control, and establish a sound system of protected natural areas with national parks as the mainstay. Establish new national parks in an orderly manner and improve the ecological service functions of nature reserves and nature parks. Implement major biodiversity conservation projects, focus on the protection of flagship and key species, strengthen the protection and restoration of important habitats, ecological corridors and migratory bird flyways, continue to strengthen the protection of aquatic life in the Yangtze River, develop a national botanical garden system, and strengthen the protection of ancient and famous trees. Strengthen forest and grassland fire prevention and control and pest control, and strengthen the monitoring and control of invasive alien species.

Section 3 Improving Ecological Protection Mechanisms

Place equal emphasis on strict constraints and stronger incentives in order to stimulate an internal impetus within the whole of society to protect the ecology. Strictly implement the management system for ecological conservation red lines, strengthen the investigation and remediation of ecological damage, and carry out assessments of the effectiveness of ecological protection and restoration. Improve the property rights and management systems for natural resource assets and comprehensively advance asset surveys and accounting and the confirmation and registration of rights. Improve the diversified ecological compensation mechanism, improve transfer payments to key ecological function zones and compensation policies for important ecosystems such as forests and grasslands, improve the dynamic adjustment mechanism for compensation standards, carry out in-depth horizontal compensation with a focus on river basins, develop market-based ecological compensation, and explore comprehensive ecological compensation. Expand channels for realizing the value of ecological products in light of local conditions. Improve the ecological and environmental damage compensation system. Deepen reform of the collective forest tenure system and state-owned forest areas and accelerate the development of modern state-owned forest farms.

Box 22 Ecological Protection and Restoration

01 Phase VI of the “Three-North” Shelterbelt Program

With the aim of consolidating the northern ecological security shield, battles will be won at the Yellow River “Jizi Bend”, in the Horqin and Hunshandake sandy lands, and in the blocking battle along the edge of the Hexi Corridor–Taklimakan Desert; forest and grass coverage in the program area will reach 40.9 percent; the treatment rate of treatable desertified land will reach 67 percent; comprehensive vegetation coverage on desertified land will reach 22 percent; and ecological protection and restoration will be promoted in the Yellow River key ecological area, the northern sand prevention belt and the northeast forest belt.

02 Ecological Protection and Restoration in the Qinghai-Tibet Plateau Ecological Barrier Area

Aiming to accelerate the building of a national ecological civilization highland, protection of plateau forests, meadow grasslands, snow-capped mountains, glaciers and frozen soil will be strengthened; greater efforts will be made to treat black-soil flat type degraded grasslands and desertified grasslands; comprehensive treatment of desertified land and restoration of the ecological functions of important wetlands will be advanced; the support system for protecting the Sanjiangyuan "China Water Tower" will be improved; 2.5 million hectares of degraded grassland will be restored; and 1 million hectares of desertified land will be comprehensively treated.

03 Ecological Protection and Restoration in the Yangtze River Key Ecological Area

Comprehensive treatment of soil erosion and rocky desertification will be strengthened; ecological protection and restoration of rivers, lakes and wetlands such as Poyang Lake and Dongting Lake will be promoted; forest tending and the transformation of low-quality and inefficient forests will be carried out; and 6 million hectares of additional soil erosion control area and 1.3 million hectares of rocky desertification land treatment area will be added.

04 Ecological Protection and Restoration in the Southern Hilly and Mountainous Belt

The shelterbelt system will be improved; rocky desertification control in karst areas will be advanced; important wetlands will be better protected and restored; the ecological quality of key areas such as the Nanling Mountains, the Wuyi Mountains and the Xiang-Gui karst area will be continuously improved; 300,000 hectares of additional rocky desertification land will be treated; and 110,000 hectares of afforestation will be completed.

05 Ecological Protection and Restoration of Coastal Zones

With the aim of building a harmonious, safe and resilient coastal ecological security shield between people and the sea, damaged and degraded beaches and ecosystems will be restored; comprehensive treatment of ecological disasters such as green tides of Ulva prolifera will be carried out; the quality and stability of typical ecosystems such as mangroves, coral reefs and seagrass beds will be improved; 20,000 hectares of coastal wetlands will be renovated and restored; and 400 kilometers of coastline will be restored.

06 Building the Protected Areas System and Protecting Wild Animals and Plants

The capacity of national parks and other protected areas in protection and management, scientific research and monitoring, and science popularization and education will be enhanced, and the establishment of national botanical gardens such as Shanghai Chenshan and Xishuangbanna will be advanced. The restoration of important habitats for wild animals and plants will be strengthened, and bases such as rescue centers for rare and endangered wild animals and plants, germplasm breeding centers, and rewilding and release bases will be built.

CHAPTER 50

Accelerating the Formation of Green Modes of Production and Ways of Life

Give prominence to conservation as a priority, strengthen policy incentives and guide the whole of society to participate, accelerate the green and low-carbon transformation of development modes, and foster new green modes of production and new lifestyles.

Section 1 Strengthening the Economical and Intensive Use of Resources

Improve the systems for total resource volume management and comprehensive conservation, and strengthen whole-process management and full-chain conservation of water, land, mineral and other resources. Improve the level of intensive and safe water use, fully implement the rigid water resource constraint system, strengthen water conservation to increase efficiency in agriculture, reduce emissions in industry and cut losses in urban areas, reduce water consumption per unit of GDP by 10%, and raise the effective utilization coefficient of irrigation water to 0.6. Improve the efficiency of construction land use, promote the application of land-saving technologies and models, and keep newly added construction land within 26 million mu. Improve the comprehensive utilization of mineral resources and comprehensively advance green exploration and green mine development. Promote the development of the circular economy, improve the waste recycling system, and, on the premise of ensuring zero imports of solid waste, orderly advance the import and utilization of high-quality recycled raw materials from overseas, develop and expand the remanufacturing industry, and bring the annual utilization of bulk solid waste to around 4.5 billion tonnes.

Section 2 Improving the Green Development Policy System

Innovate protection and investment incentive mechanisms and implement fiscal, tax, financial, investment, pricing, scientific and technological, and environmental protection policies that promote green and low-carbon development. Optimize the green tax system, carry out pilot programs for levying environmental protection tax on volatile organic compounds, and implement tax incentives that support resource conservation and the use of green products. Enrich green financial products and services, orderly advance innovation in carbon financial products and derivatives, improve the green finance assessment and evaluation system for financial institutions, and encourage a higher share of investment in green and low-carbon fields. Improve the green certificate trading mechanism and improve pricing policies that encourage flexible power sources to participate in system regulation. Establish a sound green and low-carbon standards system and work to lead the improvement of international rules and standards and their alignment and mutual recognition.

Section 3 Launching a Nationwide Green and Low-Carbon Action

Vigorously advocate a simple and moderate, green and low-carbon, civilized and healthy philosophy of life and mode of consumption. Guide the public to save water and electricity, oppose extravagance and waste, promote the "Clear Plate" campaign, resist excessive packaging, reduce the use of single-use products, accelerate the development of "bamboo as a substitute for plastic", and give priority to green travel. Encourage enterprises to improve green design and manufacturing and to reduce the energy and resource consumption and ecological and environmental impact of products throughout their life cycles. Improve waste sorting and resource recovery. Improve incentive mechanisms for green consumption and expand the scope and scale of government procurement of green products.

PART 14

Modernizing the National Security System and Capacity and Building a Peaceful China at a Higher Level

Unwaveringly implement the holistic approach to national security, accelerate the creation of a new security architecture, strengthen strategic initiative in safeguarding and shaping national security, follow the path of socialist social governance with Chinese characteristics, and ensure that society remains both vibrant and well-ordered.

CHAPTER 51

Strengthening the National Security System and Capacity

Take strategy as the guide, policy as the lever, the rule of law as the guarantee and risk prevention and control as the ultimate objective; consolidate the centralized, unified, efficient and authoritative leadership system for national security; formulate and implement the national security strategy; and improve the national security legal system, strategy system, policy system and risk prevention and control system. Strengthen coordination mechanisms for key areas and important special items of national security, and improve the effectiveness of emergency response and contingency handling. Implement the national security responsibility system, promote coordination and interaction across the whole chain and all elements, and create synergy across the system. Strengthen national security capacity building in key areas, forge practical and effective national security capabilities, give prominence to safeguarding the major security interests vital to long-term national stability, the sound and stable development of the economy and the people's peace and contentment, put the defense of political security first, firmly safeguard the security of state power, the system and ideology, and severely crack down on infiltration, sabotage, subversion and separatist activities by hostile forces. Consolidate

the foundational support for national security, strengthen the empowerment of science and technology, and strengthen national security capacity building in emerging fields. Safeguard state secrets in key areas. Improve national security mechanisms involving foreign countries, build an overseas security guarantee system, strengthen the struggle against sanctions, interference and "long-arm jurisdiction", and deepen international law enforcement and security cooperation. Strengthen national security education and build a solid people's line of defense.

CHAPTER 52

Safeguarding National Economic Security

Focus on key commodities to strengthen the security of strategic materials, focus on systemically important fields to prevent and defuse major risks, focus on new industries, new forms of business and new application scenarios to improve risk prevention and control in weak links, and drive an all-round improvement in security capacity by precisely shoring up shortcomings.

Section 1 Strengthening Capacity for Ensuring Food Security

Adhere to the approach of self-reliance, with domestic production as the basis, production capacity as the guarantee, moderate imports as a supplement and science and technology as the support; improve the coordinated capacity to guarantee grain production, purchasing, storage, processing and marketing; and ensure the basic self-sufficiency of grain and the absolute security of staple food. Strictly implement the requirement that Party committees and governments at all levels share equal responsibility for farmland protection and food security, and strictly observe the farmland red line. Strengthen grain purchasing, marketing and reserve management, keep the scale of government grain reserves relatively stable, strengthen the regulatory function of reserves, and improve new models of grain supervision. Further implement the high-quality grain project and advance quality improvement and efficiency gains in grain circulation. Advance conservation and loss reduction across the entire post-harvest grain chain and implement the whole-grain action plan. Improve the chemical fertilizer reserve system and ensure the supply and stabilize the prices of potash, phosphate and other fertilizers. Establish stable and controllable overseas supply channels, diversify imports of agricultural products, import scarce high-quality varieties in moderation, and promote coordination between trade and production.

Section 2 Strengthening Energy and Resource Supply Guarantees

Adhere to relying on domestic supply, shoring up weak links, diversifying guarantees and strengthening reserves, and strengthen the development of the energy production, supply, storage and marketing system. Maintain independent guarantees for core oil and gas demand, implement the strategic action for medium- and long-term increases in oil and gas reserves and production, ensure that annual crude oil output remains stable at around 200 million tonnes and that natural gas output grows steadily, and strengthen coal-to-oil and coal-to-gas production capacity and technological reserves. Strengthen coordination between government and enterprise reserves, expand the scale of national oil reserves, establish a more flexible rotation and drawdown mechanism, enhance the regulating and guaranteeing capacity of natural gas reserves, and improve the coal reserve system. Improve the medium- and long-term contract system for energy supply guarantees, improve the emergency power dispatch mechanism and backup power configuration, and strengthen energy demand-side management. Strengthen the exploration, development and reserves of strategic mineral resources, further implement the new round of the strategic action for breakthroughs in mineral exploration, strengthen in a coordinated way reserves of products, production capacity and production sites, promote the development of bulk commodity storage and transport bases, and improve the monitoring and early warning of security risks and the level of emergency supply guarantees for strategic mineral resources. Strengthen international cooperation in energy and resource development and safeguard the security of strategic corridors.

Section 3 Improving Long-Term Mechanisms for Preventing and Defusing Risks in Key Areas

Strengthen source prevention and control, anticipatory judgment and early warning, and early correction; advance in a coordinated way the orderly defusing of risks in real estate, local government debt, small and medium-sized financial institutions and other areas; and strictly prevent systemic risks. Improve supervision of systemically important financial institutions and strengthen macroprudential management in key areas such as financial markets and cross-border capital flows. Establish a sound full-caliber monitoring and supervision system for local government debt and a long-term mechanism for preventing and defusing hidden debt risks, tighten fiscal and financial discipline, resolutely curb new hidden local government debt, optimize the debt structure of central and local governments, and accelerate the reform and transformation of local government financing platforms. Support financial institutions in carrying out capital replenishment in a steady and orderly manner, improve the risk disposal mechanism for small and medium-sized financial institutions, enrich the resources and instruments for risk disposal, and replenish the financial stability guarantee fund, the deposit insurance fund and other industry guarantee funds. Strengthen coordination between central and local financial supervision, improve the mechanism for protecting the rights and interests of financial consumers, and severely crack down on illegal financial activities. Strengthen financial security guarantees under opening-up conditions and improve the monitoring, early warning and response mechanism for cross-border capital flows.

Section 4 Strengthening Cybersecurity Guarantees

Deepen comprehensive governance of cyberspace security and accelerate the development of the national cybersecurity defense system. Improve foundational systems such as critical information infrastructure security protection, cybersecurity review and cloud computing service security assessment, and improve laws and regulations on internet content management and online platform governance. Severely crack down on cybercrimes and strengthen the protection of personal information. Continue to carry out the "Qinglang" (Clear and Bright) series of special actions, address online rumors, cyberbullying and other disorderly phenomena, and foster a clean and upright online environment. Support technological innovation and industrial development in cybersecurity and encourage the development of secure and reliable information products and services. Advance the development of disaster recovery and backup systems and strengthen cybersecurity protection for industrial control systems and new technologies and applications. Deeply participate in global cyberspace governance and the formulation of international rules, and actively expand international cybersecurity cooperation.

CHAPTER 53

Improving the Level of Public Safety Governance

Improve the public safety system, shift the public safety governance model toward prevention in advance, and effectively safeguard the safety of people's lives and property.

Section 1 Strengthening Food and Drug Safety Supervision

Improve the whole-chain and whole-process supervision mechanism for food and drugs and improve the food and drug safety responsibility system. Strengthen food safety supervision from farm to table, strengthen source control of risks, improve the level of coordinated and smart supervision, and deepen the treatment of pesticide residues in agricultural products with prominent problems. Improve strict and efficient drug supervision, further implement the action plan for raising drug standards, and strengthen sampling and spot checks of high-risk products. Improve the quality and effectiveness of consistency evaluations of the quality and efficacy of generic drugs and strengthen the monitoring of post-marketing clinical use data. Ensure that industry supervision, territorial management and the primary responsibility of enterprises for food and drug safety are fulfilled, and intensify punishment for illegal and criminal acts. Strictly supervise the research, development and application of biotechnology and enhance the capacity to store and safely manage biological data resources.

Section 2 Improving the Level of Work Safety

Strictly implement the requirement that Party committees and governments share equal responsibility for work safety and the "three musts" requirement that those who oversee an industry, a business or production operations must also oversee safety, and effectively prevent and curb major and catastrophic accidents. Improve the intrinsic safety of important infrastructure, accelerate the phasing out and upgrading of high-risk processes and equipment in mines, hazardous chemicals, special equipment and other fields, and strengthen safety training for principal persons in charge of production and business units and for workers in special types of work. Improve the mechanisms for screening and rectifying work safety risks and for tracing responsibility, urge enterprises to improve their work safety management systems, and improve the level of work safety risk prevention and emergency response to accidents and disasters. Improve the quality and effectiveness of work safety law enforcement, establish lists of key items for law enforcement inspections in each industry, and carry out central work safety assessments and inspections in a solid manner.

Section 3 Improving the Emergency Management System

Put the people and life first, improve in an integrated way the capacity for disaster reduction and prevention, disaster resistance and fortification, and disaster relief and support, and effectively reduce losses from all types of disasters and accidents. Strengthen disaster monitoring, forecasting and early warning, and improve all-weather real-time monitoring and early warning capacity. Appropriately raise the fortification standards for key infrastructure in important cities and disaster-prone areas, and advance the development of urban public infrastructure for both normal and emergency use. Deepen emergency management reform and improve the emergency command mechanism under the "big security, big emergency response" framework. Improve the capacity for disaster prevention, reduction and relief and for handling major public emergencies, build up the national comprehensive fire and rescue force, optimize the structure and layout of professional rescue teams, and improve rescue capacity under extreme conditions. Implement actions to strengthen grassroots emergency response capacity, improve integrated grassroots emergency response and firefighting rescue, and enhance the capacity of the whole of society to prevent disasters and avoid risks. Strengthen the development and management of the emergency plan system and improve the diversified emergency supplies reserve and rapid allocation and delivery mechanism. Improve the catastrophe risk protection system and risk-sharing mechanism.

CHAPTER 54

Improving the Social Governance System

Uphold systematic, law-based, comprehensive and source-based governance, improve the social governance system based on collaboration, participation and common interests, improve the systems and mechanisms for social work and the policy, law and regulation system for social governance, and advance the modernization of social governance.

Section 1 Consolidating the Foundations of Grassroots Social Governance

Uphold and develop the "Fengqiao Experience" of the new era and improve the urban and rural grassroots governance system that combines self-governance, the rule of law and the rule of virtue under the leadership of Party organizations. Strengthen Party building-led grassroots governance and the building of grassroots political power, comprehensively implement the list of matters for which townships (subdistricts) perform their duties, improve the access system for work items in villages (communities), implement the practice of "going down to the grassroots in four respects", and improve practices such as "the street and township blow the whistle and departments report for duty". Shift the focus of social governance and services down to the grassroots, strengthen the allocation of grassroots service and management personnel, improve service facilities and funding guarantee mechanisms, improve the urban and rural community governance system, and improve the grassroots governance platform featuring grid-based management, refined services and information technology support. Improve the working mechanisms for uniting and serving the people and consolidate the popular foundation of social governance. Give play to the principal role of the people and guide all parties to participate in social governance in an orderly manner. Strengthen the ranks of social workers and improve the level of professional services. Advance coordinated online and offline governance. Strengthen the functions of public service platforms such as citizen hotlines and ensure that the people's calls always receive a response.

Section 2 Improving Governance Effectiveness in Emerging Fields

Strengthen Party building in new economic organizations, new social organizations and among new groups of people in employment, further expand the coverage of Party organizations and Party work, and strengthen and improve political guidance and service management for all types of social groups. Improve the quality of Party building in non-public enterprises, strengthen classified guidance for Party building in mixed-ownership enterprises, and give prominence to Party building in business districts, office buildings and industrial parks. Strengthen the cultivation and management of social organizations and promote the reform and development of industry associations and chambers of commerce. Strengthen the management of volunteer service organizations, improve incentive and commendation mechanisms, and develop volunteer services. Strengthen

the service, management and care of new groups of people in employment.

Section 3 Effectively Safeguarding Social Safety and Stability

Improve the mechanisms for correctly handling contradictions among the people under new circumstances, keep open and regulate channels for the public to express their demands and for coordinating interests and safeguarding rights and interests, and further advance the resolution of conflicts and disputes at the source, through multiple means and in an orderly manner. Advance the law-based handling of public complaints and petitions, continue to have leading officials receive and visit petitioners, and deepen the resolution of prominent contradictions in petitioning. Improve the social psychological service system and crisis intervention mechanisms. Further develop the overall crime prevention and control system and capacity for public order, implement responsibilities for maintaining social stability, develop and strengthen mass prevention and mass governance forces, improve the long-term mechanism for cracking down on gang crime and evil forces, and intensify the prevention and crackdown on telecom and online fraud, drug-related crime and other crimes. Advance the standardized development of comprehensive social order management centers. Comprehensively and accurately implement the criminal policy of combining leniency with severity, punish illegal and criminal acts in accordance with the law, and improve the quality and effectiveness of penalty enforcement. Advance the development of digital platforms for political and legal work.

Box 23 Improving Security Guarantee Capacity in Key Areas

01 Grain Reserves

A number of grain storage facilities will be built, upgraded and improved in an integrated layout, and the scale of high-standard grain warehouses will be steadily increased. Several port and border-crossing grain storage and logistics facilities will be upgraded to improve the efficiency of grain transshipment and transportation. Grain emergency support capacity will be enhanced.

02 Oil and Gas Exploration, Development and Reserves

Oil and gas bases in the Ordos Basin, Xinjiang and the Bohai Bay and natural gas bases in Sichuan-Chongqing and the East China Sea will be built, and coalbed methane development in the eastern Ordos Basin will be promoted. Major petroleum reserve projects will be carried out, and gas storage facilities such as Daqing Shengping, Changqing Yulin Leilongwan, the Southwest Wanshunchang and Xinjiang Baolang will be built.

03 Coal-to-Oil and Coal-to-Gas Bases

Strategic coal-to-oil and coal-to-gas bases in Ordos of Inner Mongolia, Yulin of Shaanxi, Zhundong of Xinjiang and Hami of Xinjiang will be advanced, with project reserves and resource reservations ensured.

04 New Round of Breakthroughs in Mineral Exploration

Focusing on energy minerals in short supply, scarce metal and non-metal minerals, and minerals in which China has advantages, the coverage of regional geological

surveys and mineral resource surveys will be substantially increased, the mechanism for diversified exploration investment will be improved, exploration in key exploration areas and in the deep parts of important mines will be intensified, and a number of mineral reserve sites will be developed.

05 Strategic Material Reserves and Emergency Rescue

A number of strategic material reserve bases will be built or upgraded. The building of national regional emergency rescue centers will be strengthened, national natural disaster engineering rescue bases will be upgraded, and emergency rescue capacity in areas at high risk of natural disasters will be improved. Key aviation emergency rescue forces will be strengthened.

06 Disaster Monitoring and Forecasting System

An Earth system data platform will be built; the system for monitoring, forecasting and early warning of meteorological, hydrological, geological, seismic and other disasters will be strengthened; and marine observation, forecasting and early warning capacity will be improved.

PART 15

Achieving the Centenary Goal of the People's Liberation Army on Schedule and Advancing National Defense and Military Modernization with High Quality

Implement Xi Jinping Thought on Strengthening the Military, implement the military strategic guideline for a new era, uphold the Party's absolute leadership over the people's armed forces, implement the system whereby the Chairman of the Central Military Commission assumes overall responsibility, follow the new "three-step" strategy for national defense and military modernization, strengthen the military politically and through reform, science and technology, talent and the rule of law, carry out struggle, war preparation and military development in parallel, accelerate the integrated development of mechanization, informatization and intelligentization, and enhance the strategic capacity to safeguard national sovereignty, security and development interests.

CHAPTER 55

Focusing on Improving the Quality and Efficiency of National Defense and Military Modernization

Accelerate the modernization of military theory, military organizational forms, military personnel, weaponry and equipment, and military governance, improve the capacity of the people's armed forces to win, and effectively fulfill the missions and tasks of the people's armed forces in the new era.

Section 1 Accelerating the Development of Advanced Combat Capabilities

Strengthen strategic deterrence forces and safeguard global strategic balance and stability. Advance the development of new-domain and new-quality combat forces on a larger scale, in a combat-oriented and systematic manner; accelerate the development of unmanned and intelligent combat forces and counter-capabilities; and strengthen the upgrading and transformation of traditional combat forces. Coordinate the development and application of network information systems, strengthen the development and utilization of data resources, and build an intelligent military system. Accelerate the development of modern logistics. Implement major national defense development projects, step up national defense science and technology innovation and the conversion of advanced technologies, and accelerate the development of advanced weaponry and equipment. Optimize military human resource policies and systems, improve the level of running and educating personnel in military academies, and build a high-caliber, professional, new-type military talent contingent. Implement the project to advance the modernization of military theory. Deepen strategic and operational planning, advance realistic combat-oriented military training, strengthen the integration of combat capability systems, innovate the models for building and employing combat capabilities, and enhance the relevance, initiative and shaping power of military struggle.

Section 2 Advancing the Modernization of Military Governance

Improve the leadership and management systems and mechanisms of the people's armed forces and adjust and optimize the joint operations system. Strengthen and improve strategic management, deepen the coordination of warfighting, military development and war preparation, strengthen the guiding role of operational requirements, innovate management methods and means, and improve the operational efficiency of the military system and the efficiency of national defense resource utilization. Strengthen consultation and assessment for major decisions and supervision of major projects, advance reform of military budget management, improve the military procurement system, improve the statistical evaluation system for military development, fully implement the principle of building the military through diligence and thrift, and follow a path of high efficiency, low cost and sustainable development. Continue to deepen political training and rectification, carry forward fine traditions, and strengthen the rectification and governance of key industries and fields. Further advance the development of the military rule of law, strengthen the supply of laws and regulations and supervision over their implementation, and improve the military rule-of-law system with Chinese characteristics.

CHAPTER 56

Consolidating and Enhancing an Integrated National Strategic System and Capabilities

Strengthen the coordination of military and civilian strategic planning, the alignment of policies and systems, and the sharing of resources and factors, and promote the synchronized improvement of national defense strength and economic strength. Deepen reform across the military and civilian sectors and foster a well-regulated and orderly pattern of military-civilian work in which each party performs its own functions and cooperates closely. Accelerate the building of strategic capabilities in emerging fields, improve the green channel that enables civilian entities to apply cutting-edge scientific and technological achievements in military development, and promote the efficient integration and two-way interaction between new quality productive forces and new quality combat power. Build an advanced national defense science, technology and industry system, optimize the layout of national defense science, technology and industry, improve the equipment procurement management system, and advance the universalization of military and civilian standards. Strengthen the submission of military requirements for national defense development and military-civilian coordination, ensure that major infrastructure fully incorporates national defense requirements, strengthen national defense strategic pre-positioning, and improve the protection of important targets. Uphold military-civilian integration and the integration of peacetime and wartime, accelerate the building of national defense mobilization capacity, strengthen reserve force development, coordinate the national defense mobilization and emergency management systems, and deepen the joint development and sharing of forces and personnel, important facilities and general-purpose equipment. Strengthen the development of modern border, coastal and air defense, and advance the joint efforts of Party, government, military, police and the people to strengthen border and coastal defense. Strengthen honor incentives and the protection of the rights and interests of service members and their families. Deepen national defense education for all and consolidate unity between the military and the government and between the military and the people.

PART 16

Developing Whole-Process People's Democracy and Improving the Socialist Legal System with Chinese Characteristics

China will unswervingly follow the path of socialist political development with Chinese characteristics, uphold the organic unity of Party leadership, the people running the country, and law-based governance, and consolidate and develop a lively, stable and united political situation.

CHAPTER 57

Developing Socialist Democracy

China will expand orderly political participation by the people, enrich democratic forms at all levels, and develop whole-process people's democracy that is more extensive, fuller and more sound, ensuring that the people conduct democratic election, consultation, decision-making, management and oversight in accordance with the law. The system of people's congresses will be upheld, improved and operated effectively; the system under which people's congresses oversee administrative, supervisory, judicial and procuratorial organs will be improved, ensuring that state organs exercise power and perform their duties in accordance with the law and that the people's democratic rights and legitimate interests are safeguarded and realized. The system of multiparty cooperation and political consultation under the leadership of the Communist Party of China will be upheld and improved; the CPPCC's role as a specialized consultative body will be given full play; coordination among various consultation channels will be strengthened; and consultative democracy will be advanced to develop extensively, at multiple levels and in

an institutionalized manner. Grassroots democracy will be improved; the people's right to manage grassroots public affairs and public welfare undertakings in accordance with the law will be safeguarded; and the democratic management system for enterprises and public institutions, with workers' congresses as the basic form, will be improved. Mechanisms for soliciting public opinion and pooling public wisdom will be improved. The role of people's organizations such as trade unions, the Communist Youth League and the Women's Federation will be better leveraged, and policy support will be strengthened for building the industrial workforce and for the development of young people, women and children. The all-round development of human rights will be promoted. The broad united front work pattern will be improved, and the broadest possible patriotic united front will be consolidated and developed. A strong sense of community for the Chinese nation will be forged, and the building of the Chinese national community will be advanced. The principle that religions in China must be Chinese in orientation will be upheld, and law-based governance of religious affairs will be strengthened. The Party's policies on overseas Chinese affairs will be fully implemented, the hearts and strengths of overseas Chinese will be better rallied, and the role of bonds such as clan ties, hometown ties and ancestral culture will be brought into play.

CHAPTER 58

Advancing Law-Based Governance in All Respects

China will uphold law-based governance in all respects and make coordinated progress in scientific legislation, strict law enforcement, impartial administration of justice and observance of the law by all, so that the rule of law better plays its role in consolidating the foundations, stabilizing expectations and securing the long term and a socialist country under the rule of law is built to a higher standard. The implementation and oversight of the Constitution and laws will be strengthened, and the systems and mechanisms for safeguarding the uniformity of the country's rule of law will be improved. Legislative planning and legislative review will be strengthened, channels and ways for the public to participate in legislation will be broadened, the quality of legislation will be improved, and the formulation and revision of laws and regulations in fields such as finance and tendering and bidding will be accelerated. The building of a law-based government will be stepped up, the recording and review of administrative normative documents will be fully implemented, and mechanisms for the substantive resolution of administrative disputes will be improved. Law enforcement will be intensified in key areas that bear on the immediate interests of the people, and cross-departmental coordination and oversight of law enforcement and the administration of justice will be strengthened. The exercise of judicial power will be regulated, mechanisms for realizing and evaluating judicial fairness will be improved, and the fairness, stability and authority of judicial rulings will be enhanced. Personal rights, property rights and personality rights will be protected in accordance with the law. Procuratorial oversight will be strengthened, and public interest litigation will be advanced. The national enforcement system will be improved, and the problem of difficulty in enforcing court judgments will be effectively resolved. The development of the foreign-related legal system and capacity will be accelerated, mechanisms for international commercial mediation, arbitration and litigation will be improved, and the International Organization for Mediation will be supported in playing a better role. Oversight and inspection of leading officials in handling matters in accordance with the law will be strengthened, and the working mechanism for comprehensive evaluation of law-based governance will be improved. The building of a law-based society will be further advanced; the ranks of lawyers and other legal service providers will be expanded at a faster pace; inclusive public legal services will be improved; publicity and education on the rule of law will be strengthened; and a sound environment will be fostered in which the whole of society respects the rule of law, abides by rules, honors contracts and upholds justice.

PART 17

Upholding and Improving "One Country, Two Systems" and Advancing National Reunification

China will unswervingly safeguard and promote the long-term prosperity and stability of Hong Kong and Macao, unswervingly advance the great cause of national reunification, and join hands to create a great undertaking of national rejuvenation.

CHAPTER 59

Promoting the Long-Term Prosperity and Stability of Hong Kong and Macao

China will unswervingly implement the policy of "One Country, Two Systems", "Hong Kong people governing Hong Kong", "Macao people governing Macao" and a high degree of autonomy, apply the principles of "patriots administering Hong Kong" and "patriots administering Macao", improve the effectiveness of law-based governance in Hong Kong and Macao, promote their economic and social development, and give full play to their unique strengths and important role as regions backed by the motherland and connected to the world.

Section 1 Supporting Hong Kong and Macao in Consolidating and Enhancing Their Competitive Advantages

China will support Hong Kong in consolidating and enhancing its status as an international financial, shipping and trade center and an international aviation hub, strengthening its functions as a global hub for offshore RMB business, an international asset and wealth management center and an international risk management center, and building

a commodity trading ecosystem and a high value-added supply chain services center. It will support Hong Kong in building an international innovation and technology center, in deepening the development of a center for international legal and dispute resolution services, a regional intellectual property trading center and a center for cultural and artistic exchanges between China and other countries, and in accelerating the building of the Northern Metropolis. It will support Macao in pursuing appropriate economic diversification and in deepening its development as a world center of tourism and leisure, a commercial and trade cooperation service platform between China and Portuguese-speaking countries, and a base for exchange and cooperation where Chinese culture is the mainstream and diverse cultures coexist, and in enhancing the competitiveness of industries such as traditional Chinese medicine and health, specialized finance, high technology, and conventions, exhibitions and trade. It will also support Hong Kong and Macao in creating a high ground for attracting high-caliber talent from around the world.

Section 2 Supporting Hong Kong and Macao in Better Integrating into and Serving the Country’s Overall Development

Cooperation between Hong Kong and Macao and the mainland in the economic, trade, scientific and technological, cultural and people-to-people fields will be strengthened, and policies and measures will be improved to facilitate the development and daily life of Hong Kong and Macao residents on the mainland. Connectivity between their financial markets and those of the mainland will be advanced in an orderly manner, and collaborative innovation with the mainland among enterprises, universities and research institutes will be deepened. Guangdong-Hong Kong-Macao cooperation will be deepened; sustained efforts will be made to achieve breakthroughs in cooperation in key areas; the coordinated development of ports, airports and rail transit will be promoted; the Guangzhou-Zhuhai (Macao) high-speed railway will be built; and preliminary work on the Hong Kong-Shenzhen Western Railway will be advanced. The integrated development of Hengqin and Macao will be deepened, and major cooperation platforms such as Qianhai, Nansha and Hetao will be built to a high standard. The Hengqin forward cargo station of Macao International Airport will be built, the construction of the Macao-Hengqin International Education (University) City will be advanced, and Macao higher education institutions will be supported in extending their operations to Hengqin. Mechanisms for Hong Kong and Macao to better play their role in China’s opening up will be improved; Hong Kong and Macao will be supported in deeply participating in high-quality Belt and Road cooperation and in leveraging their strengths in professional services to help enterprises “go global”; and Hong Kong and Macao will play their important role as a window for exchanges and mutual learning between Chinese and Western civilizations.

CHAPTER 60

Promoting the Peaceful Development of Cross-Strait Relations and Advancing the Great Cause of National Reunification

China will thoroughly implement the Party's overall policy for resolving the Taiwan question in the new era, uphold the one-China principle and the 1992 Consensus, resolutely strike at "Taiwan independence" separatist forces, oppose interference by external forces, maintain peace and stability in the Taiwan Strait, firmly grasp the initiative and dominance in cross-Strait relations, improve the wellbeing of compatriots on both sides of the Taiwan Strait, and firmly safeguard the common homeland of the Chinese nation.

Section 1 Promoting Cross-Strait Economic Cooperation

China will continue to introduce and implement policies and measures that benefit Taiwan compatriots and Taiwan-funded enterprises, and guide them in actively integrating into and contributing to the building of a new development paradigm. Taiwan-funded enterprises will be supported in putting down roots and developing on the mainland, and in participating in national regional development strategies and Belt and Road cooperation; industrial cooperation will be strengthened to build a cross-Strait common market. It will support Fujian in building, to a high standard, a demonstration zone for cross-Strait integrated development, and advance the building of key cross-Strait cooperation platforms such as Pingtan, Kunshan and Dongguan and of cross-Strait industrial cooperation zones. It will also support the development of a multi-tiered cross-Strait financial market and encourage qualified Taiwan-funded enterprises to list on the mainland.

Section 2 Deepening Cross-Strait Exchanges

The systems and policies for promoting cross-Strait economic and cultural exchanges and cooperation will be improved, personnel exchanges across the Strait will be expanded, and exchanges, interactions and integration between the two sides will be promoted. Cooperation between the two sides in education, healthcare and other fields will be deepened, and social security and public resources will be shared. Cultural exchanges across the Strait will be promoted, Chinese culture will be jointly carried forward and promoted, and Taiwan compatriots' identification with the Chinese nation, with Chinese culture and with the country will be enhanced. Exchanges between young people and at the grassroots level will be strengthened, and better conditions will continue to be created for young people from Taiwan to pursue, build and realize their dreams on the mainland. The policy of according Taiwan compatriots equal treatment will be implemented, and better conditions will be created for Taiwan compatriots studying, working and living on the mainland. China will unite with the broad masses of Taiwan compatriots to create enduring wellbeing for the Chinese nation.

PART 18

Strengthening Guarantees for Plan Implementation

China will uphold and strengthen the Party's overall leadership, persevere in advancing full and rigorous Party self-governance, enhance the Party's political leadership, ideological guidance, organizational strength and social appeal, improve the Party's ability and level in leading economic and social development, and improve the institutional system for national economic and social development planning, thereby gathering a mighty force for advancing Chinese modernization.

CHAPTER 61

Upholding and Strengthening the Centralized, Unified Leadership of the Party Central Committee

China will resolutely safeguard the authority and centralized, unified leadership of the Party Central Committee, give full play to the Party's role as the core of leadership in exercising overall leadership and coordinating the efforts of all sides, and provide a fundamental guarantee for advancing plan implementation.

Section 1 Strengthening the Party's Leadership over the Whole Process of Plan Implementation

China will thoroughly study and implement Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, and continue to use the Party's innovative theory to unify thinking, will and action. The mechanisms for implementing the major decisions and plans of the Party Central Committee will be improved, overall coordination, guidance and promotion of plan implementation will be strengthened, a work pattern of plan implementation featuring clear division of responsibilities, coordinated action and ex-

tensive participation will be formed, and smooth connection between higher and lower levels and effective implementation will be ensured. Democratic centralism will be improved and implemented, and scientific, democratic and law-based decision-making will be upheld. In-depth efforts will be made to tackle pointless formalities and ease the burden on grassroots levels. Requests for instructions and reports will be promptly submitted to the Party Central Committee concerning the mid-term and final evaluations of the Plan and major issues in implementation, and all regions and departments shall report to the Party Central Committee on the implementation of the Plan's objectives and tasks as an important part of their work. The building of primary-level Party organizations in all fields will be advanced in a coordinated manner, the political and organizational functions of Party organizations will be enhanced, and Party members will play their vanguard and exemplary role. The policy of respecting work, respecting knowledge, respecting talent and respecting creativity will be implemented, the vitality of the whole of society in taking action, starting businesses, innovating and creating will be stimulated, and a lively situation will be created in which everyone's talent is fully applied, all abilities are put to the best use, and the whole nation works with one heart and advances with united efforts.

Section 2 Comprehensively Enhancing the Modernization Capabilities of the Contingent of Officials

A correct approach to selecting and appointing officials will be upheld, political criteria will be put first, and leading bodies and the contingent of officials will be built strong. Officials at all levels will be educated and guided to establish and practice a correct view of political performance, proceed from reality and act in accordance with objective laws, consciously deliver achievements for the people and through solid work, promote high-quality and sustainable development with a correct view of political performance, and respond to the people's new requirements and expectations with real results. The differentiated assessment and evaluation system will be improved, making assessment more targeted and scientific. Education, training and practical exercise will be strengthened to enhance the modernization capabilities of officials. Strict management will be combined with genuine care, and incentives with constraints, so as to stimulate the internal motivation and overall vitality of the contingent of officials.

Section 3 Improving the Party and State Oversight System

Full and rigorous Party self-governance will be advanced to higher standards and with more solid measures; an oversight system featuring unified Party leadership, full coverage, and authority and efficiency will be improved; the allocation and operation of power will be better regulated and supervised; institutional mechanisms that integrate the authorization, exercise and restraint of power and are clear, transparent and traceable will be improved; the enforcement of laws and regulations will be strengthened; and a clean and upright political ecosystem will be fostered. The political responsibility for full and rigorous Party self-governance will be strengthened, political oversight will be made more specific, targeted and routine, and the role of political inspection as a sharp sword

will be brought into play. Persistent efforts will be made to implement the spirit of the Central Committee's eight-point decision on improving Party and government conduct, all kinds of unhealthy tendencies will be resolutely curbed, and efforts to improve Party conduct will be made routine and lasting. A clear and firm stance that anti-corruption is always an ongoing endeavor will be maintained, coordinated efforts will be made to ensure that officials dare not, cannot and do not want to engage in corruption, the soil and conditions that breed corruption will be eliminated, the tough battle, protracted battle and overall battle against corruption will be resolutely fought and won, and the path of anti-corruption with Chinese characteristics will be unswervingly followed. Serious action will be taken to investigate and deal with the problem of collusion between officials and businesspeople that damages the political ecosystem and the environment for economic development; corruption in fields where power is concentrated, funds are intensive and resources are abundant will be strictly investigated; new and hidden forms of corruption will be effectively prevented and addressed; and efforts will continue to be deepened to rectify misconduct and corruption around the people. Oversight of "top officials", other members of the "key few" and other key groups such as young officials will be strengthened, and the practice of investigating both those who take bribes and those who give bribes will be deepened. National anti-corruption legislation will be advanced. With intra-Party oversight taking the lead, all forms of oversight will be promoted in a coordinated and interconnected way, and cooperation and coordination mechanisms between discipline inspection and supervision and audit oversight, fiscal and accounting oversight, statistical oversight and other forms of oversight will be deepened and expanded. International anti-corruption cooperation will be strengthened, mechanisms for repatriating fugitives, preventing their escape and recovering illicit assets will be built in an integrated way, and efforts to address cross-border corruption will be intensified. Reform of the discipline inspection and supervision system will be deepened, and discipline inspection and supervision will be made more standardized, law-based and regularized.

CHAPTER 62

Improving the Full-Cycle Mechanism for Plan Implementation

China will implement the National Development Planning Law, improve the unified planning system, fully mobilize the enthusiasm, initiative and creativity of the whole of society, advance the implementation of all objectives and tasks vigorously and in an orderly manner, and ensure that the decisions and plans of the Party Central Committee are fully implemented.

Section 1 Forging Synergy in a Unified Planning System

A national planning system that is accurately positioned, clearly bounded, functionally complementary and uniformly connected will be established and improved, providing effective support for the implementation of the national development plan. In accordance with the national development plan, a number of national-level key special plans and national-level regional implementation programs will be deployed, formulated and implemented in step. The formulation of plans at all levels and of all types will be coordinated: the number of plans will be reduced, their quality improved, and linkages and coordination among plans strengthened, so as to prevent excessive, indiscriminate and ineffective planning. Procedures for linking plans and submitting them for approval will be standardized; plans submitted to the Party Central Committee and the State Council for approval must be linked with the national development plan through the development and reform department of the State Council; and provincial-level development plans must, in accordance with procedures, be submitted to the development and reform department of the State Council for linkage, with implementation duly ensured. Provincial-level governments will strengthen their guidance on the formulation of city and county plans, ensuring that the layout of major industries, major infrastructure and other areas conforms to national strategic priorities. Annual plans will implement all the tasks of the Plan on a rolling basis; the main indicators of the Plan will be broken down and incorporated into the annual plan indicator system, with comprehensive balance maintained from year to year. The supporting laws, regulations and policies for the National Development Planning Law will be improved, standardized management of national-level special plans will be strengthened, and local governments will be encouraged to formulate development planning regulations for their own regions in light of actual conditions.

Section 2 Advancing the Implementation of Plan Tasks by Category

China will establish and improve the plan implementation mechanism and clarify the division of responsibilities for objectives and tasks. All regions and departments shall formulate specific, actionable and assessable work arrangements and measures for implementation. For binding indicators, and for tasks such as public services, ecological and environmental protection and security guarantees, responsibility will be more effectively decomposed and fulfilled; for anticipatory indicators, and for tasks such as industrial development and structural adjustment, implementation will be advanced by creating a sound policy environment, institutional environment and law-based environment. The list of major engineering projects will be refined, and individual projects and bundled projects will be implemented by category; for projects for which preliminary work will be carried out during the 15th Five-Year Plan period, construction will be launched through prescribed procedures where conditions are ripe.

Section 3 Strengthening Coordinated Policy Support

Focusing on the implementation of the national development plan, mechanisms for policy coordination and work synergy will be improved. The national development plan will be taken as an important basis for assessing the consistency of the orientation of macro policies, ensuring that the direction in which all policies are applied conforms to the requirements of the national development plan. The financial guarantee provided by the medium-term fiscal plan and annual budget arrangements for plan implementation will be strengthened, and central government funds will be channeled first to the major strategic tasks, major policy measures and major engineering projects identified in the Plan. Financial policies will actively support the key development areas identified in the Plan. The principles that projects follow the plan, that funds and production factors follow projects, and that oversight follows projects and funds will be upheld; the approval and verification of major engineering projects identified in the Plan will be accelerated; priority will be given to meeting the needs of site selection, land and sea use and funding; and the land and other production factor needs of individual major engineering projects will be guaranteed by the state in a unified manner. Oversight of major engineering projects will be strengthened on an accompanying and look-through basis, and whole-process, full-cycle safety management will be strengthened.

Section 4 Strengthening Monitoring, Evaluation and Oversight of Plan Implementation

Dynamic monitoring, mid-term evaluation and final evaluation of plan implementation will be carried out; tracking of the situation and analysis of risks will be strengthened; and, on the basis of monitoring and evaluation, policy measures to strengthen and improve plan implementation will be promptly proposed. After approval by the Party Central Committee, the mid-term evaluation will, in accordance with the law, be reported to the NPC Standing Committee, and the final evaluation report will, in accordance with the law, be submitted to the National People's Congress, so as to consciously accept oversight by people's congresses. If evaluation shows that adjustments to this Plan are truly necessary, the State Council will put forward an adjustment plan and, after it is approved by the Party Central Committee, submit it to the NPC Standing Committee for review and approval. Improving the Party and state oversight system will be integrated into plan implementation; discipline inspection and supervision organs and audit organs will play their oversight role in plan implementation; and a coordinated oversight mechanism for the implementation of major cross-regional and cross-departmental tasks will be improved. Plan implementation will be made public in a timely manner and open to oversight by all sectors of society.
